CD-ROM

POWER CD-ROM

The Power CD-ROM for the Amiga 600/1200 plugs directly into the PCMCIA port and provides a direct SCSI-I and SCSI-II interface, allowing up to six additional devices to be connected. What's more the Power CD-ROM features a 'Hot-plug' which allows you to connect and disconnect the CD-ROM and any other additional devices even when the Amiga is switched on.

The CD-ROM drive comes with a SCSI interface, PSU, manual, audio lead, mains lead and software which includes Audio CD, CD32 Emulator, MPEG Film Decoder and Photo CD.

CLOCK CARTRIDGE

Our unique and highly rated external Clock Cartridge will enable your Amiga to continually store the correct time and date in its own battery backed memory. Simply plugs onto the back of the Amiga and does not invalidate the warranty.

Compatible with ALL Amigas

ONLY £19.99
(plus £1.00 postage and packing)

MEMORY EXPANSIONS

A1200 trapdoor fitting memory expansions feature a battery backed clock and a socket for an accelerator FPU.

2mb £99.99
4mb £149.99
8mb £259.99

**NEARLY
DOUBLES THE
SPEED OF
THE A1200**

A500 & A500+ HARD DRIVES

These hard drives simply push onto the side of the A500 or A500+ and will give your computer all the benefits that hard drives offer. The drives are supplied formatted, partitioned and have Workbench installed for immediate use.

Full instructions and software supplied.

The hard drive also has the facility to add 2, 4, 6 or 8mb of RAM inside it.

A500/+ 250mb HARD DRIVE £209.99
Additional RAM for the hard drive **£89.99** per 2mb

DATAFLYER SCSI+

Now includes CD ROM drivers and instructions.

The Dataflyer is a 16bit SCSI II controller card that converts the signals on the internal IDE interface to also run SCSI devices at the same time as the IDE hard drive.

The Dataflyer SCSI+ will operate up to 5 SCSI devices such as CD ROMs, hard drives, SyQuest removable drives, tape back up drives etc.

Unlike other SCSI interfaces, the Dataflyer SCSI+ is compatible with all known accelerators etc and it does not stop you from utilising any of the important expansion ports on your A1200/A600.

The Dataflyer SCSI+ easily installs into the A1200/A600 (simply pushes in, no need to remove the metal shield) and provides a 25 way D connector through the blanking plate at the back of the A1200.

Full instructions and software supplied.

DATAFLYER SCSI+ ONLY £69.99

SQUIRREL SCSI INTERFACE
ALSO AVAILABLE £59.99
PCMCIA fitting SCSI interface

DISCOLOGY

Discology is the ultimate in disk copying power for the Amiga. The package comprises the Discology Disk, manual and Discology cartridge for making copies of heavily protected programs with an external disk drive. Discology will also format disks, check disks for errors etc.

PLEASE PHONE FOR A FULL INFORMATION SHEET

**AMAZING

EZ DRIVES

Incredibly fast (up to 4x faster than a ZIP drive) SCSI drive will store a massive 135mb per cartridge. Comes complete with power supply, SCSI cable, instructions and cartridge.

THE ULTIMATE REMOVABLE DRIVE

ONLY £234.99
or £274.99 with a Squirrel or Dataflyer
135mb EZ cartridge £15.99

**NEW FOR
1996**

SIMMS AND FPUS

72 pin SIMMS suitable for Apollo accelerators, A4000, A1200 memory expansions etc.

1mb £39.99
2mb £77.99
4mb £114.99
8mb £219.99

33MHz 68882 FPU (plcc) £49.99
40MHz 68882 FPU (plcc) £69.99
50MHz 68882 FPU (PGA) £79.99
All FPU's are supplied with crystal oscillators

**NEW FOR
1996**

**DATAFLYER 4000SX
ONLY £94.99**

DATA FLYER 4000SX

A4000 SCSI controller expansion card that allows up to 7 SCSI devices to be connected to the A4000. Includes full user manual and installation software including CD ROM drivers. Includes connecting cable for internal SCSI devices and rear mounting bracket with a 25way connector for external devices.

**NEW FOR
1996**

ZIP DRIVES

Highly rated SCSI drive will store 100mb per cartridge. Comes complete with power supply, SCSI cable, instructions and cartridge.

ONLY £189.99
or £229.99 with a Squirrel or Dataflyer
100mb ZIP cartridge £15.99

ASIM CDFS 3.0

This superb package is a must for any CD ROM user. Includes CD32 & CDTV emulation, audio CD player software including librarian features, direct reading of 16bit audio samples, full support for Kodak and Corel PhotoCD Discs. Includes the 'FISHMARKET' CD ROM disk packed with public domain Fred Fish disks and a huge 115 page information packed spiral bound manual.

**ASIM CDFS
ONLY £49.99**

SPEEDCOM MODEMS

Our highly rated, top quality feature packed modems are ideal for Amiga users. All modems include our **FREE ROMM ACCESSORIES PACK** worth **£19.99** which includes a cable to connect the modem to the Amiga, NCOMM comms software, Amiga Guide to Comms and a list of Bulletin Boards from which you will be able to download vast amounts of free software as well as have access to E-MAIL facilities.

- MNP 2-4 Error Correction
- MNP 5 Data Compression
- Fax Class I and II compatible, Group 3
- Hayes Compatible
- Full 80 page manual
- 12 Months guarantee

SPEEDCOM+B
(14,400 V32bis) **£79.99**
SPEEDCOM+BF
(28,800 V34) **£159.99**

NEW LOWER PRICES

2.5" HARD DRIVES

Our high speed 2.5" IDE hard drives for the Amiga A1200 & A600 computers come complete with fitting cable, screws, partitioning software, full instructions and 12 months guarantee. All drives supplied by us are formatted, partitioned and have Workbench (WB2 for the A600 and WB3 for the A1200) installed for immediate use. Fitting is incredibly simple; if you can plug the mouse into the mouse socket, you will be able to plug the hard drive into the hard drive socket.

Contents

ISSUE 83 APRIL 1996

AF SERIOUS

63 Introduction
Graeme Sandiford talks us through what's on offer in the serious pages.

64 Canon BJC-610
The latest Bubblejet printer from Canon allows you the quality of laser printing at an affordable price.

66 Macro Form
Modelling in *Lightwave* has been made much easier. Graeme Sandiford looks at Macro Form and its modelling tools.

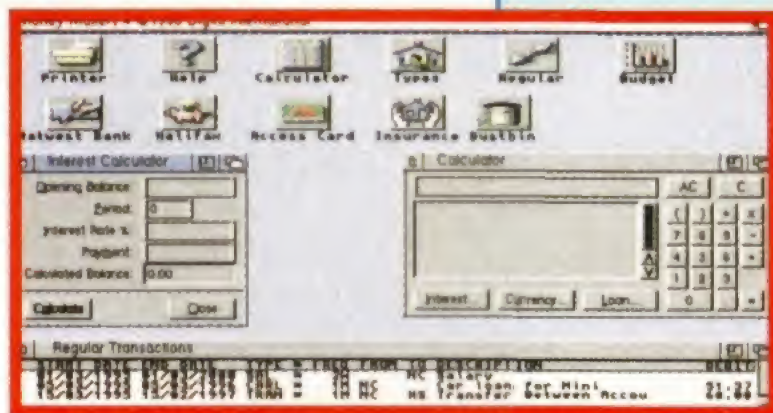

68 Wordworth 5
Final Writer may be facing fierce competition with the release of the latest word pro from Digita. David Taylor takes a look at *Wordworth 5's* new features and decides whether it was really worth waiting for.

73 Model Monger
Over 250 household objects - all in 3D. This ready-made cappuccino machine is only one of the many everyday household items. It's a dream come true for all you 3D modellers.

74 Light Speed
It's never been seen in the pages of *Amiga Format* before. A review of another mag! And not just any old mag but a mag on video.

76 Money Matters & Counting House 4
These two accounting programs battle it out for the title of Best Money Manager. Graeme Sandiford referees.

79 HD Floppy
Graeme Sandiford was completely won over by this small, simple and sexy little machine. He liked it so much he's still got it stick on his machine at home!

81 CD-ROM
A looks at the latest CD-ROMS. Graeme Sandiford recommends what to buy and what not.

AF CREATIVE

91 Video
Steve McGill introduces his second video feature. Editing may look hard but with the right advice and the right equipment even Jeremy Beadle can do it.

100 Final Writer
There's still chance to get a copy of last months Coverdisk and Nick Veitch will show you how to use it. This month he shows you how to create the master page.

102 Real 3D
John Kennedy introduces another *Real 3D* tutorial. Learn how to render perfect goblets, lava lamps and wine glasses or alternatively you can re-create your very own copy of *Amiga Format!*

105 Blitz Basic
Get on the World Wide Web. John Kennedy continues his series of tutorials on *Blitz Basic* and begins teaching you how to create your very own Web browser.

AF REGULARS

9 Month In View
Nick Veitch picks out what's caught his eye this issue.

85 Workbench
Whatever your problem, Graeme Sandiford is on hand to try and help.

88 Amiga.net
Darren Irvine takes a look at the current crop of Amiga Web browsers.

108 Letters
Whether you want to make a complaint or congratulate us, don't hesitate to put pen to paper. Nick Veitch will be only too happy to give you a reply. You might even win an AF sweatshirt.

AF SCREENPLAY

Watchtower: An old style shoot-em-up.

Star Crusader: Wing Commander all over again.

Premier Manager 3 Deluxe: Telford Utd v Romford.

Super Street Fighter 2 Turbo: All the familiar guys and gals.

Thomas the Tank Engine: plays Pinball on the CD³²

31 Previews
A specially extended preview devoted to the latest offering from Team 17 - *Alien Breed 3D II*.

35 Charts
Sensi Soccer is top of the charts again. Who's racing up behind?

36 Watchtower
A *Chaos Engine* clone from OTM gives *Steve McGill* the chance to get all philosophical.

40 Star Crusader
David Taylor takes off on a mission to destroy peaceful civilisations, or will he be persuaded to fight the good fight?

42 Re-releases
Steve Bradley plays at being a soccer manager in this Deluxe version of *Premier Manager 3*.

46 Super Street Fighter 2 Turbo
It's hailed as the ultimate beat-em-up. *Graeme Sandiford* dons his gloves and reviews the latest version of this arcade classic.

51 CD³² Check
It's the kid's favourite. *Thomas the Tank*, *Percy* and *Toby* try their hand at pinball.

53 Gamebusters
Hints, cheats and tips on games including *Zeewolf 2* and *Breathless*.

57 Public Domain
Horror stories and comics from the Public Domain and the 40k intros from *The Party 5*.

Coverdisks

Coverdisk A: ScapeMaker

A collection of useful programs including *ScapeMaker*, a *Breathless* update that replaces the entire 3D engine and *Fiasco 1.1* an excellent program that enables you to set-up and design your own database.

p116

Coverdisk B: Alien Bash II

An eight level playable colossus that pays homage to the mighty *Chaos Engine*. Rescue prisoners, kill baddies, save money and become the all round good guy that you always knew you weren't.

p114

Pinball Prelude

Pinball

RIFFAST

SO YOU WANNA BE BIG (THIS SUMMER?)

NEW! NOW INCLUDES VIDEO!

Do you want an attractive, muscular body? Have you noticed the 90's woman's preoccupation with guys with sculpted physiques? Have you noticed the rise and rise of Chippendale, Versace Models, muscular actors etc? Would you too like to build an attractive, hard, muscular physique? If not, stop reading, if you do here is the way.

Building a good physique is not easy. You may have wasted money on manuals, on joining 'keep fit' gyms with clueless, self-centred instructors, spent a fortune on magazines learning the 'ways' of the 'champs', sent off for expensive 'no weights required' gimmicks. You may have wasted all this money and still had zero results and then gotten bored and stopped! We don't blame you, 99% of our clients went through all this themselves until they discovered the RIFFAST muscle building programme, based on the very latest American scientific concepts. This explosive new system is 100% natural requiring only 4 x 30 minute sessions a week from the privacy of your own home. It gives fast and phenomenal muscle growth in just 6 weeks, yes, 6 weeks! By Week 6, gains are even greater. Riffast is ideal for 'hard gainers', as well as people who are already fairly muscular in build.

The system can be used to whatever degree of muscularity, mass or fitness required. It is 100% natural, absolutely NO drugs, powders or fancy equipment is involved. The package contains a full instructional PROGRAM with COMPREHENSIVE MANUAL giving full details on this explosive system. And now, NEW FOR '96, also included is the exclusive RIFFAST "CRITICAL MASS" (VHS) INSTRUCTIONAL VIDEO-CASSETTE. This fantastic new video really makes the difference. And the complete package unbelievably simple to use. Price is only £22 + £3 postage, packing and handling for a phenomenal system that really does work. Compare the price with that you have spent or maybe will spend! We promise that you will be 100% delighted with the results! Please bear in mind that unlike many gimmicky "guaranteed" muscle courses, this is a ONE OFF PAYMENT that will benefit you FOR LIFE.

The Riffast system is suitable for all persons aged 12 and over.

These ecstatic user reports confirm its phenomenal success:

- "I can't believe the silly things I was doing before I started RIFFAST. These results are phenomenal. I've never seen anything like it!" F.R., Leica
- "I feel so strong. I look fantastic, how can anyone not use RIFFAST?" E.W., New York, USA.
- "My friends can't believe my amazing bodybuilding success, in just 6 weeks my confidence has increased tenfold! Thanks!" J.K., Chorley
- "My girlfriend's wondering what I'm on! She can't keep her hands off me! Thanks a million!" S.S., Notts
- "It's fast! After years of wasted money and cash, RIFFAST has given me the results I craved." Mr. S.B., Wales.
- "I used to be tall and skinny. Having wasted so much time and energy in the gym I almost gave up. RIFFAST has given me devastatingly handsome results." O.M., Glasgow, Scotland.
- "This programme is the most effective I've ever tried." A. Omar, Karachi, Pakistan.
- "In a few weeks, RIFFAST has transformed my life!" I. Ben, Toronto, Canada.
- "I can wholeheartedly recommend it to anyone!" J. Jinnah, Sophiatown, S. Africa.

ADD FOUR DELIGHTFUL COMMENTS TO THE LIST USE THE RIFFAST SYSTEM AND TRANSFORM YOUR PHYSIQUE TODAY!

Why RIFFAST? Thousands of delighted users worldwide can't be wrong! Use RIFFAST - one of the most powerful, effective, yet 100% natural muscle building systems ever devised! Apply this scientifically proven system to completely remove fat and pack on muscle, or to just gain phenomenal muscular mass quickly and safely. Make up for all the time wasted in the past - YOU HAVE NOTHING TO LOSE!

DON'T MISS THIS OPPORTUNITY FOR BUILDING A POWER-PACKED BODY. ORDER TODAY. FREE GIFT!

Order within 30 days of the cover date of this magazine and you will receive the phenomenal RIFFAST ABDOMINAL DEFINITION PROGRAM: "ABSOLUTE DEFINITION" (currently retailing at £14.99) - ABSOLUTELY FREE! This amazing new program blows away common myths - e.g. Sit-ups for ABS! Sit-ups actually do much more damage than good! After reading "ABSOLUTE DEFINITION" you can have rock hard "washboard" ABS in a few weeks! - All this FREE, take advantage - ORDER TODAY!

ORDER FAST AND CLAIM YOUR FREE GIFT

Yes! I want results FAST. And I want to transform my physique the RIFFAST way

Please send me Riffast pack(s) which includes the RIFFAST (VHS) INSTRUCTIONAL VIDEO-CASSETTE, an instructional PROGRAM and complete MANUAL - only £22 + £3 postage, packing and handling (overseas add £3 more + £30) I enclose Cheque/P.O. payable to RIFFAST for £.

Tick as appropriate I am enclosing CASH please despatch my order within 3 days. I am ordering fast please also enclose my FREE GIFT

YOUR GUARANTEE OF VALUE

This magazine comes from Future Publishing, a company founded just ten years ago but now selling more computer magazines than any other in Britain. We offer:

- BETTER ADVICE.** Our titles are packed with tips, suggestions and explanatory features, written by the very best in the business.
- STRONGER REVIEWS.** We have a cast-iron policy of editorial independence and our reviews give clear buying recommendations.
- CLEARER DESIGN.** You need solid information fast. So our designers highlight key elements by using charts, diagrams, summary boxes, and so on...
- GREATER RELEVANCE.** At Future, Editors operate under two golden rules:
 - Understand your readers' needs.
 - Then satisfy them.
- MORE READER INTERACTION.** We draw on readers' contributions, resulting in the liveliest letters pages and the best reader tips. Buying one of our magazines is like joining a nationwide user group.
- BETTER VALUE FOR MONEY.** More pages, better quality - magazines you can trust.

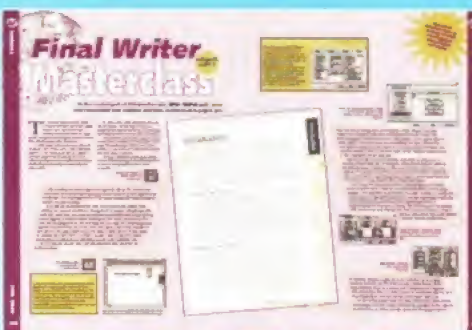

Printed in the UK.
 All contributions submitted to Amiga Format are submitted and published on the basis of full assignment of copyright to Future Publishing, unless otherwise agreed in advance.
 © Future Publishing Limited, 1996.

The second feature for our resident Final Writer
 Comedok, p199

It looks good, and there's not just the layout. Some means imitate can you fit in a CD? p199

A high density drive which requires no software patches is surely a thing of wonder. p19

A valiant effort from O'Reilly, they tried anyway. p20

The latest incarnation of the Web browser. p20

Canon continue their sterling support for the Amiga with a new colour Sublimet. p20

There's a lot of it about. We Irvine has done a fine job in mounting up web-browser's past, present and future. p20

Month In View

A slightly diminished Nick Veitch puts forward his manifesto for the next 28 days of the Amiga ...

Sometimes it can be very surprising being the editor of *Amiga Format*. In the daily papers and even the trade magazines, the computer market is all Playstation this, Nintendo that, Windows '95 the other. Oh well, I may as well pack up shop now then. Shouldn't need to bother about coming in to create the magazine if there's nothing to write about.

But hold on there. If that's true then how come the best-selling game on the all-format charts is *Sensible World of Soccer*? How come Team 17 are working very hard on what could

possibly be the best Amiga game ever (see Previews, page 31). How come poor old Graeme Sandiford has been working all hours of the day and night to review all the applications software and CD-ROMs that have poured in over the last month. It may well be that the Amiga is owned by a company which doesn't really seem to know what to do with it - but hasn't that always been the case.

Far from advocating sticking your head in the sand, I suggest you stick your head in *AF* this month and see what great things there are in store for you.

All on one CD for just £49.95 !!!

Beef Up Your Sound !

The Little Gem Micro Mixer ! This 2 channel, stereo mixer features independent Hi and Lo EQ, panning, and volume for each channel. Little Gem greatly enhances all your sound input and output - samples, Mod files, even games - it's ideal for desktop video and music, and it's a great price too !

Little Gem £66.95

Run PC Software on your Amiga !

PC Task 3.1 allows you to run software designed for IBM PCs and compatibles on you Amiga ! PC Task 3.1 emulates a 80286 based PC (including the FPU), so you can run Windows 3.1 and applications like Microsoft Word and Excel. It'll even run Wolfenstein 3D. On an AGA Amiga you can run SVGA screen modes, and for basic tasks it doesn't need stacks of Ram. If you just want to run Dos, PC Task will run quite happily in just 1Mb of Ram. If you want to run Windows, you still only need 6Mb ! PC Task gives you two computers for little more than the price of one !

PC Task 3.1 £59.95

Do you want an Amiga DTP package that doesn't need loads of memory, an accelerator and a hard drive ?

How about Pagestream 2.2 SE !

All of that famous Pagestream ease-of-use, and functionality all in one box for under fifty pounds ! Pagestream 2.2 SE takes DTP into a new dimension - one where you only need Workbench 1.3, 1.5Mb of Ram, and only one floppy drive. Just take a look at these features :

Typography
Pagestream 2.2 SE allows you to use Comugraphic, Intellifont, PostScript and DMF fonts, with all the standard DTP features including tracking, leading, paragraph indents, hyphenation and more !

Graphics
Pagestream 2.2 SE has a powerful toolbox with a good assortment of drawing and editing tools. You can import pictures and drawings from many other programmes and print them in full colour.

Fast Printing
Pagestream 2.2 SE comes with an assortment of printer drivers. Print at lightning speeds to PostScript and non PostScript printers including dot-matrix, inkjet and laser printers. You can even create colour separations !

Pagestream 2.2 SE £49.95

Disk problems ? Hard drive looking doubtful ? You need Ami-Back !

AMI-BACK The Ultimate Backup Utility

The Ultimate In Disk Backup For Only £29.95 !

Ami-Back is the solution of choice for all your data backup needs. Designed to be both powerful and flexible, Ami-Back gives you complete control over the backup process. There is no other Amiga backup program that can come even close to offering the features, ease of use, and reliability of Ami-Back. And yes, Ami-Back even supports Amax, Unix and MSDOS partitions, and DAT and tape drives !

When ordering don't forget to include the carriage charge ! Charges within the UK are £3.50 for first class post, which usually arrives the next day. Orders over £100 are sent registered post at £4.50. Next day courier service within the UK mainland & subject to availability is £6.00. Hardware is sent by Next Day Courier. Call for prices overseas, islands & Scottish Highlands.

You can pay by Credit Card (Visa, Mastercard, Access, Delta, Switch and American Express) - we only bill your card when we despatch the order, not before - or by Cheque : Please make cheques payable to Emerald Creative Technology Ltd.

All pricing includes VAT. We reserve the right to change prices - you will be informed of any change when ordering. Faulty goods will be replaced or repaired if returned within 30 days of purchase. Postage won't be refunded on returned goods. We will refund if we can't repair goods. It is the responsibility of the customer to check product compatibility with existing equipment before buying. E&OE

When discussing Amiga coders, RJ Mical (right) said "These mad-dog programmers... I would hire each one of them to join my company if I could." Send your Amiga demos to him now.

AMIGA FORMAT news

- Single platform dream nears reality p11
- The World of Amiga Show p12
- The Surfer Bundle - others follow p13
- Fresh interface for multimedia package p14

Dawn of a New Development Program Will we see a unified platform strategy?

With the approach of the new millennium promising to herald a new dawn of open system hardware architecture, news reaches *Amiga Format* of a Sega rethink regarding their strategy on the struggling Saturn system and its place in the global entertainment hierarchy.

Sources suggest that Sega will change over from using the current Hitachi RISC chips powering their console to the PowerPC603. Regular readers of *Amiga Format* know that this is none other than the same chip vaunted for the new Power Amiga.

Industry analysts and forecasters hint that the move will bring Sega closer to a deal with Mutusushita and their M2 console technology; leaving Sega with more resources to spend on software development.

The single platform has long been the dream of software developers weary of the excessive costs levied on them by proprietary console manufacturers such as Nintendo, Sega, and Sony. The inhibitory cost of

converting prime titles to other platforms would also be significantly reduced.

The real power of the PowerPC range of chips lies in their ability to emulate other platforms operating systems. The repercussions for the interactive entertainment industry could be fundamental. Anything written on an Amiga that was Operating System (OS) legal, whether Power Amiga or not, could potentially run on any platform sporting a PowerPC chip; wiping out in a stroke many of the worries regarding where new talent is going to come from.

Of particular interest to all Amiga owners and coders will be the news that two of the main designers of the M2 technology, RJ Mical and Dave Morse, also happened to have been part of the 'big three' involved with the design

Could the proposed switch of Sega to use of the PowerPC chip herald a new era of less expensive software development across the board?

of the original Amiga.

RJ Mical is on record saying he wished that he could employ all of the Amiga coders and sceners still active on the scene; admiring their "wild eyed, wild haired, enthusiasm for the Amiga" and its related wares.

That PowerPC driven hardware could help affect a power shift away from hardware manufacturers and proprietary Operating System developers is beyond doubt. That such a shift could revolutionise development practice and costs is the most exciting consequence of this potential.

HOW FAST?

Good news for potential purchasers of *Alien Breed 3D II (The Killing Grounds)*.

In one of the most ambitious Amiga marketing moves yet seen, Ocean are currently working on a deal with an unknown accelerator manufacturer to bring cut price expansions to *Alien Breed 3D II* gamers.

At the time of going to press, the deal was around 70% complete. The accelerator type and specification is still to be announced. The discount on the boards could be as high as 50 per cent.

If other developers and manufacturers follow the Ocean/Team 17 lead, there could be interesting times ahead.

SCOOP!

Ocean's bold marketing move with Team 17 could have opened the flood gates.

"Your bank manager will love you for buying this program."

Graeme Sandiford stresses the benefits of *Money Matters 4*

PAGE 76

VirtuaScape can be used within Lightwave to produce 3D landscapes.

New Lightwave Plug-in from the UK

Kryonix design have almost finished work on a new utility for Lightwave called VirtuaScape. This plug-in will enable Lightwave-users to generate 3D landscapes from within Lightwave. According to the author the results that can be gained are as good as those from dedicated landscape programs.

Some of VirtuaScape's features include; control over environmental conditions like weather and lighting, shadow-casting clouds, trees and rocks, real-world scales and times of day. VirtuaScape should be available in April at a price of £54.99 and you can find out more or order a copy by writing to:
6 Kingsnorth Gardens, Folkestone, Kent, England, CT20 2QW.

The SX³² is here - thanks to Eyetechn.

SX32 COMES TO THE UK

The SX³² CD³² expansion module (see issue 82's Workbench and the Computer '95 show report in issue 80) has finally reached the UK market thanks to Eyetechn. For £199.99 Eyetechn will supply the unit along with a special Workbench 3 CD. The unit has several advantages over the rather disappointing SX-1 module not least of which is its superior engineering.

The SX³² features standard Amiga serial and ports, video and floppy disk connections. It also has a 15-pin VGA monitor output and allows the internal fitting of 2.5-inch hard disks and a 72-pin SIMM. The unit has been well-received by the German and Polish Amiga press and we'll be giving it a good going over soon. For more info contact Eyetechn on 01642 713 185.

SON OF The World of Amiga

The second World of Amiga show is set to take place on 13th and 14th of April. The show will be the first held by the Amiga's new-owners Amiga Technologies GmbH and they will be looking to reassure the industry and Amiga-owners of their commitment to the Amiga. It will be held at the Novotel Exhibition Centre in Hammersmith, London.

Amiga Tech. have promised a treat for all the family with various stands and activities including a Games Arcade, a Retail Area, a Presentation Theatre and competitions. Amiga developers and retailers will also be at the show with plenty of new products and bargains. You can expect to see:

- Power Computing
- Digita International
- Scala UK
- Hi Soft
- Gasteiner
- HiQ
- Siren Software
- Blittersoft.

We'll also be there along with our sister magazines *Amiga Shopper* and *Amiga Power*, so be sure to drop in and see us. Admission prices are £7 for adults and £5.50 for kids and tickets can be obtained by credit card by ringing the hot-line on 01369 706346.

FractalPro Image Library CD-ROM

...an absolute gem (VTU, Mar. 95, p. 61)

Hundreds of spectacular FractalPro images, Superb texture wrap image source. Images can be viewed on ANY Amiga with CD-ROM (PC and Mac too). Auto-slideshows too! List \$39.95 - mention this ad - only \$29.95

FractalPro v6.10 NEW! \$99.95

The ultimate Amiga fractal production tool got better - it makes Lightwave objects too! FractalPro has always been the best choice for fractal art and animation on the Amiga. Lots of fractal types and animation capabilities. Supports ECS, AGA, and 24-bit with super-fast fractal rendering. Requires 2.04 (or higher) math chip, 1mb RAM, Full PAL compatibility, of course, with many resolution options.

BONUS! FractalPro Image Library CD FREE

JobTracker v1.0 \$69.95

Track your project billing time and charges in real time. Easy graphic user interface for a database of clients and projects. Prints project session histories for billing records. Requires 2.04 (or higher).

RPaint v2.0 for AGA \$79.95

A paint program, ARexx graphics language (the graphics that ARexx always needed!) and a presentation tool - all in one. RPaint can even record your paint actions directly onto a usable 'script'. Supports NTSC and PAL resolutions on AGA systems. Requires AGA Amiga.

Distant Suns v5.01 CD-ROM NEW!

Over 1500 IFF images (planets, stars and more) - dozens of anims, 16 million-star Hubble catalog and the terrific Distant Suns planetarium all on CD-ROM. Displays in 16 colours (256-colours on AGA Amigas!). Needs 2.x+, 2mb HD.

List \$149.95 SPECIAL - MENTION THIS AD - \$119.95

NeuroPro Neural Network - req 2.x+ & math chip - £99.95

BarPro Bar Code Graphics & Printing - \$99.95

VistaPro 3.05 latest release - for power users - \$69.95

Vista Lite - requires only 2MB RAM and 2.x+ - \$24.95

Complete Amiga systems as well as many great buys on Amiga-related hardware items. Authorized Amiga dealer.

Ordering Information

Send International Money Order in \$US ONLY (add \$12 for air post to the UK or Europe) to MegageM - or - To order by credit card, contact our friends at Chaocity - Phone 805 925 7732 FAX 805 928 3128 MegageM Digital Media 1903 Adria Avenue, Santa Maria, CA 93454 805 349 1104 fax 922 5003. Visit MegageM on the World Wide Web! <http://www.fx.net/~megagem>

MegageM

ScapeMaker 4.0 Special Price Reader Offer

Scapemaker 4.0 has all the great features of the 3.02 version you received on this Amiga Format Coverdisk and two MAJOR NEW features:

Lightwave 3D Object Saver

You get a whole new capability to save Scapemaker 3D objects in NewTek's Lightwave 3D format. MegageM provides you with a second disk with 5 pre-configured LW 3D objects. If you place any of these prototype objects in your RAM: disk, ScapeMaker 4.0 will use it to create a LW 3D object whenever you save a DEM from ScapeMaker. You can convert VistaPro DEM objects into Lightwave format quickly - even in large batches with ScapeMaker's ARexx features. Using this feature requires a math chip or 68040.

Boolean Logic Combinations of 3D Objects

Now you can combine two 3D objects with AND, OR, XOR, NEG and NOT operations with a simple click of your mouse. Use one object to 'drill holes' in another and much more. ScapeMaker 4.0 makes it easy.

To order the new ScapeMaker 4.0 Direct

Please send payment of \$34.95 - International Money Order in \$US ONLY - (includes shipment to the UK or Europe) to: MegageM 1903 Adria Ave. Santa Maria, CA 93454 USA. Say you saw it in Amiga Format!

For Credit Card orders by phone/fax
Call our friends at Chaocity - 805 925 7732 fax 928 3128

This special reduced price offer of ScapeMaker 4.0 will be valid until May 30, 1996. By taking advantage of this limited time offer to Amiga Format readers, you will save over \$20. See ScapeMaker 4.0 on the World Wide Web! <http://www.fx.net/~megagem>

Gopher the Internet Bundle

One of the knock on effects of the Surfer Bundle will be the proliferation of alternative services and bundles from third party developers.

Hi-Soft (0500 223660) already offer two alternatives: *The Surfing Starter Pack* and the *Surfing Super Pack*. Incorporating a mix of appropriate hardware and software – both packs include the Surf Squirrel Interface - the bundles could be your first step onto the morass of information that is the Net.

Another project in the pipeline from a well known developer and modem manufacturer includes a floppy/CD mix of software and Internet applications and an appropriate modem depending on the needs of the user. One of the hoped for programs will be an updated and easy to use version of I-Browse (see page 88). Final prices, specs, and the mystery developer will make an announcement sometime within the next couple of months.

Still poised to take the potential browser market by storm, the Surfer bundle is a step in the right direction.

The Bradford Column

One of the defining aspects of Amiga ownership used to be a generous intravenous injection of smugness, administered immediately after the point of purchase. The best games with the best graphics, outstanding sound capabilities, the most useful utilities, the friendliest

OS, even the fact that it was the most expensive 'home' computer all contributed to that comforting warm glow its owners felt.

While many of us wail and gnash our teeth in frustration at what has become of the whole Amiga experience since those halcyon days (which weren't that long ago), perhaps we should occasionally spare a thought for the manufacturers who produced the Amiga's rivals, Acorn and Atari.

Acorn, you say? Well yes. They tried. Really they did. Even to the point of calling the ST and Amiga a pair of turkeys in their ad campaigns (as in 'Don't buy a... this Christmas').

They desperately courted the affections of the software publishers and retailers, and although 'successful' would not be the first word that comes to mind to describe their attempts at mass market penetration (well, Zool and

They tried. Really they did. Even to the point of calling the ST and Amiga a pair of turkeys...

Manchester United eventually surfaced on the format, and it was spotted in several Argos window displays for a while) some schools and education establishments continued to buy the Archies.

Where are Acorn now? Being bought by Apple apparently, according to whispers in the trade, for reasons unknown – but you can bet it wasn't for their mass market penetration.

Then there's dear old Atari. As recently as 1992 they unveiled an Amiga-beating home computer (the Falcon, in case you'd forgotten), which enjoyed tremendous software support from one or two publishers. For a few months. The management looked around them, 'consoles' they said to each other, and set about bringing the world's first 64-bit games machine to market. The ST? Dead. Falcon? Same.

Jaguar will soon be the name on everyone's lips, they decided. Only it didn't happen. Recently the console was reduced to a 699 RRP. Did anyone care? Did anyone notice? Certainly not the software publishers. Or the retailers. Or the consumers.

So take heart, fellow Amiga owners. It is better to have an uncertain future than none at all. There are many publishers still developing software and peripherals for our machine, long after they've given up on its rivals.

Contact Dale Bradford by fax on 01633 896087.

The opinions expressed here are those of a Welshman who is an ex-retailer, but not necessarily those of Amiga Format.

Net Corner

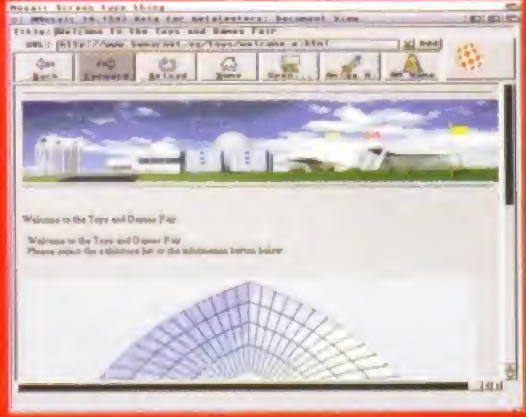

DISNEY GO DIGITAL

Not only have Walt Disney turned to computer technology for the production of their smooth hit animation toy Story, they are also using the internet to promote the film. After taking in an incredible \$175.5m of the US box office, the film looks set to repeat its success over here.

The film's computer-generated characters have appealed to audiences of all age groups in the States and the Web site will introduce people in the UK to them through several means. Visitors to the site will be able to play several arcade games based on the film, view film clips, listen to sound bites and access a "play list" database that will direct them to their nearest cinema showing the film. The film opens on the March 22nd and looks like great fun. The address for ToyStory is <http://www.bwt.co.uk/toystory/>

TRADE FAIRS GO VIRTUAL

BenaMet Management have just announced plans for several virtual trade fairs they are to be set up

Virtual fairs may be the future of trade conferences - you can buy and sell your products without leaving the office.

on the internet. The first of these is the Virtual Toy Trade Fair which the company hopes will enable all kinds of businesses to buy and sell toys worldwide. Anybody can visit the site free of charge, but exhibitors will have to be prepared to meet a hefty £2,000 for a pre-designed stand. The address for the Toy Fair is <http://www.bemal.net>.

DEMON INTERNET

Demon Internet Services are enjoying a recent period of expansion and are introducing several

new services. One of the new services is the ability to send faxes anywhere in the world over the internet. They are increasing their bandwidth to the US which will improve access times to the States. And they are also offering a RealAudio service which plays sounds live from the company's web server instead of downloading them and then playing them back.

If you want to find out more about what Demon Internet Services has to offer call them on 0181 571 1234.

"You can end up getting blown to bits all too often when you try to make your escape."
David Taylor seems to be fighting a losing battle...

THE AMAZING SURF SQUIRREL INTERFACE

£99.95
plus P&P

The powerful Surf Squirrel™ interface is the cutting edge technology for easy A1200 expansion. Providing a high performance SCSI-2 interface, Surf Squirrel permits easy addition of up to 7 SCSI peripherals, such as a hard disk, a Zip™ drive or a CD-ROM to your A1200; Squirrel is also the only SCSI expansion that is hot plug and unplug, requires no opening of your Amiga, no technical knowledge and does not invalidate your warranty!

But that's not all, Surf Squirrel also has a fully buffered, high speed serial port that is capable of performing up to 600% faster than the A1200's serial port, so Surf Squirrel gets the most out of your modem and your A1200 to make high speed file download, with multi-tasking, a reality not a possibility.

The package comprises the Surf Squirrel Interface, SCSI drivers, CD32/CDTV emulator, serial drivers, and an extensive, fully illustrated, user manual. Here are just a few of the reasons why the Surf Squirrel SCSI Interface is ideal expansion peripheral for your A1200:

- ★ High performance SCSI 2 hardware for easy expansion; supports up to seven SCSI devices.
- ★ No technical knowledge required, easy-to-use setup program included.
- ★ Compatible with any SCSI-1 and SCSI-2 peripherals.
- ★ Autobooting - boot from an external hard disk.
- ★ Hot plug and unplug - no need to power off to remove the interface.
- ★ All software drivers required for the connection of CD-ROMs or hard drives included.
- ★ Includes a full CD32/CDTV emulator for use with a SCSI CD-ROM drive.
- ★ Fits externally - doesn't invalidate your A1200 warranty.
- ★ High performance, fully buffered serial port to give reliable data transfer at up to 230400 bps - dramatically reduces the time spent on the phone and your phone bills.
- ★ Industry standard 9 pin serial socket for easy modem connection.
- ★ Serial port is compatible with all comms, networking, and serial hardware.

How much faster is the Surf Squirrel?

Bars A,B and C are the maximum transfer rates obtained when downloading an ASCII, Database and Graphic file respectively, using a V34/VFC modem. Bars E,F and G are the maximum transfer rates obtained when downloading an ASCII, Database and Graphic file respectively, using a V32bis modem.

Order Hotline

0500 223660

To order any of the products shown on this page (or any other HiSoft title) - just call us, free of charge, on 0500 223660, armed with your credit or debit card; we will normally despatch within 4 working days (£4 P&P) or, for only £6 within the UK, by guaranteed next day delivery (for goods in stock). Alternatively, you can send us a cheque or postal orders, made out to HiSoft. All prices include VAT. Export orders: please call or fax to confirm pricing and postage costs.

MAKING THE CONNECTION

EMAIL • NEWS • WEB • FTP
GOPHER • TCP/IP • USENET

Start surfing with one of HiSoft System's Surf Packs. Designed for both the beginner and expert alike, the Squirrel Surf packs include all software, hardware and documentation to get you quickly, and easily, onto the information super highway.

Surfing Starter Pack

- ★ V32 Modem, capable of speeds up to 14,400 bps.
- ★ Surf Squirrel interface.
- ★ Termite communications software - powerful yet easy-to-use, perfect for BBS and CIX access.
- ★ Free CIX registration (worth £29).
- ★ Simple installation.

Surfing Super Pack

- ★ V34 Modem, capable of speeds up to 28,800 bps.
- ★ Surf Squirrel interface.
- ★ Termite software.
- ★ Free CIX registration (worth £29).
- ★ All the tools you need for internet cruising, ready-to-go, no set-up.
- ★ Simple installation.

The SCSI MPEG Player for your Amiga, Atari, Macintosh & IBM-PC Compatible

- ★ Bring the cinema into your home and onto your computer with Squirrel MPEG™. Playing the popular VideoCD and CDI CD-ROMs as well as raw MPEG streams, Squirrel MPEG brings high quality digitally mastered images and 16-bit stereo sound to you and your Amiga.
- ★ Squirrel MPEG is a SCSI peripheral that can be used in conjunction with any SCSI controller, such as the Classic Squirrel™ or Surf Squirrel™, and any VideoCD compatible CD-ROM. Squirrel MPEG can also be used as a stand-alone unit, with a SCSI CD-ROM, as an addition to your TV, Video and Hi-Fi setup.
- ★ Available from January 1996, Squirrel MPEG is the latest in an established line of ground-breaking products, for you and your Amiga, from HiSoft Systems.

Encounter the Web

The Internet is expanding and becoming cheaper to access – to discover the benefits for the Amiga user, join us on our 9-page voyage of discovery...

You may not be terribly interested in comms and the whole Internet scene, but do you really know what you are missing out on? The Internet is a huge resource, and with bundles of easily accessed information, gigabytes of files and software to download it is an Amiga resource which cannot be ignored. The Aminet has been running for a third of the time that Fred Fish has been collecting PD, and yet it is already around four times bigger. With the collapse of Commodore, it was the Internet which allowed remote users to keep in touch with what was going on. It is still the most lively and frequently updated source of Amiga information. Sit back and let us show you what awaits you online.

ON THE NEXT 8 PAGES

The World Wide Web revealed page 18

Why you would want to use FTP page 20

Electronic mail and Newsgroups page 22

Real-time chat via the Internet page 24

The World

The reason for the dramatic growth in Internet use over recent years is the realisation of a single concept. Join us as we find out why...

The Internet has been around for years. Since its inception to the present day it has mainly been used by academics to keep in touch with each other, pool resources and swap files for the greater good. The only reason anyone outside this rather exclusive circle has heard of the Internet is due to the concept and implementation of a new user-interface to the network, the World Wide Web and the browser programs that go with it.

Instead of staring at screens full of text, typing in arcane shell commands and above all, knowing exactly where you wanted to be before you got there, web browsers provide an easy to understand (well, easier anyway) way of accessing all this information. Most modern computer users, and even those with PCs, are familiar with the idea of a GUI (Graphical User Interface) and can quite happily navigate their way through the web, oblivious of all the complicated networking that is going on behind the scenes.

BUT HOW DOES IT WORK?

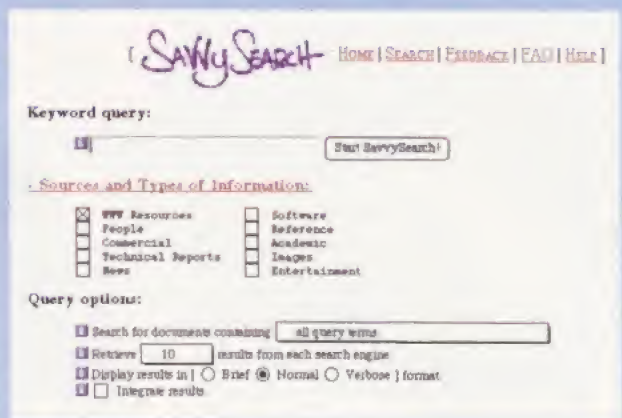

The major difference between the so called World Wide Web (WWW) and traditional comms services isn't really anything to do with technology at all, but more to do with concept.

When you connect to a WWW page with your browser, all that is coming down your phone line is the same old binary data. In fact, the majority of the data that is transferred is just ASCII text. The difference is that this text has special commands imbedded into it which pass instructions on to the software you run on your computer. These instructions tell the "browser" software in what part of the screen to display the text, what font it should be in and what colour etc.

This special text is known as HTML (HyperText Markup Language) and can include links to other computers on the Internet as well as links to image files, which your browser can then display on screen in the right area of the page.

Making the interface of the browser graphic orientate makes the World Wide Web much more accessible, and is really responsible for the surge of interest in the Internet.

Savvy Search is one of the more reliable engines for finding things on the net.

WWW Browsers allow the user to move from one server to another simply by clicking on "links" displayed on screen. These linking items may just appear to be some highlighted text, or a little icon or even a small part of a bigger picture, but the embedded codes will tell the browser where it has to receive the next screen of information from. Whether it is another document on the same server, or on a completely different machine in a different building, country or continent.

The WWW itself only came into being in 1990, as part of a project developed at the CERN laboratories. Since then it has obviously become the fastest growing part of the Internet. But why? Surely not everyone has a great desire to read other peoples research into particle physics?

Well, you'd be surprised. But as more and more people created web sites, there was a lot of overcapacity, so little sites gradually built up with home pages from the creators, information about their hobbies and so on. It became cool on campus.

DOWN TO BUSINESS

Another very good reason for the popularity of the World Wide Web is that corporations have seen the opportunity to make money out of it. This is not all bad, because it enables companies to set up their own pages. These give more information than you could get in a 30 second TV advert, and unlike TV adverts, the consumer doesn't have to look at them at all.

This is beneficial to the general public because it means the companies involved actually have to offer their customers some real, tangible benefits. Possibly the most common example of this, since the groundbreaking Guinness ad appeared on Futurenet, are screensavers - visit our product site and read some of the things we have to say and you too can have a free gift.

Many companies now offer genuine services via their WWW pages alongside promotion of their products. You can order wine from Sainsburys, flowers from Interflora - you can even check out the best insurance quote for your new motor.

HOTTEST WEB SIGHTS

1 <http://www.cs.cf.ac.uk/Movies/>
If you have ever wondered what the name of Donald Pleasance's character in "The Great Escape" was, or how many films Lysette Anthony was in after "Ivanhoe", then this is the site for you - a huge searchable database of just about every film ever made.

2 <http://www.syz.com>
The home of the authors of the excellent *Digital Universe* - this site gives more info on this tremendous program and you can also download a demo version - but be warned, it is over 3Mb!

3 <http://www.soluciones.ad/Ezquerro/EzquerroHomePage.html>
If you like comic artwork, and especially if you are a Judge Dredd fan, you shouldn't miss the homepage of Carlos Ezquerro, the original Dredd artist. It hasn't been going very long, but there is already a wealth of great art there.

4 http://www.scotweb.co.uk/whisky/maltfile/protected/maltfile_search.html
It would be impossible for us to compile a list of top sites which does not include this marvellous invention. Fill in a few details about your perfect whiskey, how peaty it should be, which region it should come from etc, and the server will do the rest, presenting you with a list of whiskey's you should try. Mines a Black Bush, cheers!

Wide Web

FOR MORE ON BROWSERS FOR THE AMIGA SEE AMIGANET ON PAGE 88

Most browsers cache the locations you have visited, so you can step back and forward through the sites you have already been to.

The "Home" button will take you to a default location - so you never need worry about getting lost.

The old animated logo. When something is happening, it moves to let you know that the whole system hasn't crashed, it's just trying to get some data from somewhere.

These gadgets allow the user to go quickly to an often visited, predetermined site.

Graphics can slow down the transfer of pages, but most browsers give you the option of whether to load them or not.

Many pages include email links so you can send messages directly to the author of the site.

The URL line gives the Unique Resource Location of the page you are viewing - It's just like an address really.

Most WWW pages include links to other related pages, either on the same server or on a completely different server somewhere else.

I DON'T UNDERSTAND

- Q** How do I connect to the World Wide Web from my Amiga?
- A** The first thing you need is a modem. The modem will be the link between your Amiga and a special computer server, known as a Point of Presence. Then you will need the browser, mail and network software for your Amiga. Amiga Technologies will be releasing a bundle containing a modem and the necessary software very soon.
- Q** What does this Point of Presence thing do then?
- A** The POP is basically a link to a big computer hard wired into the Internet. When you dial in, all the data you want to access is first sent to the POP, which then sends it down the phonenumber to you.
- Q** Isn't all this jolly expensive, contacting networks all over the world and that?
- A** It is relatively inexpensive once you have all the hardware and software. Your service provider will probably have a POP within a local call distance of where you live. All you will pay for is the phone call, plus a monthly charge to the service provider for using their POP.
- Q** Is there any other way of getting connected? I don't want to run up huge phone bills.
- A** Many cable companies are considering offering Internet connection as part of their service. This would mean you wouldn't actually pay any call costs at all.
- Q** But I live in a very remote area - there are no cable companies and I doubt if there is a POP close by.
- A** There is still hope. A few companies are experimenting with a derivation of the pocket radio. This would mean you would connect your Amiga to a special transmitter/receiver instead of a modem. The connection would be a lot slower, but it would be free!

GIVE ME FREEDOM

At the moment you will find a lot of black web pages. This is a protest against American legislation to censor the net, by making server owners responsible for what's on their pages. The World Wide Web has never had any form of censorship before, the contents of web sites have simply been down to the individual moral codes of the people that created them. With the Internet being so hyped in national media, it was only a matter of time before the moral minority stepped in to spoil everyone else's fun.

BUT WHERE IS IT?

It can take a lot of searching to find anything immoral on the net. In fact, finding things you may want to look at is one of the biggest difficulties with the WWW. For this reason, many search engines have appeared. These pages allow you to enter key words like "Lego", or "Bricks" and then they try to match them to anything in their own database. Given the rate at which pages appear and disappear, you still can't find everything you might expect to.

 This is the home of the NASA photo gallery. There are plenty of pictures from around the solar system taken from NASA space craft. There are also lots of details on past, present and future spaceflights.

FOR MORE ON BROWSERS FOR THE AMIGA SEE AMIGANET ON PAGE 88

What the

Get hold of all the programs, files, pictures, sounds, objects and anything else you can think of the easy way – use FTP.

The World-Wide Web is all very well for frittering away your time and diving this way and that throughout the Internet, but if you know what you want and where to get it from, loading in all those graphical pages can be an annoying waste of time

It is hardly surprising then, that FTP clients and the sites they access are still so popular. Instead of spending all your valuable time downloading graphics and waffle, you get to what you want, faster. FTP stands for File Transfer Protocol (and also, confusingly, File Transfer Program) and it is the long established method of transferring a binary or ASCII file from one location on the Internet to another.

A link is established from the "client" computer through the Internet to the server where the files reside. Standard text is then transmitted back to the FTP client software, listing the current directory. By a series of simple commands the user can then move up and down directories on the host server, reading text files or downloading binary data.

Amftp is an easy to use FTP program, which is included in Amiga Technologies "Surfer" bundle.

ANONYMOUSLY YOURS

You will often hear FTP sites described as Anonymous FTP sites. The reason for this is that the established protocol for FTP requires you to logon to the host server. Obviously if you have never been there before, this would be impossible, so most sites allow "anonymous" logins.

The username is given as "anonymous" and the password is just your email address. Almost all FTP software is configured to transmit this information for you, so you don't have to worry about it.

Some servers do make some vague checks as to the authenticity of the email address given, and it is only fair to tell the people whose computer you are using who you actually are, so it isn't really worth just making one up.

Thanks to the multitasking nature of the Amiga, and indeed, the multitasking nature of the links established. It is possible to download more than one file at once. This isn't as stupid as it sounds. Often the bottleneck in transfers comes between one of the links between computers along the way. It follows then, that if you need to download a number of

files, especially from different sites, the quickest way is to download them all simultaneously. Otherwise your paying for bandwidth you're not using.

ALL FOR ONE

Although there are plenty of Amiga specific FTP sites, you shouldn't neglect some of the other excellent resources out there. With a few helpful utilities you can also make use of sound and image files primarily intended for the Mac and there are also some sources of generic binary data.

Of course, the most accessed Amiga resource is undoubtedly the Aminet site and it's various mirrors across the world. Virtually every Amiga PD program as well as many support files and demos of commercial products are available here.

FAIR EXCHANGE

Of course, FTP enables you to send files to remote locations too, but obviously you can't just copy stuff willy nilly onto other peoples machines.

Usually areas which accept file submissions have special locations or directories for you to send files to.

WONDERS OF THE AMINET

The main Aminet site can be found at: <ftp://ftp.wustl.edu/~aminet/> but there is also a UK mirror, several German mirrors and many more throughout the world.

What is the Aminet? Only the largest (over 4Gb) on-line resource for the Amiga known to mankind. Virtually every bit of PD software ever released is in here somewhere, as well as loads of documents, music modules, 3D objects, pictures and everything else you could possibly want. This is the source of the Aminet CDs (which unless you have free net access, will probably work out a lot cheaper than downloading even a few dozen files from the main archive) the latest of which you will find reviewed on page 81.

Why not take part in a robotics experiment? This roboticised garden allows you to plant, water and watch things grow.

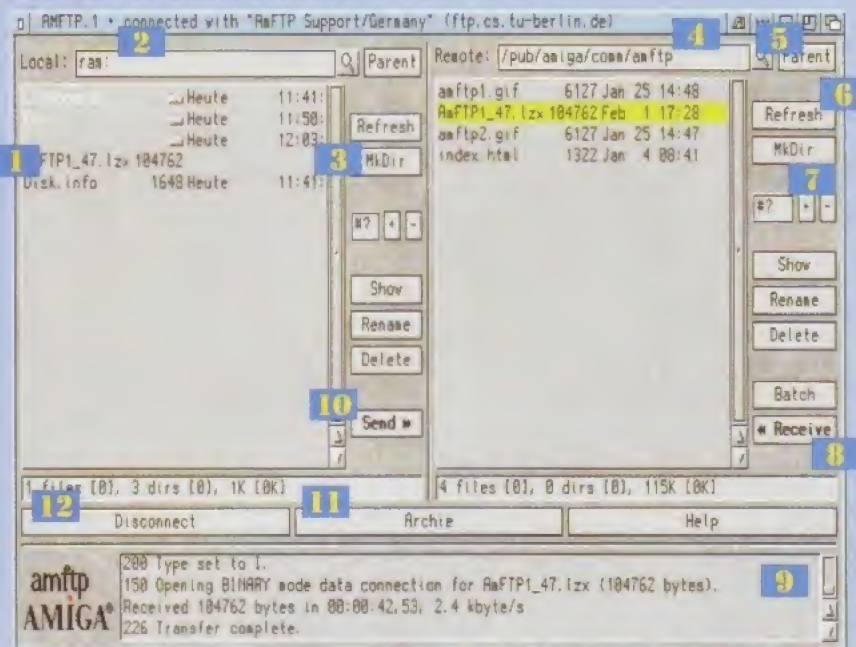

11 <http://www.odci.gov/cia>
A clandestine intelligence agency with a web site? Only in America. Here you can find out loads of info about the current chief (apart, presumably, from his home address), and even find out what jobs they have going, and how to join! Quis custodiet ipses custodiet eh?

12 <http://okra.ucr.edu/okra/>
Lost someone? The Okra search engine is dedicated to email addresses, so you can track down those you know to be on the net, but don't know their exact address. You can also enter more details about yourself so people can find you. With over 3 million entries, it's still far from complete – but it's a start.

hell is FTP?

ANATOMY OF AN FTP CLIENT PROGRAM

- 1 Using Amftp, files appear in lister windows, just as they would with a file management program like *Opus*
- 2 The pathname of your local disk for file downloads can be entered here.
- 3 This software even includes a gadget to let you create new directories for your downloads.
- 4 The remote path is basically the URL address of the ftp server you are connected to.
- 5 Clicking on this button will bring up a requester allowing you to easily navigate between directories.
- 6 Clicking on this button will refresh the directory listing, so you can see if more files have been added while you are connected.
- 7 A filter gadget allows only certain filetypes to be selected, eg "#?.gif"
- 8 When you have selected the desired files from the lister window, clicking here will access the remote site and "download" them.
- 9 The information window let's you know just what is going on and gives a complete transfer log.
- 10 The Send button is used to transfer files from your computer to the remote site.
- 11 Archie is a search tool used to find specific files. Sometimes it can actually be very useful.
- 12 The disconnect button will, rather obviously, terminate your session with that particular FTP site.

I DON'T UNDERSTAND

Q What is the difference between accessing a site with your FTP program or your web browser? **A** The FTP client will simply gain access to a server and give you a list of the directory you have asked for. You don't get a huge page full of graphics and text, just a directory listing.

Q Well, how do you move about then? **A** You can move up and down directories using the ftp software, just as you would with a file utility such as Directory Opus.

Q How do I download a file then? **A** Just double clicking on a file will cause it to be transferred to your computer (the FTP program will have a default directory for such downloads). Then you can do whatever you like with it.

Q I keep seeing things about mirrors. What the hell is a mirror? **A** Because popular sites are inundated by download requests, they can easily be overloaded, and because sometimes they are in a far off part of the network, mirrors are set up. A mirror is a duplicate of the original site, but run from a different server, usually in a different country.

Q So, can I just download files and run them straight away? **A** They are archived usually, to save space on the server, and to reduce transfer time. Amiga files you find will usually be in LHA format.

Q What's all this Gzip nonsense then? **A** Some systems aren't capable of transferring binary data via FTP. In these cases, the files are archived and then encoded into ASCII text for transfer. This is usually more common on Mac and PC sites

If joining the CIA doesn't really appeal to you, you might want to join "the other side". No, not the KGB, the organised anarchists. And this is where to find out all about various counter-intelligence strategies.

Your digital

Keep in touch with distant relatives, argue with complete strangers and upset the President of the USA - it can only be email...

Sometimes the more interesting aspects of the Internet are those which rely less on technology and more on other people. It is interesting that by far the most used aspect of the Internet is simple email - sending an electronic message to someone else.

The fact that most large bulletin boards and more conventional on-line services have email gateways to the Internet may be partly responsible - you don't need to fiddle around configuring all sorts of different bits and pieces of software just to send an email message.

But email is more than just chatting with your mates. An email is far faster than a letter - a reasonable time for a message to America is around 20 minutes. It is cheaper than phoning too, if your service provider is only a local call away. And, it can be even more secure than either of these methods.

SAFE AS HOUSES

Thanks to the evolution of computer aided cryptography, it is now possible to encode and send messages in all but perfect

Receiving mail electronically is very fast, efficient and fairly eco-friendly.

security. There are several systems available which will encode text using a Public key system, the most notable of which is PGP (Pretty Good Privacy). These systems are not totally secure, but you would need a spare afternoon and a Kray or two to crack the code. Systems like this make text communications secure enough to transfer financial details across the Internet.

But as well as cheap, secure communications, you can also join in discussions with other people and find out what's going on in the world with the Usenet newsgroups.

NEWSGROUPS

Think of Usenet as a gigantic global bulletin board, used by people all over the Internet to chat, fight, swap programs and do all the other things which people get up to.

Usenet is free. You can use it to post a technical question about your hard drive, or discuss the fundamental

differences in Warp Drive technology between Galaxy and Explorer class star ships. You can take part in heavy weight political discussions, or spend your time reading jokes.

But what actually is Usenet? Usenet is not an integral part of the Internet, it merely makes use of it (and various other networks) to propagate around the planet. There is no central Usenet site, your local service provider stores the last few days on incoming news, and passes on any it receives. Using a newsreader program you can tap into the stored messages, download them, read them, and if you wish, post some of your own.

At the moment there are at least 14,000 different newsgroups making up Usenet and there are several local groups on each providers site too. The newsgroups cover practically every subject you can think of, and a whole lot more besides. To make some attempt at organising them, they are

MAIL BONDING

Both Usenet and electronic mail are text based systems. They were designed to carry only text, and not binary data such as programs, images or sound samples. However, it's possible to convert binary data into text and included that in messages and emails using a utility such as UUENCODE.

This program takes a binary file and converts it into text. The text may look like gibberish, but when used with a UUENCODE utility out pops the original binary file. This is how newsgroups can carry images or programs.

Several Email programs support MIME, the Multipurpose Internet Mail Extensions. MIME uses a similar technique to bundle up all sorts of data (anything you can store on disk in fact) and converts it into a form suitable for transmission by email. The binary data is "attached" to the email, and when it is received the files are automatically reconstructed.

postbox

sorted into hierarchies: for example, the comp.* family include groups to do with computers. The groups beginning with comp.sys.* are related to specific

computers, and so you'll find newsgroups such as comp.sys.amiga.an-ounce and comp.sys.amiga.networking in this family tree.

There are several distinct hierarchies, and some of the more important are:

alt: These newsgroups are never moderated and therefore contain many "whacky and offbeat" subjects.

comp: Computer science groups.

news: Groups containing information about news networks and news software. An excellent source of information about Usenet and how to use it.

rec: Recreational groups, so full of hobbies, arts and sports related groups.

sci: Science newsgroups

soc: Social issues newsgroups

talk: Debate newsgroups

misc: If it doesn't fit anywhere else.

Some of the groups are moderated, especially those not in the alt.* tree, and in these cases any posted messages must be passed by the person in charge before they appear. Obviously this doesn't appeal to everybody, which is why the alt.* groups are so popular and bizarre.

Some groups are for announcements only, and so it is not possible to post to them.

USEFUL EMAIL ADDRESSES

As well as emailing people you know, why not try these addresses?

hisoft@cix.compulink.co.uk - Amiga developers, and creators of the Squirrel.
almathera@cix.compulink.co.uk - The people behind Photogenics and numerous CDs.
darsy@spuddy.mew.co.uk - our own net guru and accomplished drunk, Mr D. Irvine.
amformat@cix.compulink.co.uk - Guess. But remember to include the right subject!
president@whitehouse.gov - The President of the USA. God bless America.
gbo@amiga.fmnet.de - Gilles Bourdin, Amiga Technologies spokesperson.
oracle@cs.indiana.edu - The ex-Usenet oracle. Send it any question (put "tell me" in the subject line) and in a short while you will receive the definitive response.

Each group consists of typed conversations, usually about their chosen subject. A typical "thread" is started when someone posts a question or makes an observation: subsequent postings share the same topic and carry on as long as the subject is interesting.

ABSOLUTE BEGINNERS

If you are a total beginner, there are a few things you should do. The first is to take the time to find the right group to post in. Join several groups and read them for a while to see if your posting would be relevant. You should also read the "FAQ" or Frequently Asked Questions posts. Some groups post their own FAQs regularly, but make sure to join the group news.newusers.questions and news.announce.newusers as this will explain the various vital pieces of information you need to know in order not to get flamed.

Don't be afraid to take part though: you'll find Usenet one of the most useful and informative areas of the Internet. No matter if you have a technical question or a desire to talk about shoes, you'll find other people willing to help or chat with you.

Continued overleaf →

I DON'T UNDERSTAND

Q I often use a local bulletin board. Can I email anywhere on the net from there? **A** Probably. Most BBS systems have an email gateway these days, but sometimes you have to use a special address, and it may be more complicated to receive mail. Ask your sysop for more details.

Q I know someone in a far off land who has an email address, but I don't know what it is. How can I possibly find it out (without asking them because that would be cheating). **A** Aha! There are a few WWW sites which are basically huge databases of peoples email addresses. Okra is one of the more efficient ones (see our site guide on page 20).

Q What is the difference between ordinary mail and the newsgroups? **A** Newsgroups are public forums for discussion. Any message you post there can be read by anyone accessing the service (and obviously, vice versa).

Q People in the newsgroup have started saying nasty things to me because I don't understand what is going on. Should I fight back or just sulk? **A** Most Internet users are very friendly, but you could upset people if you "break the rules". Find out if there is a FAQ (Frequently Asked Questions) file for the group and read it - you are probably asking the same old questions or breaking some primitive taboo.

Q I heard there were lots of neat things you can do with email, like remote FTPing, anonymous posting and all sorts of other hoopy things. **A** Indeed you can, and Mailbase can help you. Send a message to mailbase@Mailbase.ac.uk and include the following text: "send lis-lis e-access-net.txt". You will receive a very interesting document in return.

Aardman animation is the Bristol based company behind that successful animated duo, Wallace and Gromit. This site not only has nice pics of your favourite characters, but also explains how the animations are put together.

24 <http://www.newtek.com/medium/lw-images.html>
The most famous piece of Amiga software has its own online gallery. Not as vast as some other sites, this is the official Lightwave domain and has some useful product info too.

Give it some

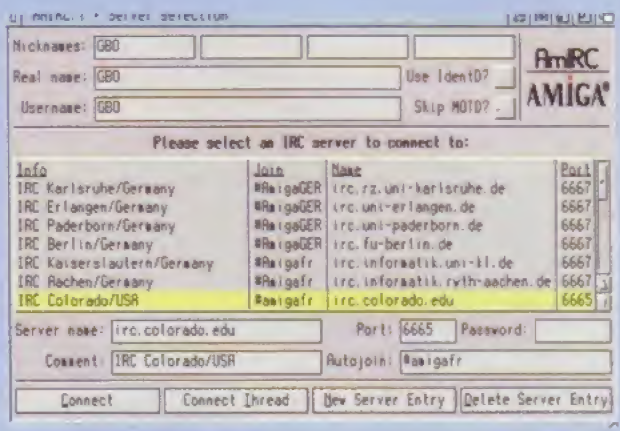

Who needs real social intercourse when you can make new friends on the Internet's real-time chat service?

Fancy going to a party? This is no ordinary party - it's happening 24 hours a day all over the world. People from any country in the world pop in, say hi, meet or make friends and then leave again. This is IRC.

Internet Relay Chat is a lot different from Electronic Mail and Usenet, because it's a "real time" system. When you use IRC, the messages you type appear within seconds on the screens of all the users world wide. Everyone wishing to take part connects to an IRC server machine and of course, in true Internet tradition it doesn't matter very much where the server is physically located. Any messages sent or received are then shared between all the participants. There are many of these IRC servers scattered all around the internet, and they are all inter-connected to each other - or at least to the other servers making up the same network.

Now we're starting to get a little complicated, but all you need to know is that there are many servers and at least three

Configuring AmIRC is simple enough. There are quite a few servers to choose from too.

networks: EffNet, Undernet and Dalnet. Which one you use is only a matter of convenience, and all software is compatible. Thus, in theory at least, if your friend connects to a server in London and you connect to a server in America, you can still communicate as though you were using the same server. In practice there are sometimes unfortunate situations called "netsplits" which can temporarily separate people on the channel - so if a load of people suddenly stop talking altogether, don't be concerned.

CHANNEL HOPPING

There are a great number of people using IRC all the time, and you might imagine that if they all tried to talk at once there would be total chaos. To avoid this, the IRC system splits the conversations into different "Channels". Each channel is like a separate room where users can meet to discuss given topics of conversation.

There are hundreds of channels such as #amiga and #amiga-cafe, and anyone can create a new one if they

want to start a new subject. Moving from one channel to another is easy, and if you want, you can join several at once.

THINK OF A NAME

When you start your IRC system going, you will have to think of a nickname. Everyone on IRC writes under a short but catchy nickname and you can't be the exception. Some users pick the most ridiculous thing that comes to mind, some try to pick cool or hard sounding names and some pick deliberately misleading pseudonyms. If you are female, it might be a good idea to start off with a good male sounding name for a while.

Think of IRC as a separate Internet utility like a Web browser or an Email system. You will need a special IRC "client" program to communicate with the server on your behalf. Using Telnet to login to a remote server is also possible, but a client program is always much faster and easier to use.

Before you get started, some words of warning. Using IRC can be

ARE YOU BEING SERVICED?

Getting a good service provider is the key to trouble-free net access. Ideally you will want one with a local Point of Presence, and one who can provide help for Amiga owners. That's where it all falls down really, because none of the service providers officially support the Amiga, although the most popular one with Amiga owners seems to be Demon, so at least you can ask the other Amiga owners on-line for help. Which service is the best financially will depend on how much you use the Internet. Most service providers charge a flat rate, give you so many hours of free access per month and then levy a small charge for every hour more than that you use. Here is a small selection:

- Demon Internet 0181 371 1234
- Compuserve 0800 289 387
- Pipex Dial 0500 474739
- UK Online 01749 333300

The top bar of Amftp tells you which server you are connected to, and when you joined so you can keep track of time.

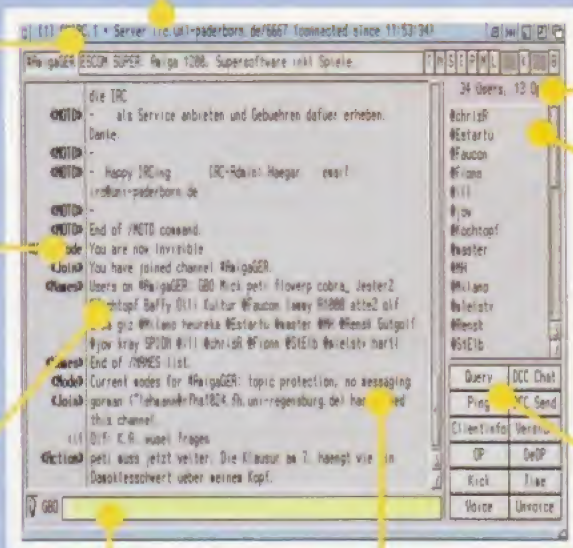

You will be kept up to date with how many users are online in your current channel.

The margin is used for displaying control information about the message that follows, otherwise things can get confusing.

This window displays all the nicknames of people currently on the channel.

When you first join a channel you will, by default, be given a list of nicknames of people already there - so you know if any of your chums are on-line.

You can query the IRC client for various types of information at any time.

This text window will show what you are typing - the message is only sent when you hit return.

The server will keep you informed of people joining and leaving the current channel.

horrifyingly addictive. If you access the Net via a dial-up link from home, make sure you keep track of the time you spend on-line. Try and keep your access to weekends or evenings when the cost is lower. You will see many people who seem to spend their entire lives plugged into IRC - remember that many of them will be students and those

working in offices who effectively have free access.

Amiga owners have a lot to gain by making use of IRC. It's an excellent way to discuss programs with other users, and it is also possible to send and receive binary files such as shareware utilities and demos. You'll soon make a lot of friends!

KNOW THE LINGO

- Address:** Either an email address, which is a unique ID of another Internet user which you can post mail to, or a WWW address, which is the URL of a website.
- Archie:** An Internet program which will search FTP sites to find a desired program.
- BBS:** A Bulletin Board System. A dial up site you can connect to using conventional comms software (like Ncomm or Term). Some allow email access to the Internet.
- Binaries:** A term used to describe binary files, usually programs or data files, and distinguish them from text files. Binary files are often compressed or encoded.
- Browser:** The software run on your local computer, which interprets all the HTML data you receive from the WWW and displays it as text and pictures on your screen. There are many different Browsers available for the Amiga (see page 88)
- Client software:** A client is software which runs on your computer to allow you to perform some particular Internet function. Amftp and Amirc are clients.
- Download:** To receive a file from a remote source (which could be a local BBS) and store it on your own computer.
- E-mail:** Short for electronic mail, it is a quick and convenient way of sending messages to other users of the Internet.
- FAQ:** Frequently Asked Questions. To save endless repetition, most newsgroups or ftp sites have a file containing the questions new users normally ask.
- FTP:** File Transfer Protocol. A way of sending and receiving files from other computers on the Internet.
- HTML:** HyperText Markup Language - the codes used to generate WWW pages.
- Internet:** A vast network of computers all over the world, which YOU can access.
- Modem:** Modulator/Demodulator. This is the box which translates information into audio data which can be sent along phone lines.
- Newsgroup:** A conference group where people can discuss worthy and unworthy topics.
- Pop:** A Point of Presence - a local phone number where you can dial in to your service provider.
- Server:** A computer which stores WWW pages or files which can be accessed via a network.
- Service provider:** A company which allows you to connect to the Internet via it's computers.
- Usenet:** A huge text-based message area of the Internet.
- WWW:** Short for World Wide Web - the pretty face of the Internet.

WEB SIGHTS HOTTEST WEB SIGHTS HOTTEST WEB SIGHTS HOTTEST WEB

29 http://www2.disney.com/static/News/docs/HM_T/home.html
More evil commerce I'm afraid, but at least the Disney site has some interesting online games and plenty of excellent graphics.

30 <http://www.lovenet.co.uk/dating/messages.htm>
If you are spending too much time on your computer, you soon won't have a social life - but you can get a new one here, the home of Internet dating in the UK. Some of the ads are quite amusing if nothing else.

31 <http://underground.net/~koganuts/Galleries/sttos.html>
You can never escape Star Trek. And why would you want to? It's great! And here is a site dedicated to everything in the original series. Even the useless lizard creatures that Kirk beat up in "Arena" have a page.

32 www.futurenet.co.uk
Well, let's face it. I would've been sacked if I didn't mention FutureNet. But it is phenomenally popular, and does feature regular news updates as well as the homepage of your favourite magazine.

“The Internet
was invented
by a man
called Irving.
By mistake.”

.net reveals the true history of the Internet and shows you how to get on-line.

Plus Uri Geller, Anita Roddick, Internet widows and the on-line spy society.

Britain's best-selling Internet magazine.

Ready for future by...

- suitable for all AMIGA™ models through mainboard exchanging frame
- drive bays expandable as you like only limited by your controllers' capabilities
- modular expandable through Top-Case™ system
- easy access from all directions through SNAP and CLICK system
- „plug and play“ drive mounting-frames

And now for some technical specifications

the left pictures give you an imagination of the internal construction of the infinitiv™ tower system. The red marks and lines show some extended drive frames in both the front- and the back area of the tower. Further, you can see an Top-Case™, mounted on the towers' top, which explains the expandability of our solution. Each Top-Case™ expands your infinitiv™ tower for an 5,25"/ 3,5" drive bay, ready to use and easy to assemble. Additional drives such as CD-ROMs, harddisks, streamer tapedrives etc. will snap in easily by using our sophisticated „click and snap“ system.

micronik™ accessoires

- RAM card, expandable up to 8MB, incl. clock and math co-pro socket with standard PS/2 SIMM modules..... £ 42

Steve McGill

Top news for gamers this month concerns the deal being struck between Ocean and an as yet undisclosed third party accelerator manufacturer. Reductions of up to 50% on accelerator expansions are expected to be offered to any purchaser of *Alien Breed 3D II*.

Considering the knock on effect this could have for the rest of the Amiga market, it's no wonder that there are a load of cheesy grins in the *Format* office this month.

The game itself, if it lives up to what I've seen so far, is going to be something special. The level editor should witness a surge of new levels appearing in the public domain. The potential for some truly ingenious designs is being put into the hands of gamers at large. Intricate relationships between the aliens and the environment can be built

Combined with an accelerator the playing speed, pace and grim realism of the game may be too much for the more timid gamer.

Hopefully, if the accelerator offer is taken up in numbers, Ocean might get round to releasing *TFX* once and for all.

I hope you like the extended Preview section this month. *Breed 3D II* is good enough to merit it. Enjoy.

AMIGA FORMAT'S REVIEW POLICY

Every month we scour the world's software houses for the latest and greatest Amiga games. We try to ensure we keep you as up-to-date as possible and we'll stop at nothing to bring you the best, definitive, no-nonsense reviews of the games that matter.

WHAT OUR REVIEW SCORES MEAN

- 90-100%** The crème de la crème. Only the very best, most playable and original games are awarded an AF Gold – the most highly prized rating there is.
- 80-89%** These games are very good, but due to minor flaws are not the finest examples of their genre.
- 70-79%** Good games which are worth buying, especially if you have a special interest in a game type.
- 60-69%** Average releases with somewhat limited gameplay and appeal. Games in this category tend to be flawed.
- 50-59%** Below average games which are unlikely to impress your mates or your wallet. Avoid.
- 40-49%** Overwhelmingly poor quality games with major flaws and appalling gameplay.

Less than 40%

The absolute pits.

Reviews

A specially extended preview for what could be one of the best 3D games ever.

Creatures have their own hidden agenda's set by their IQ.

If you shoot him you alert the others. If you don't he'll kill you.

Alien Breed 3D II The Killing Grounds

AGA Amigas and ECS Amigas with 2Mb and 68020 processor ■ Team 17 ■ 01924 271637

Alien Breed 3D II (The Killing Grounds) is going to incorporate all of the above freedoms plus some significant extras. If everything goes to plan this should be the game that finally proves anything the PC can do the Amiga can do too; especially when the price/performance/convenience ratio is taken into account.

While the engine used in *Breathless* displayed to the world the power potential of a modestly upgraded Amiga, the level design, the gameplay, and the intelligence of the adversaries could have been much better.

The time has come to dispense with the notion that key fetching and carrying tasks are the only objectives available in *Doom* styled games. Rather than rely on such a basic mechanism, Team 17 are putting a lot of thought into the mission structure of *Breed 3D II*. "There will be times when a scrolling text message appears at the bottom of the

We'll discuss *Alien Breed 3D II* in a minute.

But first, a thought or two. One of the biggest problems with games console platforms such as the Playstation, the Saturn, the SNES, and the MegaDrive is their lack of interactivity and commitment to consumer freedom.

Sure, each in their closed restrictive proprietary way can offer some pretty entertaining games. Nevertheless, consoles play host to games that, through hardware restriction, ultimately dictate how they will play, how they will look, how they will sound, and how they can be beaten.

The Amiga offers a much wider entertainment bandwidth than that. The Amiga offers an entertainment system which can empower those who choose to be empowered by it. The Amiga, through its open architecture and

commitment to freedom, rises above the consoles' restrictiveness and positively encourages true interactivity.

Take Team 17's *Worms* as a prime example. Players can access over 3 billion battle terrains by simply typing in random or deliberate numbers and letters.

They can also create their own terrains in an art package – imagination and ability being the only restriction on the result.

If that's not enough, the complete range of samples incorporated in the game can be changed and swapped about to anything the player desires.

The potential for comedy is staggering. Even without these customisation abilities, the range of options on offer is one of the widest seen in a videogame.

Right: Lighting will play a large part in the strategy of the game.

Continued overleaf →

Imagine letting an alien spot you, killing him, and then waiting for all the friends he summoned to appear. As they walked through the door you could blast them. Ha ha.

Many of the objects that radiate light will be destroyable by the player and aliens alike. Imagine being surrounded and then plunged into darkness.

screen. This is Reynolds thinking to himself. It might be that he needs to find explosive to blow a door open or destroy a structure. The messages set tasks and give the player a guiding hand. It'll be much more interesting than searching and fetching keys to open doors," forwards Andy Clitheroe - *Breed II*'s coder and designer. "To help, there are going to be multi-packs that can be picked up. These might contain a bit of

health, some ammunition, and possibly even a new weapon. But you won't know until you've picked it up."

Unlike the boxiness of *Breathless*, *Breed 3D II* will feature multi-levels, curving corridors, rounded and irregular shaped rooms; features destined to make the corridors, rooms, and chambers more challenging by nature.

There are going to be 20 creatures inhabiting the 16 levels of the game. Probably above all other features, it is the artificial intelligence exhibited by the creatures which will enhance the playing experience. There are going to be four distinct intelligence patterns.

Each pattern has several parameters

affecting how the creature behaves within that pattern.

Some will be overtly aggressive. Others will be cunning and summon help before tackling you, yet others will retreat when they realise they're in danger of being killed. "It is in this area that *Breed 3D II* is way ahead of any other similar games on the Amiga market," states Andy.

"In *Breed II* the creatures might not see you. They might miss when they fire at you. They might even hear you coming. But unlike *Breathless*, *Fears*, and *Gloom* the creatures don't just home in and fire all the time. They appear to think and act accordingly. That should enhance the play."

During the demonstration of the game, Andy showed me the artificial intelligence in action. Across an unbridgeable chasm he shot at a robot on the other side. It turned and faced where the shot came from. It then

moved away. "It's making its way round to find me," explained Andy.

Eventually, the robot found him and he took great pleasure in blowing it away. "You could, if you wanted, be deliberately spotted, give your position away, let the creature communicate to his friends where you are, waste him, hide, and then take out all of the friends by grenading them when they arrive at your last reported position." Tremendous scope for strategic play lies in this area.

One of the areas of *Breathless* that we particularly liked lay in the atmospheric use of lighting. *Breed 3D II* might just have the edge here too. Light floods corridors when doors are opened. Gunfire lights up not only the surrounding area, but the creatures themselves - and this happens in real time. Linked to the use of transparent objects and water, the overall effect will result in atmospheric overload.

Top Left: Create your own psychedelic patterns with the texture map editor.

Left: Habitat lights end up getting everywhere. Even in games.

Above: Many of these screenshots would make good static pictures in themselves. Imagine what they're like when they move.

Lights can be shot out, plunging corridors into darkness. Light, as you might have guessed, is going to play a large part in the overall feel of the game.

An integral part of the game, and the part that will ensure that *Breed 3D II* will be an all year round seller is the editor.

The editor allows the gamer complete control over every aspect of the game other than the 3D engine:

Don't like the aliens in level 2? Change them. Want to create a level with walls and objects that are damageable in the manner of *Duke Nuke-em*? Create it. Want to put *Amiga Format's Real 3D* disk to profitable use creating and rendering new aliens? Go for it.

The editor consists of numerous applications – all written using Amos – which gives complete power to anyone wishing to exploit it. The behaviour of the aliens can be completely customised. A particular alien could be made cowardly but then very communicative to other heavier aliens.

The look of the aliens could be changed to whatever you fancy. It could be your least favourite football star or your favourite babe; whoever, whatever.

Rooms, corridors, ceilings and walls can be created with customised textures added. If desired, and it'd add some interesting nuances to the overall design and gameplay, every wall and every door could be made a destroyable object. The Amiga would be able to take on *Duke Nuke-em* in its own territory at far lower cost.

That's not all that can be done with the editor, but it does give a good idea of the potential. Once released, I can see the AmiNet and the PD libraries filling up with Amiga owner's creations. Something console owners restricted to overpriced formulaic games will never be able to do. Shame.

We'll fill you in on more aspects of the editor at a later date. Needless to say, what we saw was terrific. Coupled with the potential quality of the game and the sharp marketing Ocean are throwing behind it, *Breed 3D II* looks to have the potential to be the Amiga's brightest star. *Breathless* broke the mold with its engine and graphics.

Now *Breed 3D II* looks as if it will fill in with some much needed innovative gameplay. Look out for the review and a Coverdisk soon.

"It's a grab Jim. But not as we know it." Said Spock to the Captain.

Light up the face you hate with a rocket launcher. Alternatively, if this monster appears like this then you're too close. Run away!

Goah. There's so much going on here that I almost want to play the game for another few solid days just to make sure I haven't made a horrible mistake. There's certainly a lot of hot action going

The game has six levels in all, taking place over three terrain types. It adds to a lot of variety when you rhyme it off. The gameplay is the same all round though. Dull.

WATCHTOWER

Steve McGill gets all philosophical about the latest offering from OTM... frivolous entertainment or market enemy?

The biggest question to be asked of Amiga owners when faced with a game like *Watchtower* is, does it give them what they want out of their Amiga games? If it's progress and entertainment that's required, then Amiga owners will unfortunately have to look elsewhere. *Watchtower* covers old ground and offers little that's worth writing home about. But that's not to say it's terrible or anything. Because it's not.

It represents a cogent attempt at an old style of game. Technically, the mechanics like the scrolling, the animation, the power ups, and the variety are all competent and smooth, if a little dated.

Despite some fatal flaws in the gameplay's execution, there are still people who'll find enjoyment playing a game like *Watchtower*. But even those people will balk at the price they're expected to pay for such a frivolous shot at entertainment.

Thirty pounds is a marketing attempt to extract blood from a ground down stone. For this wad of dosh, *Watchtower* offers a vertically scrolling shoot-em-up with a passing resemblance to the *Chaos Engine*.

The player takes control of a muscle bound protagonist whose sole aim in life is to reach the very top of the seemingly endless scrolling screen. Trying to stop him from doing this worthy and noble task are the various baddies. These take the shape of assorted soldier types; commandos, river rats, snipers, grenade soldiers, and bazooka soldiers; various vehicle types; trucks, one turret tanks, double barrel tanks, solid barrel tanks, attack choppers, fighter planes, and submarines; there are even buildings and installations that offer threat; radar sights, watchtowers, and bunkers.

Now, reading all of the above, you're bound to be thinking that the game offers a lot in terms of variety. After all, there are loads of power ups; extra weapons, extra health kits, grenades, and money to be savoured.

But the game is crucified by its linearity and the

Look out behind you there's a grenade-wielding tank. I won't fall for that old...aaaarrggggghh.

This pill box can only fire in eight directions. Here we've placed the man so he can't be shot.

The more money you pick up, the more you score as a bonus.

Luckily, these medi-kits are liberally spread around the battlefield.

Weapon power ups aid in the killing efficiency of your bloke. Hurrah for that.

Grenades would be easier to launch with a two button joystick.

The pinnacle of a level. Collect this and you earn an extra life.

y the game doesn't play as well as it looks, it really is.

BLOW-UP CRATE

The success of missions depends largely on your tactile dexterity and the use of the objects found in the various crates scattered around the levels.

To see what a crate's hiding you've got to shoot it. Miraculously it blows up using the Super Stardust explosion routine and looks really 'groovy man.'

Above: That legendary explosive routine in action. I've never grown tired of it. It's really good when you use grenades to kill tanks and things. Then it takes up most of the screen.

TOWER

limitation of the control method. As soon as you start shooting with the central character, his movement is limited. He can no longer move forwards, backwards or to the side. He can only rotate in eight directions.

With limited incoming fire from enemies it's easy enough to stop firing, dodge a bit, and take out the main problem. But when caught in a crossfire it feels hateful. Sometimes, it's practically impossible not to get hit and killed. And that's bad.

Rather than hitting blokes on the run and ploughing on through the game, a lot of time is spent dodging and weaving until there's enough time to let loose a shot or two. If you miss then it's curtains. What could have been entertainment has suddenly become a tedious workout in tactile relations between the player and his joystick. Not a great deal of fun.

To compound the firing flaw, there's also the matter of being fired upon by soldiers that can't even be seen on-screen. Your man can run faster than the screen scrolls. So, if he had been set upon by four soldiers, shot two of them and then decided to run for the safety of the top of the screen. He could reach it, have to wait for the screen to scroll to reveal more of the landscape and suddenly find himself shot dead by someone he couldn't even see. Incredibly, frustrating. Combined with the one stop shots, it just about kills the entertainment value stone dead.

The last of the criticisms, and it's one that some might consider has no place in the pages of *Amiga*

Format, is that of philosophy. Not philosophy of the Machiavelli, Plato, Descartes, kind, but philosophy of the Amiga UK videogame marketing kind.

There are now glimmers of light regarding the Amiga's future. The smartest companies are waking up to the fact that the SNES and the Mega-Drive, no longer represent a gravy train of 100% sales expansion. The brick wall of overpriced cartridges, restrictive Japanese sales practice (entertainment tax anyone?), and exponential consumer dissatisfaction has finally been reached. Only select games are bought in significant numbers and turn over a profit. Dogs are killing innovative development off, ensuring losses and minimal returns.

This forms part of my problem with *Watchtower*. You only have to play it for a short time to realise it's not going to sell in numbers; in effect, you could call it a dog. OTM may be the first to admit that themselves. OTM probably know marketing and the law of supply and demand versus margins much more than they know games. At the price of £30, a few thousand sales will see them able to pay the programmers and return a modest profit from the overheads of publishing and distribution. No more, no less.

As such the game has to be looked upon as an enemy of the market for two reasons:

1) Amiga owners deserve more for £30. With a couple of changes it could have been highly entertaining. At £20 less it might even represent value for money.

2) Low sales of games at this crucial time act as a deterrent to bigger companies researching the viability of the Amiga market. In the face of the console collapse prospective developers might just figure that Sony and Sony's entertainment tax represents the better risk...

Watchtower's price and level of playability, is so out of kilter with what the market needs that you can only conclude that everyone would be better off if it was given a miss.

15" & 17" MONITOR OPTIONS
 The 15" and 17" Samsung monitors retain all the features of the 14" model. They're extremely stable and help make light work of tasks such as DTP, word processing etc. Digital adjustment of screen settings and picture preference memory allows the user to store their preferred picture setup. These models were awarded a Mac Format Classic in issue 26.

A game that allows you to follow orders and aid the destruction of peaceful civilisations or switch sides and fight the good fight. **David Taylor** launches his attack.

Star Crusader

Star Crusader purports to be a non-linear game where you get to choose who's side your on. At the start you are flying missions for the expanding Gorene empire whose noble goal is to assimilate other cultures, by liberating them from their own backward ways and showing them the glorious life they can lead by joining you.

From the very outset, you can tell that your missions are somewhat dodgy – destroying freighters that you've promised peaceful passage to – under orders from an unhinged commander who locks up any dissidents. You know that it's all too much, but what are you going

to do? It sounds like you've got loads of options, but frankly, you haven't. You end up reading screens of text, whispering mutinous thoughts to your comrades, but fly the nasty missions anyway. In the conversations your characters lines are spoken for you. So you might be thinking – "So what, let's destroy the fools who oppose us whilst we have them on their knees" and your character will be saying something like "Well, I know it's wrong, but what can we do?" Shoot the commander and become a benevolent dictator mate, that's what you could do.

Even later in the game, when you do get some command, your missions are pretty much set out for you and you don't get the opportunity to direct as much as you'd like to.

The plot is largely veneer. This is more or less a *Wing Commander* rip-off with a few adjustments. You have a base to explore, which turns out to be a few rooms with not much going on. But, heh, this is just the glue that sticks the missions you fly together. When you start out, you just obey orders, fly into space and do what you've got to do.

There are a variety of missions. Simple all out attack is mingled with the odd stealth mission. The latter can actually be the most engaging as you fly the Intruder spacecraft deep into enemy territory trying to remain

undetected so that you can launch a probe and scan their ships and databases. Unfortunately, the Intruder ship can be a bit crap and it gets detected all the time, meaning you end up doing a runner.

When you complete a mission – or fail it and turn tail – you get to engage your hyperjump engine. This means being at a complete standstill with shields lowered whilst the "Singularity Field" needed is generated. You guessed it – make yourself a sitting duck for the enemy to use as target practice. You can end up getting blown to bits all too often when you try to make your escape.

The actual gameplay of the dog fights isn't too bad. It gets a bit jerky on a standard A1200 when there's lots going on, but you can change the detail a bit to try and compensate. This brings us to the system requirements for the game. It's a minimum of an A1200 with a hard drive, because you've got ten disks to install. This seems like a lot, but see the box for more details on these boring bits.

The game is mouse controlled and you can get to grips with manoeuvring the craft very easily. The real downer as far as gameplay is concerned is the lack of weapons. OK, you fly several different ships, with different payloads and speed capacities, but at the end of the day

Above: It is possible to get in close to other ships and fly around them when fighting, so long as you don't smash into them, which will cause major damage and leave you a sitting duck.

Above: Before flying a mission, this bloke will give you a rundown on mission targets and objectives as well as details of your abilities.

Commander Ferrand has formulated our next mission, which he calls Operation Peace Through Force. It's time to make another gesture of peace to the Tancred. A Tancred frigate -- the *Kuntaw* -- is transiting through the region between the *Mazema* and *Tancred* borders. It is guarded by at least eight armed escorts. Wing Leader Alexandria, Pilot Lauton, Pilot Helmar, and Pilot Nept, you are ordered to destroy the escorts, but you will under no circumstances...

you're down to using lasers and a set of missiles. The missiles will miss unless they are locked exactly, which can be tricky. Even when fighting against enemy pilots with a poor ranking, it takes forever to kill them and their ships don't seem to get hit even when you're bearing down directly on them.

Above: A stealth mission from which I was destined not to return and the mission briefing screen where the commander tells you a load of cobblers.

Left: There are some nice, rendered animations that join the parts of the game together. Unfortunately, this one is from the mission failure screen where my ship is destroyed and my head explodes in the vacuum.

However, when compared to the original *Wing Commander* Amiga game, it's swings and roundabouts. There's no doubt that there are areas of the game where *Wing Commander* comes out on top. It has better mission planning with navigation points to use and the prospect of proper ranks. In *Star Crusader* you only get promoted in times of red alert when the commander has gone off his trolley.

The game plays better in space. The ships jump less across the screen as the computer tries to calculate where everyone is. They still jump a bit on a standard A1200 when there's lots going on, but it's good to be able to

fly past one of your wingmen/women and see how they're fairing in a fight when you're chasing someone else.

The game also has excellent sampled speech and some nifty rendered cinema scenes that hang everything together, explaining a bit more of what's going on. The animations are a little jerky, but it's surprising to hear the whole dialogue spoken to you.

At the end of the day, the graphics do look a bit dated and blocky, but the gameplay can become engaging. This is not a game that's

going to enthrall most people and doesn't touch the likes of *Wing Commander 4* on the PC. But at least you don't need a £1500 Pentium and 4 CD-ROMs to play it. A better Starbase with more frills and tweaked gameplay using ships that didn't look so naff would have been better. But this is a portover and you don't expect them to do things like that. The basic engine for the game is reasonable and there were occasions when I got genuinely excited, but that tended to be more on the stealth missions than in the dog-fights.

Released at £30, you might as well stick with the budget *WC*, but we found the game being sold for only £13 in FutureZone, which is much more tempting. Especially since when you've finished with it, you've got ten spare floppy disks out of it.

Left: The spacedock itself and inside it. A bit limited and not exactly spacious.

THE BORING BITS

I know what criticisms are going to be made of this game, so here's a boring bit that states the defence. A ten disk hard drive only A1200 port from the PC smacks of poor and sloppy PC programming being brought to the Amiga. However, the fact that the ten disks expand to only

13Mbs of hard drive space made me take a look at the files, because that's a pretty poor compression rate for badly optimised code. The real reason isn't poor programming, but the massive animation files and huge speech samples that can go on for nearly a minute.

All the rendered anim interludes

have full speech and full colour animations and samples take up a huge amount of space, but don't compress particularly well.

The ten disks are down to this and not bad programming. In fact, the game uses the neat trick of rebooting the system when you start the game in order to free up as much memory as possible.

STAR CRUSADER

- Publisher
- GameTek 01753 553445
- Price
- £29.99 (but see review)
- Versions
- A1200/A4000
- System requirements
- A1200 with hard drive (extra memory recommended)
- Release date
- Out now
- Graphics 7 out of 10
- Decent anims and the actual game is as good as could be expected, although it looks PCish.
- Sound 8 out of 10
- The laser fire is irritating as is the engine sound, but the sampled computer and voices are spot on.
- Addiction 6 out of 10

Good for *WC* fans, but is too limited for a "non-linear" game.

Playability 6 out of 10

Easy enough to get into and controls pretty well.

Overall verdict

If designed for the Amiga, it could have offered much more, but as a port, it's acceptable if a little dated.

Graeme Sandiford limbers up and practices his flying back flips. Its...

Super Street Fighter 2 Turbo

One of the many annoying glitches - the fighter's off the right of the screen.

After nearly a decade of development and refinement the *Street Fighter* series is revered by many an arcade-going pugilist as the ultimate beat-em-up. Indeed, a whole sub-culture has sprung up around the globe complete with its own dialect and rules of conduct. There have even been reports of real fights breaking out in arcades in America and the far east over cheap tactics in the game.

Like many true gaming sensations, the success of this grand-daddy of beat-em-ups is based on several factors. These include unique characters with their own distinctive fighting styles, strengths and trademark special moves and a finely-tuned game engine that enables players to develop their own fighting styles and strategies.

The fact that *Super Street Fighter 2 Turbo* has actually made it to the Amiga is one in the eye for several species of console-

owner as it has only been released for PC and 3D0. Grudgingly, it must be admitted that the PC conversion was almost arcade-perfect and as the Amiga version is being published by the same company, Gametek, there seems to be just cause to expect another surprisingly good conversion.

Super Street Fighter 2 Turbo, also known as *Street Fighter X* in Japan, is the follow up to *Super Street Fighter 2* (88% in *AF75*) and contains the characters of its predecessor. It would seem the guys and gals have been busy honing their deadly skills, as each character, except Sagat for some reason, has new moves. Each character also has a Super gauge at the bottom of the screen which registers their accumulated Super power. When the Super gauge is full they can then let rip with a devastating Super combo by performing a super motion on their joystick or pad.

THE ANCIENT ONE

There is also a new hidden character who goes by the names of Akuma, Gouki and The Ancient One. He's a bit of bad-hat, after learning a secret killing technique from Ken and Ryu's teacher he killed him, presumably with said technique, and now roams the world beating people up to prove how hard he is - sounds a little insecure to me. He's kinda like a souped-up version of Ken and Ryu and has the added ability of shooting fireballs while in the air and gliding mysteriously across the screen to avoid attacks - spooky.

For some strange reason Gametek

Bison has more trouble with his uniform.

seemed a bit reluctant to send us a copy of the game so we had to pop into the local Electronics Boutique to purchase one. The first thing you notice about the game, even before you get it home, is the weight of the box. The reason for this is the 11 disks the game comes on which takes quite some time to install.

Another noteworthy fact about this game is that you need a hard disk - an accelerator and Fast RAM is highly recommended.

The reason for the high number of disks becomes apparent once the

Dhalsim manages to hit Chun Li without actually touching her.

Ken cruelly disregards Bison's pleas for help after his new uniform catches fire.

Sagat lets rip with his patented turning yellow and crashing the computer super move.

Ryu unleashes his lethal foot-tickling fireball, which renders DeeJay helpless.

you clues to your opponents next move, they also play an integral part in combos and general tactics. It's not nice to face an opponent who, instead of going through several frames of a reeling backward animation after a fierce blow, hits you back before you can follow through with your favourite combo.

That Ken is such cad - this is only his first date with Cammy.

The sound is unbelievably poor, especially as all the sound effects needed were a few cheap and cheerful tunes for each of the characters background and some meaty thumping and kicking sounds. Instead there is no background music whatsoever and each time a character is hit you hear a sound like someone hitting a cabbage with a ruler.

Super Street Fighter 2 Turbo may have fixed some of the inadequacies of its predecessor, such as the abysmal graphics, but, it has now been robbed of its best feature - its playability. The sole redeeming factor about the whole game is that it only cost £10.

game is loaded as the graphics are quite simply stunning. The backgrounds are at least as good as the PC version and character sprites are nice and big without the washed out look of *Super Street Fighter 2*.

Unfortunately they don't look so good when animated. For some reason, probably a cheap and quick solution for the slow-down caused by the large sprites, the animation frames seem to have been halved. This results in characters that jerk around the screen as if being subjected to random electric shocks.

Aside from looking ugly this can cause real problems - there is nothing more annoying than being in a fight and having an opponent's fist or foot appear from nowhere in the middle of your mush. This in itself is a pain in the neck, but it also throws the excellent *Street Fighter* game engine out of whack. Experienced *Street Fighters* have a surprising awareness of the games technicalities. The animation frames play an important part in *Street Fighter*. They not only give

Sagat practices his circus training skills on Blanka.

Release date

Out now

Graphics 9 out of 10

Beautiful backgrounds and big sprites galore.

Sound 4 out of 10

Worse than any cheap kung fu film you've ever seen.

Addiction 4 out of 10

The difficulty settings are too high to make it enjoyable for most people.

Playability 3 out of 10

One of the most playable games ever - butchered mercilessly.

Overall verdict

If you like Street Fighter this game will reduce you to tears.

61%

■ each time a character is hit you hear a sound like someone hitting a cabbage with a ruler.

PROFESSIONAL MIDI KEYBOARD & INTERFACE DEAL!

Full size velocity sensitive Midi keyboard
PLUS Midi Master professional
Midi interface. Total Package!!

ONLY £99.99

KEYBOARD + MIDIMASTER + FREE MIDI CABLES

MIDI MASTER PROFESSIONAL MIDI INTERFACE

NEW LOW PRICE

FULL FEATURE MIDI INTERFACE

MIDI MASTER AVAILABLE SEPARATELY
£19.99

- ▲ Full specification Midi In, Midi Thru and Three Midi out sockets.
- ▲ Stylish case to match Amiga colours
- ▲ Fully Opto Isolated.
- ▲ Compatible with ALL leading music packages.

FULL MIDI SPECIFICATION:

- 49 Standard size, velocity sensitive keys with 10 velocity curves.
- Supports all assignable Midi controller messages.
- Supports all program numbers numbers & bank change messages.
- Programmable channel pressure & velocity.
- Pitch bend wheel.
- 6 user programmable "Program & Bank Change" memory.
- 805x208x87mm.
- Transpose up to full range of 109 keys.
- Standard MIDI out 5 pin Din.

MONITORING TABLET
NOW ONLY £99.99

AS AN ALTERNATIVE TO THE STYLUS INPUT THE GENIUS TABLET ALSO HAS OPTIONAL FOUR BUTTON PUCK.

GENIUS PUCK £29.99

- ▲ With the Amiga Genitiser Graphic Tablet you can streamline the operation of most graphic or CAD programs.
- ▲ The Genitiser Graphic Tablet utilises latest technology to offer up to 1000 dpi resolution at the tip of a stylus.
- ▲ Complete 9"x6" digitizing area plus super accurate stylus combine to enable fast, accurate and easy control.
- ▲ Works by "mouse emulation" so the Genitiser will work with most packages where mouse input is the usual method-Deluxe Paint, Photon Paint, CAD Packages, etc.
- ▲ Supplied with template for Deluxe Paint..
- ▲ This is the input method used on professional systems.

- ▲ Fast input of drawing by "tracking" is made easy - plus "absolute reference" means you can move around the screen many times faster than by a mouse.
- ▲ The Genitiser fits in the serial port of your Amiga 500/500+/600/1200/1500/2000 and "co-exists" with mouse.
- ▲ Unlike a mouse, the tablet gives absolute co-ordinates so that tracking and menu selections are possible from the tablet face.

FREE PC INSTALLATION PACK
IF YOU BUY A GENIUS TABLET SYSTEM FOR YOUR AMIGA YOU WILL ALSO RECEIVE SOFTWARE AND MANUALS FOR INSTALLATION ON A PC. ABSOLUTELY FREE!

£44.99 3 times the power of a standard power supply

GOLIATH HAS THE POWER

Goliath is a direct power supply replacement with a difference! If you have an Amiga with a large harddrive, extra memory, accelerator board or indeed any powerful add-on then a standard Amiga power supply just cannot cope. The Goliath packs more

- ▲ Fan cooled.
- ▲ Heavy duty case.
- ▲ Switch mode electronic system.
- ▲ Full 200 watt output.

- ▲ On/Off switch.
- ▲ 13 Amp uk approved mains lead.
- ▲ Direct plug-in replacement.
- ▲ Also available for cd 32.

AMAZING 200 WATTS OUTPUT!

THE ANSWER TO ALL YOUR DISK BACKUP PROBLEMS

SYNCR0 EXPRESS is a sophisticated hardware and software package that works by directly controlling your second drive as a slave device ignoring the Amiga's own disk drive controller. This way SYNCR0 EXPRESS delivers power to backup programs, when other backup systems fail.

- ▲ The most powerful disk backup system ever conceived.
- ▲ Very simple to use requires no user interface.
- ▲ Powerful "SYNCR0 MODE" actually synchronises your drives to achieve even greater backup power!
- ▲ Menu driven selection of start/end track. Upto 85 tracks.
- ▲ Totally "transparent" hardware switches out automatically when not in use.

It is illegal to make copies, even for your own use, of copyright material, without the given permission of the copyright owner, or the licensee thereof.

GET STARTED

Multimedia At Its Best!

- ✓ Simple and Easy-to-use
- ✓ Educating and Informative
- ✓ Entertaining and Exciting
- ✓ Powerful and Amazing!

Main Contents List:

The History of the Amiga

Who invented it? The old Commodore, its bosses, ideas, mistakes etc. The Escorn rival and much more.

Amiga Environment

What is your Amiga? Why is it so special? What is the scene? Who are Amiga Technologies and what do they do?

Amiga Hardware

Inside, outside, ports, chips all explained

Workbench and DOS

What is it? Using it. Data and file management, Workbench environment tips, the CLI, advanced WB and CLI tricks

Programming

AMOS, Blitz, assembly, C, Amiga E and AREXX examined

Become an Artist Overnight

Raytracing, 3D, animation, bitmap drawing analysed

Become an Amiga Music Maestro

Octamed explained, MIDI discussed, musicians interviewed

Getting Your Words into Print

Word processing, Desk Top Publishing, Printers, Clipart etc

Surfing the Super Information Highway

Intro to the Internet, Surfing the Internet, WWW design, Amiga Internet Providers, Amiga Internet software. The Amiga Technologies Internet pack taken for a test drive.

General Arena

Emulation, Operating Systems, Storage Systems, Amiga in Business, Multimedia etc etc etc

The Amiga Future

Where is the Amiga going? Amiga Technologies' plans, Amiga visions, possible industry comments. Amiga "Visions" - the companies that will bring us innovative products in 1996. We interview Intersect Developments, Fields of Vision and more.

And Finally

Credits, thanks and anything we have forgotten!

The world's first truly AGA multimedia, interactive compact disc. Designed for beginners, new users through to intermediate (and higher!) levels, it helps an Amiga user understand more about their computer and what it is capable of. Covers many subjects from raytracing to the Internet and from programming to music. Many 'well-known' experts and Amiga-buffs are contributing to this CD. They offer help, answers, tips, tricks and more. Want to know how the experts create a WWW page? Global Internet show how! Stuck using Internet software? John Kennedy explains all. Also contains forums, opinions and a look to the future with top Amiga developers. Comes with a FREE bonus beginners section with commercial programs, commercial demos and all the PD you need to Get Started, all ready-to-run. If you have an AGA Amiga with a CD player, then get this. PC multimedia CD's are here!

Above are four screen grabs from an early version of the Get Started CD interface: The main page, 256 colour windows, the floating dictionary and an animation example.

Also!

- Full version of DOpus v4
- Full version of Octamed v5.04
- Other full programs (TBC)
- 'Test Drive', exclusive version of Wordworth 3
- Limited Version of PPaint v6.4
- 'Get Connected' to the Internet - all you need, all ready to go!
- Essential PD to Get Started!
- Exclusive stuff from various user groups and companies!

And Starring!

ADVANCED AMIGAGUIDE - AAG

- Fast Rendering of 8 bit (256 colour) Images
practically instantaneous display of 256 colour pictures even on stock 020 Amiga. There can be more than one 256 image displayed at one time with the palette share.
- Is a Stand-alone Platform Unlike Other "Hypertext" Products (HTML Language etc)
does not need other programs such as MUI or AmTCP to run
- Allows Text, Picture and Gadget Links as Opposed to it's Pre-decessor
click on a picture or animated gadget and move to another page. Retrace back to your original position.
- Allows the use of Sub-Modules Runnable as Commands
for instance, play and show an animation as a command by clicking on a button! The commands can allow you to "link" to anything and anywhere. Click a link and enable the dictionary etc.
- Multiple Fonts & Add Colour from 256 Colour Palette
you can use as many different fonts as you like. Just use the normal Amiga bitmap fonts in any size! You can also add colour to the text from a palette of 256 colours. Highlight a word - add colour. Highlight different links - add colour!
- Super Bitmap Window
 cater for AmigaGuide files which take up more lines than is available
- Downward Compatibility
is able to read old AmigaGuide format (and soon HTML pages)
- Drawing Tools
AAG allows you to create lines, boxes, circles and colour them by using simple commands such as @DRAW 10,40,25-60 or @LINE 10,30,35 - using co-ordinates and lengths.

Advanced AmigaGuide (or AAG) is the language that resides behind the Get Started interface. It offers many enhanced and powerful features over the old AmigaGuide language. To the left of this box is a list of the features AAG contains. AAG could be used in a multimedia product, interface front-end, on-line help program, disk magazine and much more. Contact us for licence details. AAG should be available by May/June 1996.

AAG - GUI OS VERSION

Advanced AmigaGuide (AAG) can be a direct replacement for the current AmigaGuide. In a native OS GUI version it looks very similar to the existing format, however it is very different. The language allows more flexibility such as the co-ordination of text, images and gadgets in upto 256 colours and can add more powerful features such as HTML decoding or use of multiple fonts on a page. AAG can also read old AmigaGuide files. It also uses the same techniques for writing "GUIDE" files (see second picture): @NODE, @LINK, @COMMAND etc are the same as the old format, but new commands have been added such as @IMAGE, @REM, @MOD, @SECTION, @PAGE, @COLOUR, @BOX, @DRAW, @LINE, @GOTO, @CENTRE etc etc. This allows the user to quickly understand the simplicity of writing the documents/pages.

'ALL YOU NEED' SECTION

The 'all-you-need' section contains a carefully selected collection of read-to-run material; this section encompasses full (or limited) commercial programs such as Octamed v5.04, Personal Paint 6, Directory Opus 4 and Wordworth 'Test-Drive' with commercial demos and superb public domain as chosen by Ground Zero. There are exclusive collections from M.U.G., the Imagine Users Group, MIDICraft, AMOSzine authors and Cloanto. The PD contents are highlighted and examined within the Get Started interface. There is also a superb "Get Connected" area: all you need, ready-to-run/install (all explained in the Get Started interface!) to get onto the Internet. Global Internet will be providing the access, so immediate 'net surfing'. There are many more reasons to buy Get Started - it's like 3 CD's in 1 - Multimedia CD, Internet Software CD, Commercial Software!

The Get Started CD should be available from most good CD mail order and high street Amiga retailers. All rights reserved. Contents may be subject to change.

Out March 1996 German version due early April.
[AGA Machines] £29.99

zoom

It's HERE! Zoom release 2 - now in ready-to-run and DMS format! Do you want the latest PD CD-Rom that contains the latest PD to January 1996? Contains the greatest and latest PD from two superb PD libraries. The interface must be the most easy to use CD interface on any CD. Coded by the co-author of the superb new Get Started CD - just point, read about the disk and click to extract. Superb and very easy to use. The contents have also been updated so you get all the latest PD until early January 1996 and loads more as listed opposite. Comes with an on-line help routine, multitasking search routine and hotkeys function. If you want 650MB's of the latest PD, then look here! Two formats - ready-to-run and the DMS format (for shops etc). The pictures below show the enhanced DMS interface in action.

Superb value CD-Rom at only £19.99 **NEW!**

NEW! READY TO RUN & DMS

NEW to ZOOM release 2 is the easy-to-use, ready-to-run format as first demonstrated in NFA AGA Experience. Allows the direct use of PD straight from the CD-ROM!

F1 LICENCEWARE volume one - F1-01 to F1-100

Sick of the run-of-the-mill old PD CD releases containing collections from pre-1995? This CD contains the complete collection of F1 Licenceware titles from F1-001 to F1-100. Over 100 titles or more than 200 disks! This CD is worth well over £500, if the disks were bought separately. There is something for everyone on the CD - games, utilities, tools, professional clipart and music, beginners guides, educational programs and much more. Some superb material is contained within this CD-Rom: Blackboard v3 (image manipulation), Ultimate Quiz 2 (general quiz), Word Plus Pro (originally valued at £15), Fortress (strategy God game), Relics of Deldroneye (voted best PD game ever by Amiga Format), ERIC (voted second best PD game ever), Powerbase (database program), GRAC (superb 'Monkey Island' style adventure game creator with 000's of copies sold on floppy), Introduction to WB (best selling F1 Title), Absolute Beginners Guide to AMOS, Junior Artist (kids paint package) or Tots Time (one of many kids educational programs). Use some of the professional music within your games, with no extra charges. What about the clipart for your DTP documents? AMOS programmers have a field day with this CD - AMOSzine, guide to AMOS and AMOS supplements. Something for everyone. With a very easy to use AmigaGuide© interface with 80% of the programs running straight from the CD. Remember that the programs are commercial, with copyright owned by F1 Licenceware. All programmers receive a royalty for every CD sold.

£32.99

COMMERCIAL SOFTWARE - NOT PD!

Puff Puff, Chuff Chuff, has Thomas been done justice or is he in a huff. Find out below while we kill **Steve McGill**.

Thomas the Tank Engine CD32

Toby is the little git who keeps all the axle grease.

innovative. It's all been seen before, only better." With *Thomas the Tank Pinball*, it's all been seen before in *Pinball Mania*, only less so.

But then things have to be put into perspective. Thomas isn't aimed at adults. It's aimed at kids. Not only is it aimed at kids, it's aimed at young kids of three and up.

Much of the appeal of the game isn't going to be in the particular mechanics used to mimic a game of pinball, the appeal lies in the vibrant graphics, the music and the sociability of child/adult interaction.

Up to eight kids can play against each other or against adults and part of the fun when playing against a five year old is pointing out to them the lights they should hit. When they manage to do so, praising them and cheering has an uplifting effect. Just as effective is letting the ball drop down the middle when it's your turn and then feigning disappointment. It all adds to the fun.

The biggest disappointment is that the game doesn't play as well as it could: The box reports that there are three difficulty levels. Unless you play it on the easiest though the going's too hard.

It's impossible to get the ball to the top of the table except by accident and the flippers don't seem to send the ball in the direction they should, thus rendering *Thomas* more a game of luck than of any learnable skill.

If your kid loves Thomas and they're under the age of six, go for it. In moderate usage the game is an entertaining and fun package. It's just that it's appeal is much more limited than it should be. Pity.

Percy. What sort of a name is that?

The one thing that amazed us about Sarah Ferguson after her debt was revealed to the world was that she didn't come up with the idea of Budgie the Tank Engine.

Give kids anything to do with Thomas the Tank Engine and they'll happily play with it all day.

Thomas has become the John Travolta of the toddler set. With a toot toot and a hi diddle hey.

Thomas's enduring popularity with children of many different generations means that the acid test of *Thomas The Tank Engine Pinball* has to be letting one of the Thomas The Tank cognoscenti loose onto the game.

Unleashing my five year old niece was an education in itself. Tasks have been deliberately limited so there are fewer rows of lights and sequences for high score bonuses. Some would say this restriction is detrimental to the game. Whatever you might think this restriction is real and slightly disturbing.

Thomas has been programmed by Spidersoft, the creators of the lacklustre *Pinball Mania*. In *AF77* we gave *Pinball Mania* 76% and the verdict; "Nothing flash. Nothing

■ The appeal lies in the vibrant graphics, the music and the sociability...

TEXTURE PORTFOLIO

£29.99

This collection of textures has taken a staggering 5 years to complete. Phantasmagoria are a professional graphics company, based in Bristol. They have been providing textures and backgrounds for video, ray-tracing etc. This CD consists of 500+ 24Bit backgrounds and textures, it includes the very high quality 24Bit JPEG files for video, graphics and multimedia work, Targa's for PC raytracing and GIF format for video titling applications. The various sections include Abstract - Phantasmagoria, Abstract - Oil Paints, Abstract - Mixed, Animal Skins, Clouds, Fire, Food, Masonry, Rock, Metal (6 sub-sections), Water, Wood Bark, Wood Grain, Miscellaneous. No wasted space on this CD-Rom - a collection of extensive tutorials. This CD comes with a full colour multi-page reference booklet for every single texture. An ideal complement to a raytracing CD such as Light Rom 3 etc. **Please note that all these textures are exclusive to this CD-Rom and cannot be found on any other collection.**

LIGHT ROM VOLUME 3

£38.99

Light Rom 3 is the most ambitious issue to date, consisting of 3 CD Rom's. Rom 1 is filled with thousands of Lightwave objects and scene files, building upon previous issues. Rom 2 contains huge collections of 3D objects in different file formats including Imagine (175MB's), 3D Studio (100MB's), Sculpt (30MB's) and Real 3D (7MB's). It also includes 700 textures in the JPEG format and a Video Toaster directory with wipes and CG fonts. Rom 2 also has a collection of 3D landscapes in the Lightwave, Imagine and 3D Studio file formats and a collection of useful Amiga and PC PD programs. Rom 3 is a "DEM ROM", a bonus CD-Rom containing over 1000 digital elevation maps for use with VistaPro, Scenary Animator and World Construction Set (available from Blittersoft) on any platform. All Lightwave objects, textures and DEMs on this collection are represented with thumbnail renderings. Michael Meshew, the author of Light Rom 1, 2 and 3, has produced a CD that offers the World artistic talent for a reasonable price.

SALE Texture Portfolio & Light Rom 3 for £49.99

NEW! SPACEBALLS present.....

Scene Storm is a glorious feast of tempting eye candy produced by the legendary SPACEBALLS. Amazing graphic and audio delights to show your friends what the Amiga can really do! This CD is packed with every major scene production from 1995, including all the releases from The Party 5 held in Xmas 95. Exclusive Digital Candy material is also included, ranging from music competition entries to complete Development suite. Scene Storm features an easy to use Magic Workbench interface that is simple to set up and a joy to use. Much of the contents of Scene Storm are presented as ready-to-run files through custom designed icons. No more trawling through archives and filling your hard disk with files. Includes: Productions from over 20 Scene Parties held throughout the world in 1995. All the best demos and intros from the last year, slideshows, music disks, the most popular disk mags and charts. Exclusive modules taken from the coolest demos as well as entries from Digital Candy BBS Music Competitions. A complete development suite that will allow you to learn how to code your own demos. Development utils are included along with exclusive and easy to follow source code. All purchasers of Scene Storm that own a modem can register to qualify for 3 months free downloading of the latest scene files from Digital Candy Bulletin Board. This would normally cost £15. This BBS is classed as the 'scene' board in the UK. Place your pre-order now as this will be the hottest selling CD throughout Europe!

ECS/AGA MIXED AVAILABLE END OF FEBRUARY £19.99

TEN ON TEN PACK

Amenet's 10th anniversary celebration. This CD contains 10000 C64 demos and over 600MB of software. Includes: 1. 2. 3. 4. 5. 6. 7. 8. 9. 10. 11. 12. 13. 14. 15. 16. 17. 18. 19. 20. 21. 22. 23. 24. 25. 26. 27. 28. 29. 30. 31. 32. 33. 34. 35. 36. 37. 38. 39. 40. 41. 42. 43. 44. 45. 46. 47. 48. 49. 50. 51. 52. 53. 54. 55. 56. 57. 58. 59. 60. 61. 62. 63. 64. 65. 66. 67. 68. 69. 70. 71. 72. 73. 74. 75. 76. 77. 78. 79. 80. 81. 82. 83. 84. 85. 86. 87. 88. 89. 90. 91. 92. 93. 94. 95. 96. 97. 98. 99. 100. 101. 102. 103. 104. 105. 106. 107. 108. 109. 110. 111. 112. 113. 114. 115. 116. 117. 118. 119. 120. 121. 122. 123. 124. 125. 126. 127. 128. 129. 130. 131. 132. 133. 134. 135. 136. 137. 138. 139. 140. 141. 142. 143. 144. 145. 146. 147. 148. 149. 150. 151. 152. 153. 154. 155. 156. 157. 158. 159. 160. 161. 162. 163. 164. 165. 166. 167. 168. 169. 170. 171. 172. 173. 174. 175. 176. 177. 178. 179. 180. 181. 182. 183. 184. 185. 186. 187. 188. 189. 190. 191. 192. 193. 194. 195. 196. 197. 198. 199. 200. 201. 202. 203. 204. 205. 206. 207. 208. 209. 210. 211. 212. 213. 214. 215. 216. 217. 218. 219. 220. 221. 222. 223. 224. 225. 226. 227. 228. 229. 230. 231. 232. 233. 234. 235. 236. 237. 238. 239. 240. 241. 242. 243. 244. 245. 246. 247. 248. 249. 250. 251. 252. 253. 254. 255. 256. 257. 258. 259. 260. 261. 262. 263. 264. 265. 266. 267. 268. 269. 270. 271. 272. 273. 274. 275. 276. 277. 278. 279. 280. 281. 282. 283. 284. 285. 286. 287. 288. 289. 290. 291. 292. 293. 294. 295. 296. 297. 298. 299. 300. 301. 302. 303. 304. 305. 306. 307. 308. 309. 310. 311. 312. 313. 314. 315. 316. 317. 318. 319. 320. 321. 322. 323. 324. 325. 326. 327. 328. 329. 330. 331. 332. 333. 334. 335. 336. 337. 338. 339. 340. 341. 342. 343. 344. 345. 346. 347. 348. 349. 350. 351. 352. 353. 354. 355. 356. 357. 358. 359. 360. 361. 362. 363. 364. 365. 366. 367. 368. 369. 370. 371. 372. 373. 374. 375. 376. 377. 378. 379. 380. 381. 382. 383. 384. 385. 386. 387. 388. 389. 390. 391. 392. 393. 394. 395. 396. 397. 398. 399. 400. 401. 402. 403. 404. 405. 406. 407. 408. 409. 410. 411. 412. 413. 414. 415. 416. 417. 418. 419. 420. 421. 422. 423. 424. 425. 426. 427. 428. 429. 430. 431. 432. 433. 434. 435. 436. 437. 438. 439. 440. 441. 442. 443. 444. 445. 446. 447. 448. 449. 450. 451. 452. 453. 454. 455. 456. 457. 458. 459. 460. 461. 462. 463. 464. 465. 466. 467. 468. 469. 470. 471. 472. 473. 474. 475. 476. 477. 478. 479. 480. 481. 482. 483. 484. 485. 486. 487. 488. 489. 490. 491. 492. 493. 494. 495. 496. 497. 498. 499. 500. 501. 502. 503. 504. 505. 506. 507. 508. 509. 510. 511. 512. 513. 514. 515. 516. 517. 518. 519. 520. 521. 522. 523. 524. 525. 526. 527. 528. 529. 530. 531. 532. 533. 534. 535. 536. 537. 538. 539. 540. 541. 542. 543. 544. 545. 546. 547. 548. 549. 550. 551. 552. 553. 554. 555. 556. 557. 558. 559. 560. 561. 562. 563. 564. 565. 566. 567. 568. 569. 570. 571. 572. 573. 574. 575. 576. 577. 578. 579. 580. 581. 582. 583. 584. 585. 586. 587. 588. 589. 590. 591. 592. 593. 594. 595. 596. 597. 598. 599. 600. 601. 602. 603. 604. 605. 606. 607. 608. 609. 610. 611. 612. 613. 614. 615. 616. 617. 618. 619. 620. 621. 622. 623. 624. 625. 626. 627. 628. 629. 630. 631. 632. 633. 634. 635. 636. 637. 638. 639. 640. 641. 642. 643. 644. 645. 646. 647. 648. 649. 650. 651. 652. 653. 654. 655. 656. 657. 658. 659. 660. 661. 662. 663. 664. 665. 666. 667. 668. 669. 670. 671. 672. 673. 674. 675. 676. 677. 678. 679. 680. 681. 682. 683. 684. 685. 686. 687. 688. 689. 690. 691. 692. 693. 694. 695. 696. 697. 698. 699. 700. 701. 702. 703. 704. 705. 706. 707. 708. 709. 710. 711. 712. 713. 714. 715. 716. 717. 718. 719. 720. 721. 722. 723. 724. 725. 726. 727. 728. 729. 730. 731. 732. 733. 734. 735. 736. 737. 738. 739. 740. 741. 742. 743. 744. 745. 74

Re-arm with Zephyr missiles and Zulu rockets then destroy everything...
 In *Wild Justice* more money means more lives...

GameBusters

Breathless:
 Above: If anyone finds a lava or acid pit that you can't escape from, please let us know.
 Left: *Alien Breed 3D II* should give *Breathless* a run for its money.

BREATHLESS

S. Ahmed from Manchester sent in the following access codes for the impressively mighty *Breathless*.

- World 1: No Code
- World 2: 181A59MRTR6999PD
- World 3: 181A59LRTR6999PT
- World 4: 181CEIDGLJRJSE4D

FRONTIER

Michael Newsham from Ipswich sent in the following handy hint for all *Elite 2* commanders who're finding it a bit cramped in their spacecraft.

- 1) Buy one ton of rubbish from any spacecraft.
- 2) Fly away from the spaceport
- 3) Display the cargo inventory screen (F3)
- 4) Click the left mouse button just

under the box for your rubbish.
 5) The computer will think that you have got rid of your rubbish and give you an extra ton of cargo space. But, you will still have the rubbish.
 6) Repeat steps four and five as many times as you like.

7) Fly to a spaceport and you will have lots of 'remaining' cabin space (though the display might be a little scrambled). As long as you have enough money you can buy almost anything for your ship.

NOTE: The display telling you how much cabin space left might be a bit scrambled. ie. It might say that you have 653 tons of space left but you will only actually have the amount of space equal to the number of times that you clicked the mouse.

ALIEN BREED 3D

A mysterious person calling themselves GBH sent in the following level access codes for *Alien Breed 3D*. Only this time, rather than simply being personal codes, they allow the player to start each level with all weapons available with full ammunition and max energy.

- LEVEL
- 2: KOKO FNKP PPKF FFKF
 - 3: OKKO FHKP PPKF FFKF
 - 4: KPKO FPKP PPKF FFKF
 - 5: PLKK NFKP PHKN FFKF
 - 6: POKK NNKP PHKN FFKF
 - 7: KKKO NHKP PHKN FFKF
 - 8: PPKK NPKP PHKN FFKF

Continued overleaf ➡

Breathless: Wayward flatulence can catch the best of us out at the worst times.

Alien Breed 3D: All weapons, full ammunition, and maximum energy can be yours.

Frontier: More little cheats and bugs than you could throw rubbish at.

HELPING HAND

A CURSED BALANCE

In Curse of Enchantia, I know that I've got to find something in the Seesaw room but so far I've had no luck. Can you help?

Kev MacHallam
Perth

Attach the plank to the boulder, throw the monitor onto the plank and you'll be catapulted onto the higher rock where you'll find a magnet.

REACHING FOR THE PARASOL STARS

I've recently acquired cutey platform classic Parasol Stars. Are there any cheats for it?

W. Boyd
Harrogate

Type 'CYNIX' during the game and then press...

M - to get all three stars

G - to kill all the

baddies on the

screen

C - for an extra credit

D - to die

X - to skip to extra

level

T - to end the stage

1 to 7 to skip stages

F1 to F10 - to skip

levels

B - to skip to bonus screen

This cheat won't let you onto the last two levels though.

LIBERTY FOR ALL

I don't want a complete solution or anything, but do you know any helpful cheats for Liberation: Captive 2?

I. Bardanni
Leicester

Some items can be bought for a fraction of their correct price simply by expressing an interest in making a purchase, locating a credit card with less money on it than the price of the selected item and handing over the card.

- 15 LKKO PHKP PHKN FFKF
- 16 OPKO PPKP PHKN FFKF

CHAMPIONSHIP MANAGER

Kevin Edwards from Wirral reckons that he's got the best gameplaying strategy for the excellent *Championship Manager* on the Amiga. The best formation to use is 4, 3, 1, 2.

Using a continental style, use 2 centre backs, 2 fullbacks, 3 centre midfielders, a support man, and 2 centre forwards. This will work on all the editions of *Championship Manager*. Stick to this method and your team should always finish at

least 20 points ahead of every other team not using the same formation.

Average player ratings should also be exceptionally high. Ratings have a bearing on the next season's player

Championship Manager: Graeme of course, would use the sweeper system and lose all the time into the bargain.

Week 13 Season 1

Championship Manager: Bring young players on for at least 10 games a season.

Theme Park A500: Calling Mark Lamport. Calling Mark Lamport. Come in, your time's up. You're a cheat and a scoundrel.

value. It can be used to advantage when bringing through young players. Bring them on for 10 games a season when your team is winning about 4-0. This results in their rating finishing around 9-80. The following season the youngster's value should rocket - keep doing this until he is worth around £4-5 million then give him more first team starts. Using this method Kevin managed to transform Ryan Giggs from a 3 million rookie into a 29 million mega star.

When buying players, go for those that are either thoughtful, responsible, or confident. They tend to play better. When looking at the player's statistics, go for those with consistently high stats, not those with even mixtures of 1's and 20's.

Here are examples of the best players; English version - Redknapp, Giggs, Bosnich, Collis, Clough, and Sharpe.

Italian Version - Asprilla, Maldini, both Baggio's, Desailly, Panucci, Ferrara, Fonseca, Giggs, and Melli.

Upon starting a new game look through all the cheaper players as their stats change with every game.

For those who still don't know the cheat, whenever an outfield player reaches 30 (34 for a goalkeeper), sell him at the end of the season.

Make sure he is insured and increase his value as much as possible. Next season, after the player retires, your bank balance will be show a healthy improvement.

As an example of what can be achieved using this guide, here are some of Kevin's records.
Best Bank Balance = £70 million
Record number of goals from a centre forward; Cantona (80), a support man, Asprilla (47), centre midfield, Zaini (39), a full back, Finetti (28) and a centre back, Galente (19).

THEME PARK A500

Stewart Priest of Glasgow has sent in the following cheat for the A500 version of *Theme Park*.

Enter your name as MARK LAMPOR

Enter your nickname as MARKL

Now when you start the game, press and hold down C.

A message window will appear saying: "MARK LAMPOR HAS CHEATED".

Look down at the money box and you will see the amount of money rising. When you reach the required amount of money, let go of the C key. Then:

Press Shift & Z and Alt & Z to get all the rides and shops.

THROUGH YOUR BAD PARK PLANNING ONE OF THE LITTLE PEOPLE HAS GOT COMPLETELY STUCK. FIND OUT WHERE AND HELP THEM

Theme Park A500: Money obtained by cheating will never help your design skills.

SIMCITY 2000

Christopher Page from Derbyshire has found a way to acquire large amounts of money for *SimCity 2000*. All that is required is a Hex editor and a modicum of knowledge about how Hex numbers work: begin the game as usual, start a new city (or edit the map then start) and play as usual until your cash becomes negative.

Note the cash on a piece of paper, save the game and exit *SimCity 2000*. Load the saved game into a Hex editor (like *NewZap* from coverdisk issue 57).

This is where the hard bit comes in: convert the cash you had into the equivalent long word, two's complement hex value (many scientific calculators do this). For example: -100 is FFFFFFF9C in hex.

Once you have the number converted find it in the file with the Hex editor (it should be near the start, usually the second or third line in *NewZap*).

Replace the four bytes with your required cash (in +hex of course) then save the file. Be warned, this can completely mess up your file if you change the wrong bytes. Make a backup of the unchanged file before you start editing. If the file doesn't load, or the computer crashes, try editing the file again.

ZEEWOLF 2: WILD JUSTICE

Trenton Webb of Binary Asylum sent in these handy hints for *Zeewolf 2*. We've split the tips into two and will print the rest next month.

Dollars

1. Every \$250,000 earned in *Zeewolf 2* is rewarded with an extra life. These are only of use in continuous play, but for tackling the trickier levels, a few extra lives never go amiss. Here are some hints to help you build your bank balance:

2. Always, always, always re-arm with Zephyr missiles and Zulu rockets before completing missions. These count towards your UNUSED WEAPONS BONUS. So, fulfil all but one of your mission objectives and then raid the level's Camels so that the *Zeewolf* finishes the level with as close to a maximum compliment of weapons as possible.

3. Cannon rounds don't count as part of the UNUSED WEAPONS BONUS, so use all the cannon shells available to destroy as many objects - buildings, non-mission component enemies etc. If you've enough spare cannon destroy everything (except trees) on a level.

4. On most levels there are spare POWs for armour refresh purposes. Even if you do not need armour

refresh, rescue the men to earn \$5,000 per POW.

5. There are often more men available for rescue than are required for the completion of your mission. On these missions rescue them all to boost your HUMANITARIAN BONUS. Do not leave the rescue of extra men as the last part of your mission. The level will only be completed when the required man steps into the doorway and any extras left standing outside will not count towards your bonus.

6. An easy way to get a high unused weapons bonus on REMOTE LINK levels is to ensure that you use all the munitions available on the remote link craft. Their weapons are not recorded in the scoring systems but what they destroy is.

7. Ecliptico landing craft, TERRAPINS shot in the water earn \$4,000. Terrapins that have been allowed to disgorge their payload still earn \$4,000 but you also get points for their cargo - a minimum of \$4,000.

8. Extra lives are also available by rescuing abandoned *Zeewolves*. These can be found in deserted bases on missions 13 and 18, see the maps below for their locations. One is also found on 31 but it's part of the mission. When these are dropped back at your base/carrier an extra life will be awarded.

Zeewolf 2: Wild Justice: Near the end of a mission, shoot everything up with the cannon and save those dollars towards an extra life.

■ Even if you do not need armour refresh, rescue the men to earn \$5,000 per POW.

Zeewolf 2: Wild Justice: A game everyone should play.

The first time you try, the transaction will be refused. Offer it again and it'll be accepted. Some credits will be deducted and the card will be handed back. This works best with Underworld dealers. Expect goods to get more expensive in later levels.

HARDY HAR HAR. LET'S FLY

My brother loves playing *Fly Harder* but gets terribly frustrated at his lack of progress. How about the codes for some of the later levels.

M. Busby
Manchester

- Level two - PHOTON
- Level three - METAGRAV
- Level four - BLACKHOLE
- Level five - SUPERNOVA
- Level six - TRANSMITTER
- Level seven - QUANT
- Level eight - NEOGEOPOWER

If you're playing it on the CD32 version (which you forgot to mention) then you need only enter the first three letters for each level.

CHEATING FODDER "TRY AGAIN"

I need help on Mission eight of Cannon Fodder. I've tried a million times and still had no luck.

P. Noad
Hants

To increase the ranks and abilities of your little blokes, head to the save game option. When asked for name enter as follows:

JOLS

You should now see a flashing message "Cheat Mode Active". If not, try again until you get it right.

Software Established 1990 Expressions

Introducing some of the best public domain & shareware software. These are high-quality freely distributable disks at a fraction of commercial prices.

All disks are compatible for A500/A500+/A600/A1200, except (N) which indicates not compatible for 1200

PD Select

MAGIC 64

C64 Emulator

By..... **Michael Kramer**
 Ware **Shareware**
 PD Library..... **Network**
 No of Disks **One**

Commodore 64 emulators are now commonplace in the PD scene, but to find one that gives the real C64 a run for it's money is a rare thing. While many emulators require games and a real C64 ROM this one is 'ready to run' and includes one of my all time fave games, *Bubble Bobble!* In order to get the full pleasure you will need a 68030-40 processor, although it will happily chug along on a 68020 (1200). You will also need 1.7 MEGs of free memory to run it, because it has to load the ROMs into memory.

BRAINCELL DEMO

DEMO

By..... **Various**
 Ware **Freeware**
 PD Library **17 Bit Software**
 No of disks..... **One**
 Price **£1.50**

A demo is often a boring affair, with lots of text and very little happening. But sometimes some rebellious coder breaks the chains and brings you a rush of images and sound. *Braincell*.

Magic 64: C 64 days revisited, with the still excellent *Bubble Bobble!*

starts with a superb flying tunnel, and then carries this on in different colours and directions at an often mindblowing pace. It's backed by a pumping techno soundtrack and is an essential buy for all techno and graphic freaks.

GRAPHIC WORKBENCH

Icons

By..... **TMC**
 Ware **Shareware**
 PD Library **17 Bit Software**
 No of disks..... **Two**
 Price..... **£1per disk + 50p p&p**

Ever wanted Baywatch on your Workbench, or the X-Files appearing every time you boot up? Then these collections of icons are what you need. Accompanied by backdrops, the images are 256 colours and very well digitised. Most of the collections feature a Hi-Res picture and several

Graphic Workbench: Spruce up your desktop with your own favourite interest.

icons on the subject for your partitions and default icons. Unfortunately the icons get their colours from the pictures so you have to use the image, in order to use the icons.

FLAVOUR DEMO AGA

DEMO

By..... **Various**
 Ware **Freeware**
 PD Library **OnLine**
 No of disks..... **One**
 Price **75p per disk + 50p p&p**

If you've seen the new Playstation you must have seen the game intros with those impressive texture mapped images in full rendered 3D. The effects in this demo resemble these sequences with superb spinning texture mapped objects, that look stunning.

Unfortunately they don't last too long but at least they put the AGA to a level it deserves. The music also has a pumping bass that accompanies the effects with tremendous style.

Continued overleaf →

Flavour Demo: Effects that even make the Playstation tremble, believe me!

Braincell Demo: Tripped out tunnels to make your Braincells rot!

PD Selection of the month

HELLSPAWN

BySteve Arnott
 WareLicenceware
 PD Library9th Level Publications
 No of DisksFive
 Price£5

Comics are something that can appeal to people of all ages, from Viz to Beano. This one is aimed specifically at the adult audience. The comic on disk uses a crude system of having the viewer load each picture, but there are some excellent quality AGA images. The story is about a group of demonic superheroes sent to create Hell on Earth. It sounds corny but gives way for an amusing and bloody comic, beginning with a monster on the David Letterman show! The artwork is flawless, showing tremendous detail and accompanied by a dark soundtrack. This will be a monthly comic priced at five pounds (inc P&P), which is actually very good value because it works out at £1 per disk. Again, note that there are some graphic (in the other sense of the word) scenes.

Dark Fiction: Dark images for dark stories, not for the squeamish.

DARK FICTION

ByVarious
 WareFreeware
 PD LibrarySaddletramps
 No of disks.....One
 Price.....80p

Abyss' intro:
 It may not have won but it was just as good.

As the title suggests this is a collection

of stories, falling into the horror genre. These grizzly stories are written in a 'Creepshow' style and presented in a book-like interface.

The titles range from 'Cry' to 'Urban Horror' all with plenty of strange goings on that bloodthirsty horror fans will adore. There are several stories that contain language that could offend, but this has to be expected in this type of writing.

THE PARTY 5 - 40K INTROS

DEMOS

WareFreeware
 AGA, some work better with fastmem.
 Available on the Internet via ftp from the Papa demo archive:
<ftp://41s20.ira.uha.de/pub/TheParty95/intros/>

Following on from last month's Party 5 demo reviews, this month we take a look at what the 40k intro competition had to offer. What delights can demo scene whizkids fit into 40960 bytes?

The disadvantage of 40k intros is that there's no real room for spectacularly pixelated pictures or extravagantly sampled guitar tunes: blocky logos and beepy 'chip'-tunes tend to predominate. On the other

hand though, there's plenty of room to concentrate on spectacular code and design work. The biggest advantage being that you can fit at least 20 intros on one disc. Compare that to the one demo you get normally - more bounce to the ounce, more splash for your cash!

The winning intro, was *Creep*, by the Artwork & Polka Brothers. It featured some smart, phong-shaded vector objects, as well as nice distortion effects and a superlative light-sourced, metallic ring.

Headcase by Axis, placed second, opted for the ambient approach, with some more of the increasingly ubiquitous donuts, swirling over a mandelbrot background and an original real-time explosion effect.

Meanwhile, the third-ranking intro, *Free Your Mind*, by Scoopex, has a nice approximation to a famous PC demo, with a face struggling to break through a distorting vector block.

A lot of the lower-placed intros were just as excellent, if not better than these three, and *Abyss'* and *Passion's* intros have especially excellent design, with Subject's Commodore 64-style tune in the *Passion* intro worthy of added praise.

Finally, *Tikken* by Syndrome fits the Playstation classic into just a fraction of a disc. Honest. Well, ok, it's just some digitised, blurring kung-fu footage, but what do you expect in 40k?

PROTRACKER SUPPORT ARCHIVE VOL.3

UTILITIES

ByHarvard Pedersen
 Available on the Internet via ftp from the Aminet archives:
 eg <ftp://src.doc.ic.ac.uk/mus/edit/ptsupp.lha>

Headcase by Axis: Donuts swirling ambiently.

Tekken
by Syndrome: You get your 40k's worth.

If you're at all interested in making music on the Amiga, and you have a copy of *Protracker* – the module composition tool which *Octamed* is based on – then this support

archive is absolutely excellent for both beginners and more experienced 'trackers'.

It features full AmigaGuide documentation to *Protracker*, with clear instructions on how to use the program, and basic suggestions for how to go about making a tune. This incorporates the original *Protracker* docs, but has been extensively enlarged and linked, making it a very useful resource.

In addition, there's a good module-ripping program, so that you can try to grab your favourite tune out of a game or demo and listen to it any time. Or play around with it yourself, if you feel like it. There are also some very useful assembler source codes for replay routines, which coders will no doubt have a field day with.

Finally, there's selected sound samples and songs to show you how it's all done. They're of a consistently high quality, too, so there really is something in this collection for everyone interested in MOD music.

This is especially true as *Protracker*, despite only using 4 channels, is still a viable alternative to *Octamed*. Please note that *Protracker* is also a freely distributable program, and is available from Aminet or your local PD company. I'd recommend version 2.3B, but many people prefer the MedRes, redesigned, 3.0+ versions.

STELLAR – GALERIE REMIX

DEMO
AGA

Available on the Internet via ftp from the Aminet archives: [eg ftp src.doc.ic.ac.uk, demo/aga/str-gale-mix.tha](ftp://src.doc.ic.ac.uk/demo/aga/str-gale-mix.tha)

Just recently, a new trend seems to have started within the fertile imagination of the 'demo scene'. Whether it be because demo coders can't get round to coding any new routines, or just because it's an interesting concept, demo crews have started releasing remixes of their demos. Essentially the same effects but with different design and style.

Thus, we get Stellar taking their demo *Galerie*, and remixing it for 1996. *Galerie Remix* won the first demo competition of 1996, at Juhla in Finland. One thing especially to be commended about this remix is that it's been tweaked to run on a normal A1200 with no fastmem, albeit a little sluggishly.

In any case, the demo itself is nothing short of excellent. Stellar like playing with light, whether it be a lightsource swinging ethereally across a *Galerie* logo, or bright lightspots swooping down alien tunnels. It's simply a wicked example of linear, effects-based demo-making. The routines are original and intelligent with it.

The music especially impresses this time round. It's that man Groo again, with a mysterious co-credit to

the PC musician Dune. Together they construct a breakbeat, cut-up guitar accompaniment to rival any recent demo-tune. Stellar indeed. ☺

Galerie Remix by Stellar:
Impressive images and a tune by Groo and Dune!

Galerie Remix by Stellar:
Remixed for '96 and now running on the A1200.

Creep by Artwork & Polka:
A distorted chocolate whirl and a light sourced metallic ring.

AMIGA FORMAT

INTERIOR DESIGNS

Graeme Sandiford

Finding high quality ready-made 3D objects is never easy so you can imagine my joy at finding over 250 of them on one CD. *Model Monger Interiors 1* is a collection of photo-realistic common objects you might find in the home or office. As they're royalty-free you can use them in your own productions.

If you are after help with creating your own objects in *Lightwave* then

you'll find our review of *MacroForm* of great interest.

Once you've created your masterpiece you might want to print it out which is when a colour printer comes in handy. It just happens we've got the Canon *BJC-610* on test. We've also got an *Amiga Format* first in a review of a video-based magazine and *Digita's Wordworth* and *Home Accounts* have some exciting new features.

REVIEWS

64 CANON BJC-610

High quality colour printers have been out of the reach of all but the most affluent of home-users for some time. However now Canon have brought out the *BJC-610* for under £500, more people will be able to enjoy the luxury of colour printing.

66 MACROFORM

Graeme Sandiford installs this *Lightwave* plug-in in the hope that he'll become a better modeller - find out if he's right.

68 WORDWORTH 5

David Taylor writes like he's never written before in an attempt to find out if *Wordworth 5* really is better than *Softwood's Final Writer*.

73 MODEL MONGER INTERIORS 1

If you're looking for some 3D models to use in an animation set indoors then join Graeme Sandiford as he tries out 250 household objects on CD-ROM.

74 LIGHT SPEED ISSUE 3

It's a video that's a magazine for users of a program, but is it any good? Graeme Sandiford finds out.

76 HOME ACCOUNTS VS COUNTING HOUSE

Graeme Sandiford puts two new accounting packages head-to-head.

79 FOUR SQUARE HIGH DENSITY DRIVE

Few Amiga-owners have HD floppy drives, but this good-looking new drive may change this. Graeme Sandiford puts it on his desk and has a good pose.

81 CD-ROM ROUND-UP

Graeme Sandiford and Robert Polding survey the best new Amiga CD-ROMs.

APRIL 1996

93

A high quality, low priced printer – suitable for the home or the office. Graeme Sandiford was suitably impressed by the latest Bubblejet from Canon.

The quality of the BJC-610's output can be seen even in this low-resolution print out.

Canon BJC-610

Canon's range of Bubblejet printers have long been one of the most popular lines of computer peripherals. Aside from providing unprecedented quality for their price, the BJ range owes much of its success to its incredible support across platforms.

Bubblejet printing is a unique process where ink is heated until it forms a bubble and then shot at the page while still hot. This results in relatively quiet, fast and high-resolution printing that is ideally suited to colour.

While not able to equal the quality of a laser printer, Bubblejets have always managed impressive resolutions and

the BJC-610 is capable of printing at 720x720 dpi (dots per inch) which is actually higher than some laser printers. The appearance of images is further enhanced by reduced bleeding of the ink because it dries so quickly.

FOUR COLOURS

The BJC-610 is 4-separation colour A4 printer which means that it uses four different colours instead of three. A three colour printer attempts to generate all of its colours by mixing differing amounts of cyan, magenta and yellow inks. This usually means that when they try to create black they produce a very dark maroon.

The fourth colour used by the BJC-610 is black which provides better outputs when printing dark colours and means that you don't have to waste other colour inks when printing text.

The BJC-610 is essentially aimed at the small office market where it will be needed to perform general printing functions and periodic colour printing. However there is no reason why it can't be used in the home too, especially as the prices of the various coated papers have fallen.

Physically, the BJC-610 is quite attractive and fairly unobtrusive. It has a more or less upright design which is becoming popular with a number of

printer manufacturers. This gives the printer a surprisingly small footprint and means that a place can be found for it on most desks – even one like mine with its, uhh... "unique" filing system. One of the aspects of the vertical design which is quite neat is the paper collection tray. This is located at the base of the printer and slides into the body when not in use. The printer also comes with a sheet feeder as standard which can hold approximately 100 sheets of A4 paper, 50 sheets of transparency film or 10 DL envelopes.

Although this print from *True Brilliance 2* is still slightly banded it's not bad at all and certainly better than the *Canon Studio* default.

QUALITY OF OUTPUT

Other hardware niceties include automated cleaning of the print head. After a while, especially after a period of inactivity, printer heads tend to get clogged with ink which reduces the image quality by producing thin gaps. By using the operator panel located on the front of the printer, you can clean the print head without having to open the printer and shove a cotton bud around inside.

The panel also provides you with information about the printer's status such as the dpi mode, the sheet feeder mode and warns you if the ink is running low.

Of course the most important feature of a printer is the quality of its output. One of the major contributing factors to the quality, aside from the method itself, is the resolution the printer is capable of. The *BJC-610*'s main rival is Hewlett Packard's *DeskJet 660C* and, in terms of resolution, the *BJC-610* has it licked.

The resolution of 720x720 dpi in both colour and black and white modes compares favourably with the *HP 660C*'s 600x300 in colour and 600x600 in black and white.

The *BJC-610* also has a small advantage in the speed department, with a maximum printing speed of 205 cps (characters per second) in HQ mode and 0.55 to 1 ppm (pages per minute) in graphics mode compared with 134 cps HQ and 1.67 ppm.

However while the *BJC-610* looks impressive on paper (excuse that

DRIVING AMBITION

You can have the best computer in the world and an excellent printer, but that doesn't mean your output will be as good as it should be. To make sure you get the best out of your printer you need to be sure that you have the best software driving it.

Unlike many other printer manufacturers Canon have always supported the Amiga and while the Amiga drivers aren't distributed with the printer you can obtain a copy of *Canon Studio 6.3* direct from Canon. However we weren't too impressed by the output provided compared with that obtained from *Amiga Shopper 61's Turboprint Coverdisk*. The output from *Canon Studio* was heavily banded and way too dark compared to the crisp and diffusion-dithered printout from *Turboprint*. However we did get some better images with some fiddling and the registered version (£20) has more options.

The top picture (printed by *Canon Studio*) is very dark and heavily banded compared with the one on the bottom (printed from *Amiga Shopper's Turboprint Coverdisk*).

pathetic pun), the true test of the quality of the output is how closely it matches what's on screen. While it must be said that this has a lot to do with the driver software – see *Driving Ambition* boxout – the *BJC-610* produces excellent quality images for its relatively meagre price.

If you are looking for a printer that's capable of producing images that are of acceptable quality for presentations or simply for your own gratification, then the *BJC-610* may be just the printer you're after. ☺

MEDIA MADNESS

Gone are the days when you could only use photo copier paper in a printer. Nowadays you can cram in pretty much anything that will fit. The Canon BJC can also accept a surprising number of different printing media, including: transparencies, BubbleJet paper, Hi-Res paper, high gloss film, glossy coated paper, back print film and fabric sheets.

MacroForm

Graeme Sandiford finds out what *MacroForm* has done for *Lightwave's* Modeler.

Main: Hmmm check out the smooth curves on this mouse.

Right: Those gnashers look nasty, but they were a snap to make.

One of the most common gripes about *Lightwave* is that Modeler, the part that creates objects, could be improved upon. Very often, after swapping from another 3D program, users found it hard to get Modeler to do what they wanted it to.

MacroForm is a collection of over 20 add-on tools for Modeler, developed by One and Only Media to meet the needs of a tricky project they were working on. As well as adding a host of new power modelling features to *Lightwave's* Modeler the creators of *MacroForm* intended to make creating objects easier for beginners.

MacroForm is split into two groups: the Productivity Set and the RailToolz Environment. However the crux of the system is a useful macro called KeyMaster. It enables you to gain quick and easy access to the other tools through the function keys and set up an environment that suits you.

Align and Center is a Productivity Set tool that helps you align objects. It needs two layers and at least two objects and then it can be used to align objects to each other on an independent axis.

Distance and Angles is a tool that more than replaces *Lightwave's* measuring functions. Not only does it tell you the distance between two points it also provides you with their angles in all three view windows.

Dimensions is a tool that is great for resizing objects as it works on absolute values – so you just type in a new size for an object in feet, inches or whatever. NewBox simply creates cubes with rounded edges. Slice and Dice gives you a great deal of control over creating segments from existing objects by, you guessed it, slicing and dicing them.

The RailToolz macros are the really powerful elements of *MacroForm*. They can be used to create and modify organic objects by making use of Modeler's rails. Perhaps my favourite of these is RailMold which can be used to create beautifully smooth curved surfaces. When used with meshes it can produce excellent organic and aerodynamic shapes.

RailRout is another powerful tool that creates routed object like slides or channels. There are other tools which enable you to perform a number of tasks including bending objects along a curve and stretching and squashing objects

As you can imagine armed with such an array of powerful tools 3D artists will be able to build pretty much any object imaginable. Unfortunately, despite its host of powerful tools, there is one problem with *MacroForm* at the moment.

Along with several other macro using systems, it won't work with the 1260 board. This is because the Rexx Plus Compiler is not compatible. But, despite this problem, *MacroForm* still transforms Modeler into the program it should have been.

MACROFORM

DISTRIBUTOR

Activa UK & Anti-Gravity Products
0181 402 5770

PRICE

\$215 (approximately £138)

SYSTEM REQUIREMENTS

WB2.04 or better, 8Mb of RAM, hard disk and *Lightwave* 3.5. 68030 CPU and FPU recommended.

SPEED

Bearing in mind the processor-intensive nature of *Lightwave* and the complexity of the objects, it's pretty good.

MANUAL

Takes a while to get into but is quite thorough and informative.

ACCESSIBILITY

If you can use *Lightwave* you should

find it easy – if you can't, it still shouldn't be too hard.

FEATURES

A tremendous range of useful macros that literally transforms *Lightwave's* Modeler.

VALUE

For the privilege of getting even more out of *Lightwave* this is definitely a good deal.

"Modelling in *Lightwave* will never be the same again"

90%

"If you print without it, you have only yourself to blame!"*

*Review in German "Amiga Plus" Magazine Dec 95

TURBOPRINT

Professional 4.1

The probably best **24-bit printer driver system** has now got even better!

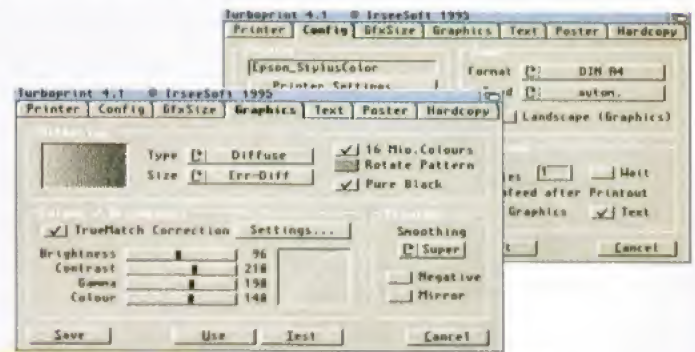

Outstanding: TurboPrint will not only output 24 bit-graphics directly from your floppy or hard drive in the highest quality possible, but will also print **from applications** like Personal Paint, Deluxe Paint or Brilliance the **full colour palette** available with AGA-graphics chipset. Although utilising the standard Workbench printer interface, printout will **not** be limited to the usual 4096 colours.

Perfect printouts from day one:

TurboPrint combines ease of use with **unparalleled output quality**. Simply choose your printer, and go: With our brand new **intelligent printer drivers** you'll get fantastic results straight away.

Matching colours: With the new high-speed "True Match" colour management system up to **16 million colours** are closely represented by the printout.

Various settings, like brightness, contrast, colours, and many more, allow for **individual configuration**.

The Preferences Menu with 7 "Index-Cards"

Easy to use:

- ✓ Intuitive and clearly arranged preferences menu. Style guide compliant. May be **hotkey-activated** at any time.
- ✓ **Hard copy function** for fast printing of screens.
- ✓ **Poster function** for oversized printouts.
- ✓ **Compatible** to your existing Amiga software: No difference in printing, except new levels of quality.
- ✓ Will run on every Amiga model with Workbench 2.0 or higher.
- ✓ Supports even the latest **printer models**, such as Canon 610, Epson Stylus Pro/Color II/IIIs, HP 660/850.

Press Reviews about TP Pro 4.1 - "Best Choice"

"The test prints on the DeskJet 850C were better than those produced by Studio ... I was impressed with how easy it was to get to grips with and the quality of the prints using the default settings."

Amiga Shopper 3/96

"TP4 is the new leader in every respect. It is simply the best choice"

Amiga Special 9/95

"The already impressive print results have been further improved, with the new True Match system playing an important role. Handling could not be much easier."

Amiga Magazin 9/95

RECOMMENDED RETAIL PRICE £49.99

The Print Manager showing the Layout function

Improved Graphics Print Manager:

Our integrated 24-bit print and display utility has been considerably improved. New functions include support for **IFF, JPEG, PCX, GIF, BMP** and many more.

Any picture up to 16 million colours may be displayed either in true colour (with **CybergraphX** on third party graphics cards) or dithered with up to 256 (AGA) or 16 colours.

The new **Layout function** allows for precise mouse-controlled selection of printout size and position.

No need for test printouts: The Graphics Print Manager will allow the user to control the results of all changes made to the print parameters (Brightness, Gamma Correction, etc.) directly **on-screen** before printing.

Make your printing dreams come true!

Wordworth 5

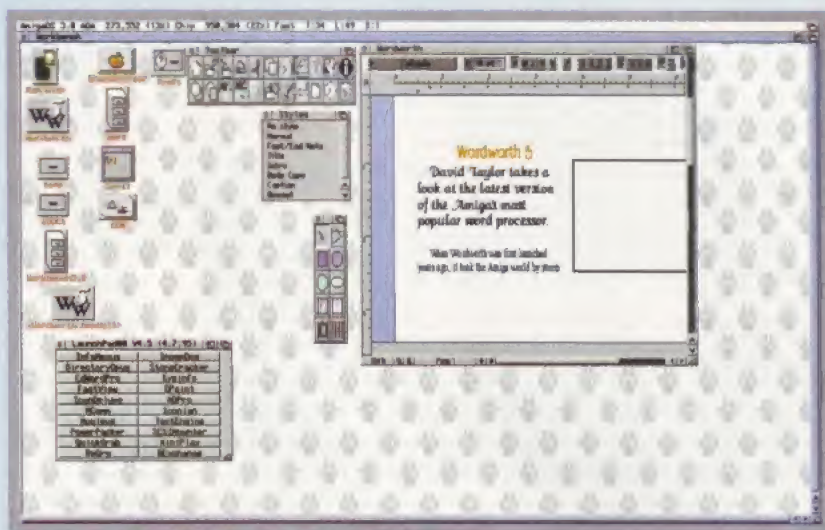

David Taylor takes a look at the latest version of the Amiga's most popular word processor. How much more does the new version offer?

When Wordworth appeared years ago, it was an impressive program that allowed you to produce some very nice looking documents. But this new version makes the original look very limited indeed.

Wordworth 5 is a package that can be used by professionals and home users alike. It can be used to create stunning documents, whether they are school projects or posters for the church fête. This is much more than just a program to write letters. This latest version of Wordworth is a document design and creation package as much as it is a word processor. Newsletters, presentations, reports, projects – these are the things Wordworth 5 excels at.

So what are the improvements on version 4? Ah, well, there never really was a Wordworth 4. A version different to 3 has been bundled with the new Amiga's and there might have been some confusion as to whether Wordworth 5 was the same as that in the bundle. To avoid it, the bundled version was called 4SE and this version 5.

The enhancement that users will find most immediately useful is the new

Placed on an extended Workbench, Wordworth can have its toolbars placed outside the main window, leaving an uncluttered workspace.

Drag and Drop Style Sheet option. Style Sheets allow you to set up the default styles you want so that you don't have to adjust everything all the time.

These are not just a case of preferences for fonts. Within style sheets you can set up the font size, colour, background colour, style, spacing, paragraph tabs, justification, etc. In other words, the entire settings for a paragraph are stored within each style sheet. You can then just pick the style you want for each bit of text and drop the style onto it, transforming it from boring looking text into the new look of your requirements.

COMPILING TEXT

This is especially useful for people who are compiling text from several different sources. If, for instance, you were compiling a work newsletter which had several contributors, who work on different machines or even different platforms, you can get them to give you a PC disk (which both Macs and PCs can use) containing their text as ASCII. Import the ASCII into Wordworth and then drop the style sheet on. It will automatically be transformed into the setting you use for your newsletter. This is obviously much quicker than importing the text, selecting it and then manually adding the fonts and tabs.

Style sheets can be based on previous sheets, so that if you always use one font, but in different sizes or colours, you can quickly build up a library of sheets. When you have your sheets set, you can save them within a document template.

Templates are documents which contain certain bits of information that you want to use again and again. You

can save default parts of text within a template as well as the settings for style sheets. So, if you want you can have letterheads or newsletter logos, etc all set up.

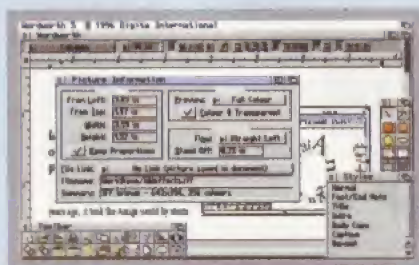

TEMPLATES

The fact that templates save text as well as settings is something of a mixed blessing, because there is no way of saving style sheets separately – they must be included in a template. So, if you're half way through a document and you create a new style, it's very fiddly to include it in your default set up.

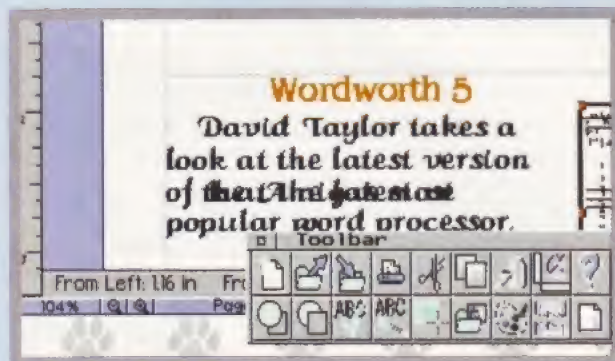

To make sure that sheets are included when you start up, you save them within the "normal" template file that Wordworth loads when starting up. However, if you're halfway through a text when you create a new style, how can you save the sheet as default, without saving all the text as default too? You have to work around the problem. Save the document and then open a new one. Import the style sheet from the saved document – you can do this, but the document has to be saved first, it can't be read from memory – and then save the empty document as the new default. Hopefully this fault will be rectified soon.

WORDWORTH PD

The next big thing is the inclusion of ARExx support which is going to make people very happy. The best thing about ARExx is that even if you don't use it yourself, other people will create their own ARExx macros and circulate them so that everyone can use them. I'm confident of this because it's already happened. The first volume of

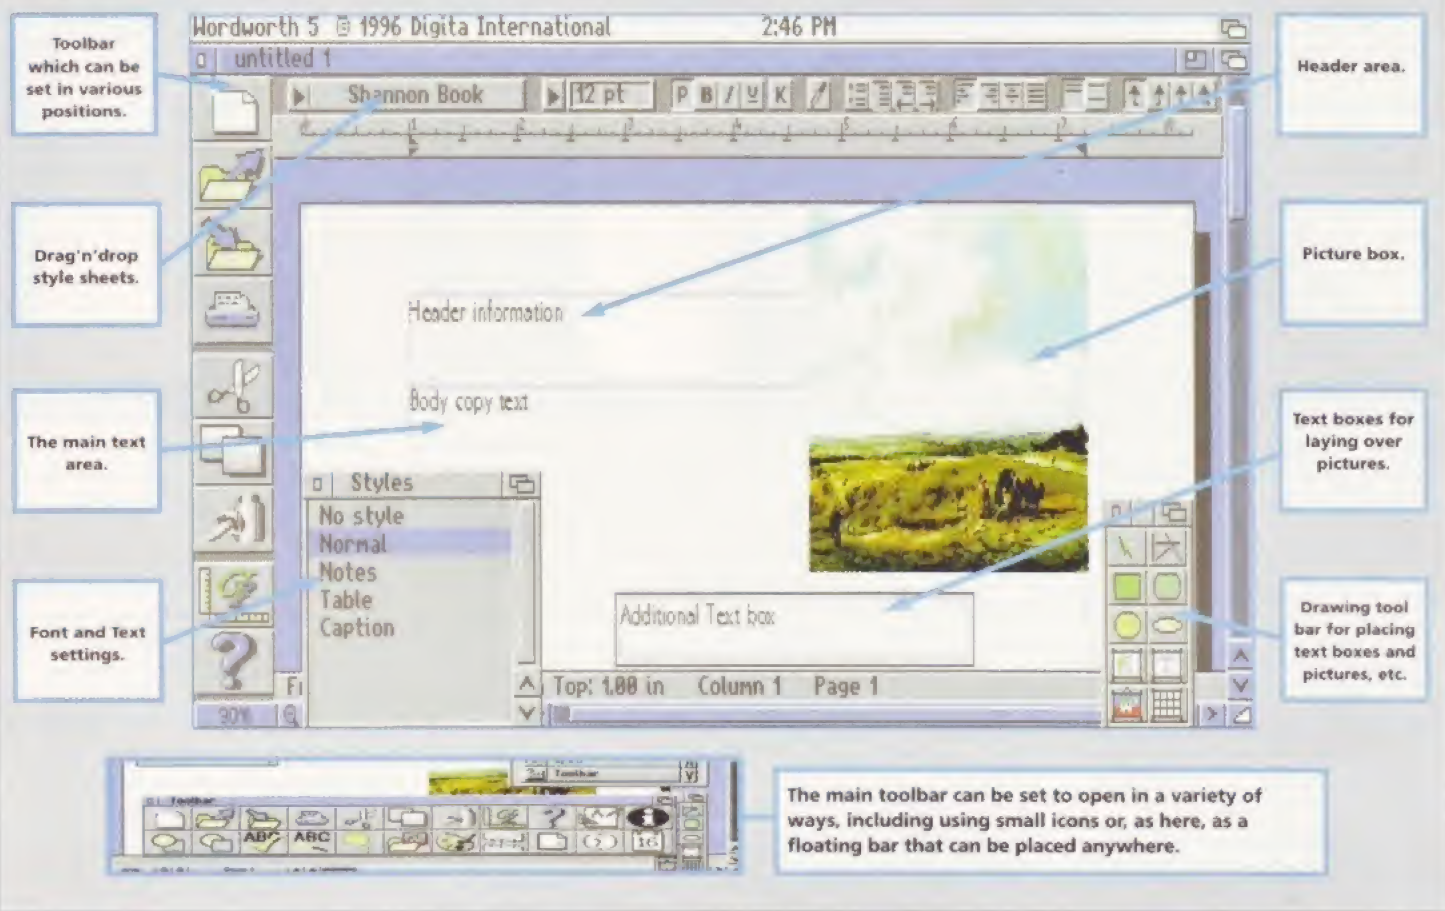

Left: Placing and sizing pictures is easy, but we still want more.

It appears to be impossible to write a WP on any platform that doesn't suffer the occasional screen "quirk".

WORDWORTH'S INTERFACE

Wordworth PD, including templates and ARexx, has been released and can be found on the Coverdisk of this month's *Amiga Shopper*.

Leading on from the addition of ARexx is the set of ARexx wizards. These are interactive tutorials which you can launch, leading you through certain processes so that you can see how to do things. These wizards are very useful and can direct you in many different aspects from creating an invoice or using the mail merge facility to creating your own World Wide Web page.

FILE FORMAT SUPPORT

Digita have also developed an idea called FontEffects™. These are a set of adjustments that can be applied to any font. They include the ability to scratch a font, set an oblique (which means slanting the font either way) and use small capitals as normal letters, i.e. WRITE LIKE THIS.

They are not major extras, but they're handy little things that you'll find useful from time to time.

Wordworth has also been improved in its file format support. You can now load 24-bit images and import tables from *TurboCalc* and documents from *Final Writer* or *Final Copy II*.

Of course, these new additions are supplemental to the already impressive array of features of *Wordworth 3*. You can set up documents designed as double page spreads, adjust the number of

columns, import pictures and run text around them. You can set the program to auto-correct common typos like "teh" instead of "the". There's a Librarian facility to allow you to simply grab common text and insert it instead of re-typing it all the time, e.g. "Yours sincerely".

You can have multiple text boxes so that you can lay text over the top of pictures as captions, for example. You can even ask Wordworth to read a document back to you, albeit in a bit of a robotic voice.

Then there's the Text Effects, which are not to be confused with the FontEffects™. These are a set of preset and variable effects that allow you to do fancy things with text, such as spiral it, set it in a circle, etc. It's useful for rotating text and quickly creating logos or monograms.

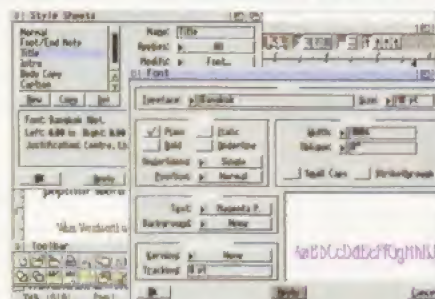

And, when you're feeling overwhelmed by all the features, you can still relax with Playtime, which gives you a little sliding puzzle to solve.

Wordworth uses Agfa™ Intellifont™ to scale fonts without loss of quality. It's rather nifty as this version comes with 50 Compugraphic fonts

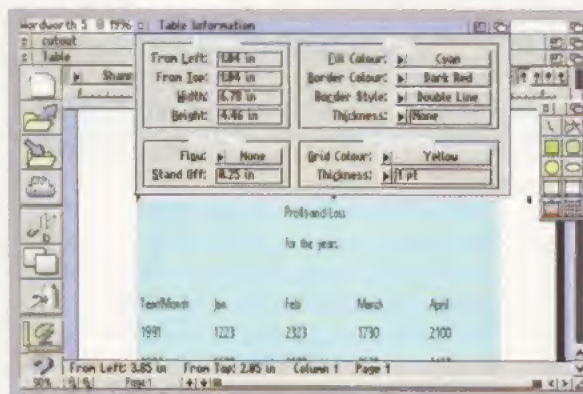

absolutely free.

Despite all the added features in this new version, there are areas that could still be improved and hopefully they will be. The problem with Style Sheet preferences having to be set within templates is not the only pref

Continued overleaf →

Creating style sheets is very easy and they are easily the most useful addition to the program.

You can import tables directly from *TurboCalc*, the spreadsheet program from Digita. They are then treated much like pictures.

← problem. Although you can set the toolbar to be opened automatically when you want it, you cannot set it to open the Style window or Drawing tools window automatically. You have to open them each time you load up, which is just a bind. Also, if you set *Wordworth* to open on Workbench as opposed to on its own screen, it will always open up to the full size of Workbench.

IMPROVEMENTS

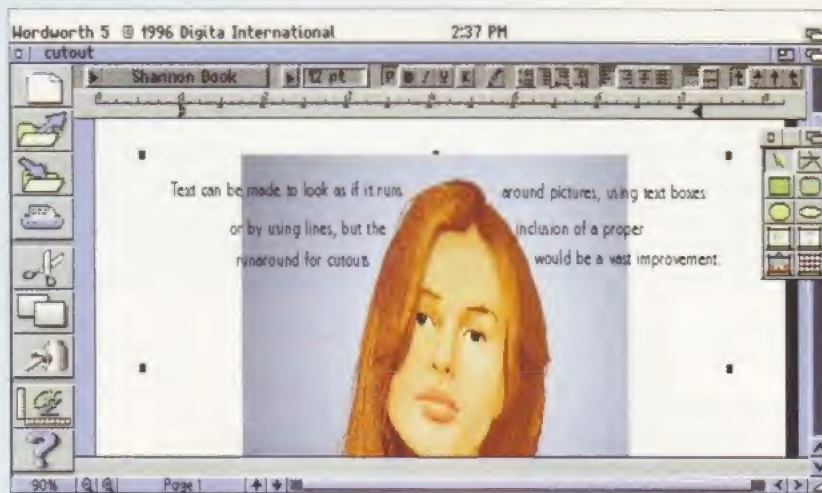

This somewhat defeats the object as far as I'm concerned. I wanted to be able to open *Wordworth* as a normal one screen sized window, on a larger, auto-scrolling Workbench. This would mean that I could have the ToolBars, Drawing Tools and Style Sheet windows all hanging outside of the *Wordworth* window and not inside obscuring the view of the page.

It is possible, but it does mean re-sizing the window whenever you open a document. These should be settings that could be included within the program's preferences. It doesn't take long to open a toolbar from a menu and re-size a window, but it is tedious.

I would also like to have seen the inclusion of standard picture setups within either the style sheets or the Librarian. This would mean that you could simply drop a pre-sized picture with a frame and caption over the top, all grouped together, onto the page and then fill in the blanks. It would have saved repetitive work, which is what computers are best used for.

Although being able to import different image formats is excellent, the feature support for them within the program is varied. You can re-size pictures and the program will scale them appropriately, including EPS

You can give the effect of text wrap by fiddling around with new text boxes - but what a drag!

pictures which are scalable without loss of quality, which is obviously very good. But, you can only import rectangular images. It is possible to use colour 0 as transparent and allow text to runaround very close to the picture, but it still seems to contour in straight lines, rather than curving around the image.

One way of getting around this is to make sure there is no runaround on the picture itself and then place invisible boxes behind it in a variety of shapes with appropriate runaround set on these.

Again, this is a cumbersome solution, which runs into problems if you want to place the picture in the middle because you only get the choice of running text either left or right around the box, not both ways. It also means constructing irregular shapes from boxes and ellipses, because irregular shaped drawing tools are not available.

Even the inclusion of the ability to draw an outline manually would have been helpful. As it is, the closest you can get is using straight lines of various lengths to surround a piece of clipart. But this still means messing around with additional text boxes over the top of the picture in order to give the

impression it's running around. This will, unfortunately, give Quark Xpress users something they can quietly scoff about.

Some of these niggles will be easier to change than others, but they are the fly in an otherwise excellent ointment, which may serve to soothe some of the Amiga's problems. After all, this is a very important release for the Amiga.

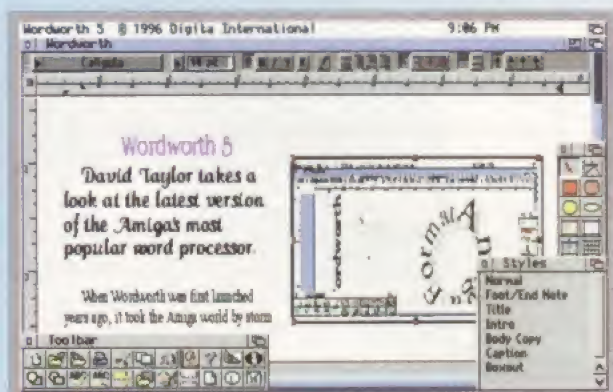

The machine is constantly criticised for its lack of professional level word packages, something which *Wordworth* certainly is. All we need now is for the Amiga's printing speed to be rectified although, thankfully, this version of *Wordworth* does allow background printing so that you can carry on work whilst it chugs along.

Wordworth 5 is an extremely powerful program with all the features that most people will need. With a few tweaks, it could be a pinnacle of achievement. It is also available at a very reasonable price which is a great credit to Digita.

For those users who don't need a powerhouse of a program maybe *Wordworth 5* isn't enough of a change but the more ambitious users among you should, at least be tempted by this program's latest features

Below: Import a picture and drop styles on. Quickly.

Far Below: There are plenty of flash text effects supplied.

WORDWORTH 5

Upgrade your old *Paint Program* to *Photogenics* and save £15!

For a **limited** period you can upgrade *any* old Amiga paint, graphics or image processing package to Photogenics 1.2A, the latest word in 24-bit paint and image manipulation software for the Amiga. Take full advantage of the power and flexibility that the Amiga offers, don't be limited by the inconvenient and archaic interfaces that your old products use.

Just send us your payment and any proof of purchase for a rival product (Photocopy of manual or disk, receipt, or just quote us a line from the manual by fax or phone) and we'll send you back the latest version of Photogenics 1.2A by return. Plus you can continue to use your old software while you wait for Photogenics (normally dispatched within two days). See for yourself why all the Amiga magazines gave their top awards to Photogenics. Upgrade now to the future of Amiga graphics software.

BUT HURRY! THIS SPECIAL OFFER MUST END BY APRIL 30TH 1996. ORDER SOON TO ENSURE PROMPT DELIVERY.

UPGRADE COST £44.95 (NORMAL COST £59.95). PLUS POSTAGE AND PACKING (£2.25 UK, £5.00 REST OF THE WORLD).
TOTAL COST: £47.20 UK, £49.95 REST OF THE WORLD.

This offer is **ONLY** available for direct orders from Almathera. Please do not embarrass your local dealer by asking him to honour this deal. Only the English Language version of Photogenics 1.2A is available through this competitive upgrade program.

Photogenics 1.2A requires a minimum of 2Mb of RAM (4Mb minimum if used with hard disk), a 68020 or higher CPU and Kickstart 3.0 or higher. CyberGraphX required for 24-bit operation on third-party graphics cards (eg. Picasso II, CyberVision64)

You can upgrade from any version of the following: Deluxe Paint (any version from 1 to 5), Personal Paint (any version), DigiPaint, TVPaint, Image FX, Art Department, ADPro, ImageMaster, PixMate, Brilliance. (Phone for information on upgrading from any other Amiga graphics package.) Cover disk versions of software ARE acceptable for upgrades. Any disks or manuals sent in for upgrade purposes WILL be returned with your order. Please do not send in any large or bulky manuals or we will have to charge extra for return postage.

Model Monger

From Cappuccino machines to dumbbells – Graeme Sandiford checks out a new range of 3D household objects.

Perhaps the most rewarding part of 3D graphics is creating a highly detailed and beautiful model. For most 3D artists the ultimate compliment is to be told that their work has been mistaken for its real-life counterpart – such as the incredible animals in *Jumanji*.

However, creating objects that appear real is an extremely time-consuming process and few animators can spare the time needed to always build their own models. This is why model collections, such as *Model Monger – Interiors 1* reviewed here, are becoming more and more popular.

Model Monger – Interiors 1 is intended to be a collection of 250+ photo-realistic models that are typically found inside a house or office. As the objects are described as photo-realistic you'd expect them to be highly detailed and of sufficient quality to be used professionally. The objects are all of an interior nature so some of their prime uses will include CAD visualisation and animations set indoors.

The CD is not Amiga-specific and therefore its contents are stored in a variety of formats. The ones of interest for most Amiga-owners will be the *Lightwave* ones, although *Imagine 3* users will be able to import the DXF objects as well.

The disc also contains the same objects for use in *3DStudio*. All of them, except the DXF meshes, are not archived and are therefore ready for use from within your 3D program without having to go through a lengthy de-archiving process.

Left: It's a shame the office budget won't stretch to a cappuccino machine. We'll just have to stick to whipping up muddy water.

Finding your way around the disc could have been made easier – there is a viewer program, but it's for use with PCs only. However there is no reason that you couldn't use the PD program *ShowObj* to view the objects.

There is a "road-map" document that contains a brief description of the objects in each directory.

You'll find a relatively wide variety of objects on the disc everything ranging from cappuccino machines to TVs and even a set of dumbbells. While the disc's contents cover a great deal of objects there

Below: Ah a microwave just what you need for that blowing gremlins animation.

Right: Work those gluteus, hamstrings, calves etc.

is one notable absence – there are no texture maps. This would have been a

welcome addition, enhancing the appearance of the objects when rendered and thereby making them appear more realistic. The only other gripe I have with the collection is that some of the objects are un-necessarily large – containing more points than are really needed.

If you are going to be involved in any projects that will involve using indoor scenes then you will find this CD a very valuable tool. However you might also consider the *Pro Objects Household Items* collection, reviewed in *AF 81*, as an alternative.

Above: Doesn't look too comfy does it? Some missing polygons needed to make it double-sided.

Below: A beautifully smooth glass.

MODEL MONGER

DISTRIBUTOR

Activa UK & Anti-gravity Products

PRICE

\$45 (approximately £30)

SYSTEM REQUIREMENTS

Lightwave and a CD-ROM drive.

SPEED

Rendering times are significantly lengthened due to unnecessary points in certain objects.

QUALITY

The majority of the objects are of a very high standard indeed – more than good enough for professional use. However some of them have slight polygon flaws that need to be compensated for by making them double-sided.

FEATURES

The objects would be greatly enhanced by the addition of a few good texture maps.

VALUE

For the measly sum of \$45 dollars you get over 250 high quality household objects – this is good value in my books.

"They really are photo realistic and they're cheap as well"

LIGHT SPEED

It's got to be an *AF* first – not only are we reviewing another mag, it's in the form of a video cassette.

This is a frame from the best of this issue's Reader Showcase animations.

This chap is going to show how to create spaceships from letters of the alphabet.

Most of the contributors work from home – this fellow is reviewing WCS 1.

Issue 3 of *Light Speed* includes a show report from the SigGraph '95 show.

Don't panic, It's Only 3D! is a regular tutorial on basic modelling techniques.

LIGHT SPEED

■ BLITTERSOFT ■ 01908 261466 ■ £16.99 ■ Issue 3 October 1995

Light Speed is a monthly magazine for *Lightwave*-users. Previously only available in the US this video magazine has been converted to PAL and is now available in the UK from Blittersoft.

Despite initially sounding like a strange format for a magazine, a video tape is an excellent medium for a magazine dedicated to users of a 3D program. When writing for a printed magazine it can often be difficult to explain certain procedures and techniques.

REGULAR FEATURES

The video contents are displayed for you at the beginning of the tape on the contents screen, complete with the time indexes for each section. There appear to be two regular features. It's *Only 3D!* and the User Showcase. The former is a 3D-modelling tutorial that takes you through basic techniques and concepts. It is presented by Dave Warner in an amusing, if somewhat corny, manner. The User Showcase shows off some of the better contributions from readers – or should I say watchers?

Two of the tutorials in issue 3 are based on camera movement. The first uses 4 null points parented to each other and the camera. According to the instructor there is good reason for this, but we are left to figure it out for ourselves. The second is in a similar

vane, but with just two null points. A third tutorial shows how to model a spaceship and even includes how to add hull lights.

And it's not only tutorials. There are also reviews of products on the market. This month saw the review of *World Construction Set 1* and there was also a brief report from the '95 SigGraph computer graphics show.

Initially *Light Speed* was quite painful to watch because the reviewers and tutors were a bit too corny. However, on reflection, the content was actually quite good and after all, these guys are not professional presenters. At the moment *Light Speed* has a few rough edges, but it holds a great deal of promise for the future and has plenty to offer newcomers to *Lightwave*. ☺

This is part of an animation shown in the Reader Showcase.

Here's another example of the high quality animations on tape.

ProGRAB... Rapid Frame Grabbing on your Amiga

Now compatible with both VHS and S-VHS!

The revolutionary S-VHS ProGrab™ 24RT Plus with Teletext is not only the best way to get crisp colour video images into your Amiga, from either live broadcasts or taped recordings, it also costs less than any of its rivals. This real time PAL/SECAM/NTSC* 24-Bit colour frame grabber/digitiser has slashed the price of image grabbing on the Amiga and, at the same time, has received rave reviews for its ease of use and excellent quality results. ProGrab™ has earned honours from just about every Amiga magazine and Video magazines too! And... with ProGrab™ you needn't be an expert in Amiga Video Technology, a simple 3 stage operation ensures the right results - Real Time, after time.

STAGE 1...

Select any video source with S-VHS or composite output. This could be your camcorder, TV with SCART output, satellite receiver, domestic VCR/player or standard TV signal passing through your VCR/player... the choice is yours.

Grab images with your camcorder including S-VHS.

or, Take a signal from a TV with SCART output...

or, Use the signal from your satellite receiver...

or, Grab TV or video pictures from your VCR's video output including S-VHS.

STAGE 2...

With ProGrab's software, select an image you wish to capture using the on screen preview window and Grab (because the hardware grabs frames in real time, there's no need for a freeze frame facility on the source device). Once grabbed, simply download and view the full image on your Amiga screen. ProGrab also includes a Teletext viewing and capturing facility from either TV or satellite sources.

STAGE 3...

Use the 'grabbed' image with your favourite word processor, DTP or graphics package.

ProGrab really does make it that simple!

ProGrab™...
Supports all recent Amigas and is also fully AGA Chipset compatible. You can render images in any Workbench screen mode resolution including HAM8 mode (Amiga RAM permitting).

ProGrab™...
Saves and Loads images in IFF/ILBM, IFF/ILBM24, JPEG, BMP, PCX, and TARGA file formats. ProGrab saves animations as Anim5 files and animations with sound (requires PCMCIA interface and separate sound sampler) as Anim5 + 8SVX files. A range of image processing effects, palette computing routines (AGA only) and dithering methods are also new to ProGrab Version 2.5.x Photogenics fully supports ProGrab with a custom 'Loader' to enable grabs directly from within the program - saving YOU time!

ProGrab™...
Software has built in mono and colour animation facilities. The number of frames is dependant upon your Amiga's RAM.

ProGrab™...
Release 2.5.x software now includes...
• **SUPPORT FOR VIRTUAL MEMORY**
Allows the highest resolutions - Even with low memory Amigas. All Hard Drive systems, without the need for an MMU, requiring just 1MB Hard Drive Space.
• **ADDITIONAL TELETEXT FACILITIES**
With either Terrestrial or Satellite TV signals.
• **LARGER PREVIEW WINDOW**
Double Resolution and 4 times the area available with previous ProGrab software.
• **INTERNATIONAL SUPPORT**
Now works with composite PAL, SECAM and NTSC Straight from the box!

*Standard ProGrab hardware is PAL/SECAM/NTSC compatible. Teletext mode options are available with PAL & SECAM only. NTSC Only models are available to special order which then support the teletext mode fully. Please ask us for full details.

For just **£129.95...**

- ProGrab is supplied with everything you'll need +
- ProGrab™ 24RT Plus Digitiser
 - Latest ProGrab Version 2.5.x Software
 - Mains Power Supply Unit
 - Parallel Port Connecting Cable
 - User Manual
 - Input sockets for Composite and SVHS.

PCMCIA Interface for A1200 and A600 - Only **£34.95**

- ProGrab's optional PCMCIA interface includes the latest version software and extends performance for serious/professional users - offering the following benefits:
- Faster Downloading Times (up to FIVE times quicker)
 - Improved animation speeds of up to 11fps (mono) and 3.5fps (colour)
 - Sound sampling and animation capabilities (separate sound sampler required)
 - Saving of animations direct to your Amiga's hard drive
 - Freeing of your Amiga Parallel Port for use by a printer or other parallel peripheral device

ProGrab™ supports any Amiga with Kickstart 2.04 or later & a minimum of 1.5Mb. free RAM.

+ A video source cable will be required to match your own equipment set up - Ask for details.

ProGRAB S-VHS 24RT Plus

Consider this comment: "If you're looking for a high resolution 24-bit digitiser then, at the price, ProGrab 24RT represents great value for money."

camcorder USER

Counting House

This is the Inventory room - it's where you enter the details of the items that you buy and sell during a period.

Because of the program's unfortunate lack of a printed manual, one of the best ways to get to grips with *Counting House* is to go on the quick tour.

The Agenda room stores folders that link members of staff to events. It's handy for reminding people of tasks they need to perform, like sending off tax forms or firing someone.

Surprisingly, this is not where you borrow books and speak in hushed tones. It is actually where you keep track of media such as paper, magazines and floppy disks.

No sorry, this is not the room with a big table where all the managers go and talk about what they did on the weekend. The Management room is used to gain access to the program's reporting functions.

The Traders room is where all the transactions take place. Thankfully there are no blokes waving their arms around, shouting, "buy, sell" and jumping out of windows.

Money is perhaps the single most common thought that occupies peoples minds. Whether its finding ways of making, spending or simply keeping hold of it, managing the money we have can take up a great deal of our time.

Making effective use of our finances can be even more of a headache especially if you are running your own business. This is supposed to be where computers come to the aid of the common man by making dealing with such monotonous tasks easier and more accurate.

Unfortunately this is seldom the case. The traditional method of scribbling down figures on several scraps of paper and making a "best guess" evaluation of your current financial status, is often less of a pain in than more modern methods. This is why the interface of an accounting/ personal finance program needs to be given a great deal of consideration as things can be confusing and awkward enough without having to wrestle with an uncooperative interface.

Each group of related functions are kept in a room and can be accessed by moving from room to room. The rooms include an Inventory room for keeping track of items that you buy and sell, a Library for keeping track of different mediums such as magazines, tapes or disks, a Management room that provides access to reporting functions for final accounts and a Traders room where all the transactions take place.

This may all sound a little confusing at first and to be quite honest it is. I can appreciate the intention of designing an interface that closely resembles the way in which a real office works, but if you are a self employed person working by yourself this may only serve to confuse you. Even if the program's working methods are only superficially different it may be enough to put off someone who only has a basic grounding in accounting procedures.

In an attempt to make up for the program's fiendishly confusing working methods there is a quick tour room that will take you on a guided hyperlink tour of *Counting House's* features. Users can also avail themselves of the program's on-line help and tutorials. However, these don't make up for the lack of a manual which has been substituted with a 133-page security check system.

Incomprehensibly instead of using a manual as a security check, like most

NOVEL INTERFACES
Both of the products on review here have taken a novel approach to their interfaces. *Money Matters 4* shares the style and many of the interface concepts of its stable-mates *Wordworth*, *Organiser* and *DataStore*. *Money Matters* has a definite Workbench feel complete with icons and windows.

Counting House however has a completely unique approach to accounts package interface design. The program's creators have chosen to base their interface on a house - that is a house in as much as it consists of several connected "rooms".

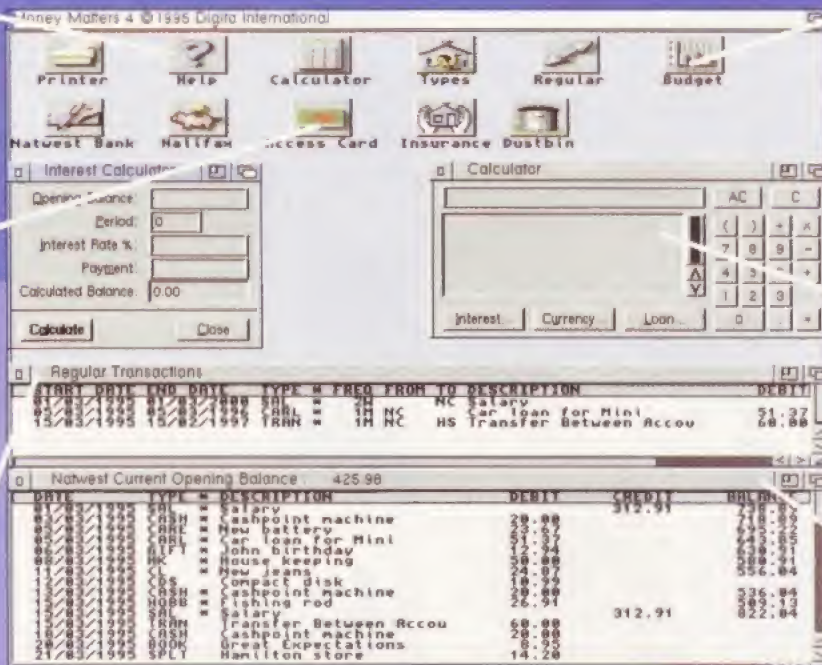

As you might expect, because of the different interfaces, the programs work in quite different ways. As mentioned before, *Counting House's* interface is quite... unique.

Money Matters 4

If you become confused about any of the program's functions you can find quick answers to your problems with Money Matters' on-line help.

You can set up as many accounts as you are likely to need. You can also create accounts for things such as credit and store cards or to keep tabs on a hire-purchase.

Regular Transactions are, as you might expect, transactions that occur at regular intervals. Once set up, this transaction will be automatically calculated every month, week or day.

Planning your finances ahead makes sense and the budget will give you a hand in doing this. It is also possible to produce graphs to give a representation of your finances over a period of time.

This is the Calculator. As with most calculators it can perform basic arithmetic functions, but it can also work out loan details and interest rates - most useful.

Here's a typical account. As you can see it looks very much like a bank statement, which is familiar to most people and makes things easier to understand.

other programs, *Counting House* has a list of flowers and other plants.

Money Matters 4 has a far more sensible and easier to follow system. It comprises of multiple accounts that appear as icons on a desktop. Any number of accounts can be created and given a name that the user can readily identify.

The accounts you create operate on a simple Debit and Credit method that will be familiar to anyone who has a bank account. All of the accounts can be linked via their transactions. As well as normal accounts there are special ones such as Regular accounts which can be used to specify transactions that occur on a regular basis and Types which enable you to specify a range of different types of transactions.

More importantly *Money Matters* actually has a manual. Admittedly it's not a fantastic one, but it is a manual that will help to get you started in using the program and provide a useful printed reference. This, combined with a simpler interface makes *Money Matters* by far the easiest program to get to grips with.

However in terms of Features and power *Counting House* has a definite advantage. Once you get past the troublesome interface you'll find that *Counting House* is actually based on sound accounting procedures and is

more geared up for use in a business environment. For example the program is already set up to produce a Trial Balance, Trading and Profit & Loss Report and Invoices. It also includes extensive Credit tools in the Cash & Credit version. What's more you can build new features yourself with *SBase 4 Pro* - which I suspect is the prime tool used in *Counting House's* creation.

DIFFERENT MARKETS

While *Money Matters* lacks many of *Counting House's* business-specific features it is not short of it's own useful tools. In particular, the new ones for version 4 include a Loan Calculator, a Currency Calculator, Insurance Inventory and Digisense.

And in order to help you make your financial planning easier you are provided with a budget tool and several reporting functions including a variety of charts.

While *Money Matters* is not intended to provide a solution to the money management problems of small businesses, to a certain extent it could still be used in this role.

And in conclusion, while it is obvious that both of these products are aimed at two very different markets, the distinctions between their features are not so clear cut. You would probably have to be a little bonkers to consider

using *Counting House* as a personal finance manager, but *Money Matters* could conceivably double up as a small business accounting program.

Despite the hideous and confusing interface of *Counting House*, both products perform their given task quite well. However while *Money Matters 4* would be my first choice in personal finance managers, if you were running a small business, I think that it's worth paying the extra money for the ease of use of *Easy Ledgers 2* (reviewed in *AF 66*), instead of grappling with *Counting House's* complicated interface. ☺

MONEY MATTERS 4

PRICE

£49.99

SYSTEM

REQUIREMENTS
WB2.04 or higher, 1Mb of RAM.

SPEED

General operation is pretty nippy but graph drawer is a little slow.

MANUAL

The manual takes a bit of getting into, but the on-line help is good.

ACCESSIBILITY

The intuitive interface is a joy to use and if you can make sense of a bank statement you'll be OK.

FEATURES

There are more than enough features for the home and most small businesses. ●●●●

VALUE

Fifty quid will probably stretch most home users' pockets, but then again it should save you money in the end. ●●●

"Your Bank Manager will love you for buying this program"

drive Four Square HD

It's small, it's simple and it's sexy. What more could **Graeme Sandiford** want from an HD drive...

Despite the recent introduction of new portable data storage technology, such as the *Omega Zip* drive, floppy disks have not kicked the bucket just yet. Even though being able to store 100Mb on a single cartridge is beneficial to most serious users and a real God-send for anyone involved in professional graphics or multimedia projects, the humble floppy is still going to be the choice of most users for the meantime, anyway.

However, surprisingly few Amiga-owners have made full use of this medium by purchasing a High-Density drive. The *DX9* (a.k.a. the *Four*

Square drive), produced by the European PC-manufacturer DELL, is a new external HD drive that gives Amiga-owners another reason to upgrade – it's a seriously attractive piece of kit. The most notable characteristic of this drive is its diminutive size. The drive itself is scarcely larger than the disks it holds, measuring under 4 inches wide, 5 1/2" long and 1/2" high.

Instead of going for a standard beige plastic casing, DELL have given the *DX9* a black ruggadised exterior. Aside from making the drive look nice, this surface also serves a practical purpose. Because of the drives small size and its unusual sliding eject-mechanism, it would be difficult to eject a disk if the drive had a smooth finish – especially as most people tend to only use one hand. The apparent quality of build seems excellent except for one thing – the lead at the back that connects it to the Amiga or another drive. This lead slots into the back quite loosely and, while it may actually be quite secure, it gives the impression that one or two good twists in the wrong direction might damage the connection.

FOUR SQUARE HD DRIVE

SPEED ●●●●
While not blisteringly fast, this drive won't keep you waiting around.

INSTALLATION ●●●●●
True plug-and-play – no fiddling around with software patches and the like.

FEATURES ●●●●●
Reads Double and High Density disks with equal ease and looks nice too.

VALUE ●●●●
A mite expensive when compared with other drives, but worth it just for the sheer pose value.

"There may be other HD floppy drives that are cheaper, but there are none that are so attractive"

88%

PARANORMAL ACTIVITY?

Installing an HD drive has caused a number of our readers problems, most of which are due to the software patches that most drives need fitted to work correctly. You can imagine our surprise when we found that there where no such patches included with this drive. After deciding to try and just plug the drive in, we were pleasantly surprised to find that it was really auto-configuring and needed no software. There might even be reason to suspect that some sort of paranormal goings-on might be involved as the drive even worked with Nick Veitch's cranky old A3000 that simply does not like floppy disks or any other external drives we've tried.

Performance wise the drive is not likely to set new speed records, but neither is it a slouch. However, there is one detail you might want to bear in mind if you are considering purchasing this machine. There is no through-port which means that the *DX9* will have to be at the end of any floppy drive chain and that you can only have one *DX9* attached at any time. Despite this minor inconvenience, this is definitely a worthwhile purchase for anybody wishing to buy a high-quality, not forgetting darned sexy, external HD drive. Now if only I could detach it from my home machine, it's somehow managed to get stuck... ☹

EPIC MARKETING

CD-ROM SOFTWARE

EMULATORS UNLIMITED (CD117) £19.99

Emulators Unlimited contains Software emulation tools for the Amiga & PC. Spread over the two platforms are emulators for: Apple, BBC, Commodore 64, Commodore VIC20, Amstrad CPC, Apple Mac, Gameboy, Atari ST, MSX, Apple200, Atari 800, Atari1040ste, Sinclair QL, Unix and more. CD-ROM Round-up

PHASE 3

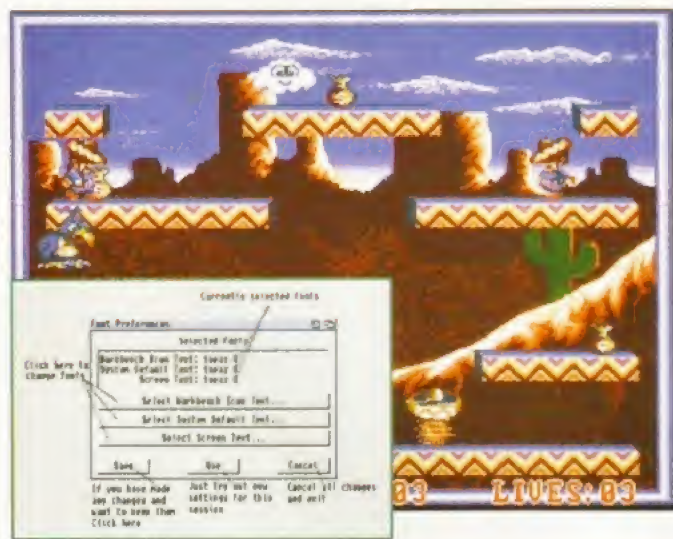

■ E.M.Computergraphic ■ 01255 431389 ■ £24.99

EM are famous for their quality clipart and fonts, which have become essential elements for many DTP users. This new CD is the third in their series and has much of their library on it. There are fonts in just about every type you could possibly want and it also caters for users of *Pagestream*, *ProPage*, *Wordworth* and any other program that uses scalable fonts. The clipart is, as always, incredible with superbly scanned images in formats everyone can read including 256 and 16 colour versions. There is also clipart on the disk covering areas such as Sport,

Transport, World Clips and Events. If you haven't already got a CD full of fonts and images, then this is an essential buy.

"If you're into DTP then this disk is a must have"
90%

NOTHING BUT GIFS AGA

■ 17 Bit Software ■ 01924 366982 ■ £19.99

A CD full of GIF images and nothing else sounds quite boring and frankly, after you've looked at some of the images, you can't help but feel it is a bit of a waste. However, if you want a great selection of digitised, rendered and hand drawn images this is a huge collection. The image quality is excellent on most of the images, but some of the renderings are somewhat basic and there is quite a lot of repetition. The section called 'glamour' is somewhat deceiving – they say there are babes in swimsuit's but I found it hard to find any wearing one! The interface is easy, with thumbnail representations to choose your images from and the Amigaguide viewer shows a description next to many of the images for quick browsing. If you need a good collection of high quality images and have a program that can import them then this is a reasonable collection of images you may find some use for.

"Lots and lots of pretty pictures"

F1 LICENCEWARE

■ Active Software ■ 01325 352260 ■ £32.99

Licenceware is a concept that allows authors of small programs, that aren't usually suitable for commercial release, to sell their programs for about £5. This disk is filled with their first hundred products and caters for almost all users. There are some very useful programs for beginners, as well as some superb educational software that will keep the parents happy and give the kids a reason to buy! For the more serious users there is a selection of high quality programs, such as the excellent

Blackboard 3 image processor. There are also several games, including some remakes of Spectrum classics. A few of F1's music disks contain a variety of modules, ranging in style and quality with some music manipulation software. The interface is Amigaguide, with a choice of viewing the programs in alphabetical order and the option to put the programs onto floppy disk. Overall a good disk with an excellent selection of programs.

"A good all-rounder"

← **AMINET 10**

■ GTI ■ 0049 6171 85937 ■ £14.99

Yep, it's that time again – yet another Aminet CD. However, this is a special edition and not just because its the tenth. *Aminet 10* contains the full version of *Pagestream v2.2* and a special edition of *TypeSmith v2.5*. Both of these programs were the best of their kind and are a worthwhile addition to any DTP enthusiasts software collection.

Of course there is the usual collection of programs and utilities taken from the site itself. For the price of £15 getting loads of PD and Shareware plus a full commercial program can't be bad.

"Another fine Aminet collection with an added bonus"

91%

Maximum MODS

■ LEGENDARY DISTRIBUTION ■ 001 519 753 6120 ■ \$34.95 (£22)

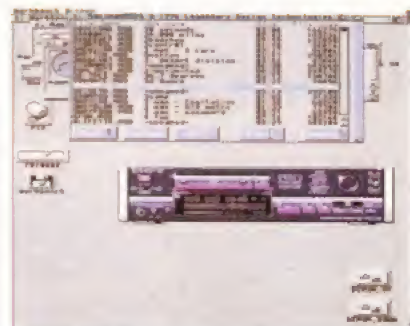

As you've probably guessed from the title, this is a CD-ROM stuffed full of music modules. In total there are over 4,200 modules which, according to the manufacturers, if played continuously amounts to 241 hours of music.

This disc is intended for use with both the Amiga and the PC so programs have been supplied for both machines. The Amiga front-end can be installed to disk and looks very much like a hi-fi CD deck. You can select more than one file by holding down shift and you can also perform searches.

The modules themselves are okay, but it's very hard to find the type of modules that you like as they are not categorised. As a module CD *Maximum MODs* is only average and is hampered by the lack of categorisation.

"A decidedly average hodge-podge of mods"

75%

TEXTURE PORTFOLIO

■ GROUND ZERO SOFTWARE ■ 0117 9076733 ■ £29.99

This CD got into my good books straight away by containing a colour printout of the images it contains. *Texture Portfolio* is a collection of textures that I have been waiting a while for and now that it's arrived I'm quite impressed by the professionalism of its production – except for a few duplicate images.

The images are well categorised, so you don't have to go wading through the wrong directories trying to find a particular type of file. Of course the printed index helps a great deal as well. Not only can you see what an image looks like you'll also find its file name written underneath.

The images are of excellent quality and should be perfect as multimedia backdrops. However many of them are a little too abstract to be used effectively in 3D applications.

"A collection of images of the finest quality"

Workbench

Life is full of mysteries and the Amiga is certainly no exception. Graeme Sandiford knows all about the quiet strength and willfulness of his favourite machine. So, send your queries to Workbench, *Amiga Format*, 30 Monmouth Street, Bath, Avon BA1 2BW.

PORTABLE PROBLEM

I'm writing regarding the letter "CD-ROM Conundrum" in AF 80 page 106. Not wanting to appear stupid, but having already used up my PCMCIA slot how would I connect a CD-ROM drive? If a CD drive can be used as a portable CD audio player, can it be done the other way?

D. Russell Oxon

There are other ways to fit an SCSI interface to an A1200 other than the PCMCIA slot. Firstly, there is the Dataflier SCSI interface which fits inside the A1200 to the IDE port. Many accelerator cards also feature optional boards for SCSI interfaces. Yes, some portable CD-ROM drives can double as audio players but this does not mean that any portable audio player can be used as a CD-ROM drive: they lack the necessary SCSI interface.

DRIVES ZAPPED

Partitioning a drive is not hard - if you have the right software.

My problem is that I recently bought a Zappo SmartStor plus 261 Mb hard disk drive. After three replacement hard drives and one replacement A1200 the unit eventually started to work. However, recently my workbench partition vanished and having made no back-up copies I had to re-format the drive. This was unsuccessful. The partition wouldn't format so I initiated a RDB reset and re-partitioned the drive. Now I have two partitions, AQ0:COPY (8mb) and no default tool. When I try to format either partition the message "Please insert disk to be formatted into drive AQ0" comes up. Once formatting has started the message "Format Failed Error During Format" pops up. Unfortunately the company who sold me the drive, Calculus Computer Stores, Preston, has ceased trading and so has the parent company Indi. Please could you help me or pass me on to someone who can, as I am getting tired of having to wait for disks to access whilst playing games and running Wordworth.

James Wilson
Cumbria

Urgh, sounds like a messy system. The first lesson is of course to make backups, but that's easy to say after the event. The next lesson is not to mess around with the RDB. I'd guess the hard drive is now thoroughly confused. Did you receive a utility such as RDPprep or HDToolBox? If not, go ask a

PD library and get one. You need this utility to properly prep the drive and partition it. You should not perform any formatting at this stage. Use a diagnostic program such as SnoopDos to determine the name of the device driver and use Information to feed this into the HDToolBox icon. Then prep and partition the hard drive, and when reset and back to AmigaDOS, format it using the standard Amiga formatting command, although make sure you use FFS.

LACK OF BREATH

I own a 1200 with a 120 Mb HD, 4 Mb Ram, a 50Mhz MBX 1230XA and a dataflier SCSI device. Even with this spec I still couldn't run last month's Breathless demo at 1*1 pixel display at a decent speed on any screen size bigger than the minimum. Is there any way to expand further, maybe using the SCSI device, for around £200, to make games like Breathless run smoothly?

Jonathon Pollard

Sadly, no there isn't any way of using the SCSI to speed up the processing power of the Amiga. SCSI is nothing more than an interface and it won't provide any kind of performance boost no matter how much you spend on it. If you want to enjoy the 1*1 pixel mode in larger than minimum size AND enjoy super-smooth movement then you'll need more power - and that means a 68040 or a 68060 card. Sorry!

IF YOU HAVE A QUERY...

Graeme Sandiford

At *Amiga Format* we aim to answer as many questions as possible. Unlike some magazines, we don't just concentrate on our areas of expertise - we take on all your problems (as long as an Amiga is involved). Here are a few tips on sending in questions:

- Be concise.
- Detail the actual problem as best as you can.
- Describe the events that caused the problem.
- Give full details of your equipment.
- Make sure your question is relevant and wouldn't be more easily solved by contacting the dealer from whom you bought the goods.

Bear these points in mind and fill in, photocopy, or copy the form below as best you can.

Send your letters to Workbench, *Amiga Format*, 30 Monmouth Street, Bath, Avon BA1 2BW.

THE FRENCH CONNECTION

I have been given my system by my father who lives in Switzerland and so all the documentation is in French. My first problem is where I can buy some English manuals from.

I have seen the ROM chip E586 Module advertised - is it possible to fit this to my A-max card to enable me to emulate a PC or would I have to buy the EMPLANT board? I have been told by my father that if I crash the computer while using the A-Max emulator, I won't be able to use it without it being reset. How can I reset the card myself? How much would it cost to install an AGA chip to allow me to use VGA graphics if I get PC emulation?

If I have the Genlock card installed, it prevents the monitor from displaying the picture. The monitor is plugged into the smaller screen port. I understand that I won't be able to see the output from the Genlock card via the monitor but is there any way to make the screen usable at the same time as having the card plugged in? Is there any way to use the monitor with the genlock card via an adaptor as the sockets are two different sizes?

I am also having trouble getting decent quality out of the printer. This page was printed using the graphics option at 300dpi. I have used the NLQ setting on the print menu but it doesn't print correctly although the quality is better. How can I get the quality of the NLQ page and have it print out correctly? The word processor I am using is Excellence! v3.00.

Ryan Felber
Somerset

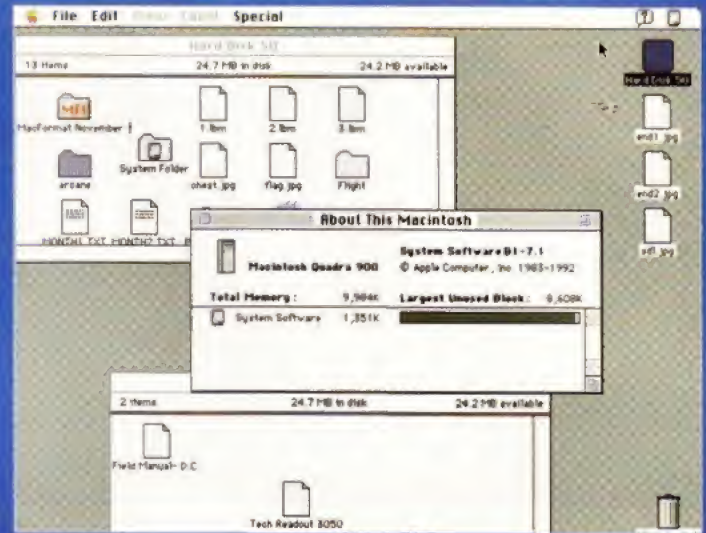

I would strongly recommend that you get on-line as soon as possible so you can chat about your AMAX problems with other users. In the meantime, the PC emulation module you describe is solely for the Emplant board so it will be no use to you.

Are you sure you need to reset the AMAX card, rather than only having to reset the computer? The only way I can think that the AMAX card would need resetting would be if it contained its own battery-backed memory. Not having the documentation to hand I don't know for sure, but there may be a reset switch on the card. Alternatively removing the card and replacing it may reset it. I'm not convinced that simply hard

resetting the Amiga (switch it off for 30 seconds) wouldn't solve the problem though.

I'm not sure which model of Amiga you have, and this makes a difference. Plug-in Genlocks for the Amiga are few and far between. I can only guess that when the genlock is used the output to the monitor is switched off to prevent overloading the video circuitry (this is what the OpalVision card does anyway). You should be able to view the genlock output on a video compatible monitor, or a television set with a suitable input. This is the best you can do with that set-up.

First of all, try a modern word processor such as Final Writer or Wordworth. Secondly get hold of a printer utility program such as TurboPrint Professional (Wizard Developments 01322 272908).

While there's no PC module for A-Max, there's supposed to be one for Emplant.

← MEMORY SHORTAGE

I bought an Amiga A600 in 1993 and I am pleased to say that I have only had a few minor problems with it... until now! The problems started when I fitted my 2.5" IDE hard drive. First, the 'graphics memory' displayed on the Workbench screen decreased from around 1,800,000 before HD installation to 1,162,544 after - surely the HD does not take up this much memory? Even when I disconnect the HD the memory only goes up to 1,600,000. As a result of this low memory, the computer crashes frequently even when games are run from floppy. Again, when I disconnect the HD, games still crash frequently. What can I do? Another problem is running of programs from HD such as Pagesetter II, Kindwords III, Home Accounts 2 and Syndicate, which, even when correctly launched, display the message - "Unable to open your tool 'Pagesetter II'" and so on. What can I do? If these problems cannot be easily sorted, I will

consider upgrading to an A1200 with an accelerator with 4Mb RAM - what is the best accelerator to buy if I will be using programs such as Pagesetter II and Wordworth 3.1 SE most of the time? I don't understand the difference between PLCC - type FPU, PGA - type FPU, MMU and the actual processing speed in MHz. Could you please explain it all as if I'm a six-year-old.

Gary Benson
Bristol

Although a hard drive does take up memory, it shouldn't consume that much. Type "addbuffers" and the name of the drive to make sure that nothing daft is happening: you should get the default number 30 returned. An extra RAM disk hasn't suddenly appeared on your Workbench has it? One possibility is that there is a program being executed from the startup-sequence or user-startup scripts or from within the WBStartup drawer and that this program is taking the memory. It's really bizarre that removing

the hard drive still leaves you with a memory shortfall: if I were you I would get hold of some virus checking software immediately.

When installing software onto Hard disk there is more to it than copying all the files into a new drawer. The software will frequently want to access various files, and in many cases it only knows where they are because the path is set up something like "pagesetter:file.dat". When you run from floppy, the disk itself will be called "pagesetter:" and so this is how the program can find the data. However, when you copy the files to hard disk there is no disk or device called "pagesetter" anymore. Instead you need to fool the computer into thinking there is by using "assign". If you enter something like:

assign pagesetter: work:utilities/pagesetter
Then when the software tries to find "pagesetter:" it will look in the Work partition of the hard drive, and then in the utilities and pagesetter drawer. Add the assign to the user-startup script so that it is executed every time you switch the computer on.

When Mr Amiga wants to go faster, he needs a great big chip called a "processor". Like a food processor, the faster it goes, the happier Mr Amiga is. Processors are measured in painful units called "mega-hurts". The more "mega-hurts", the better. 30 mega-hurts is good, 50 is better. Mr Amiga sometimes also needs an extra chip to help him with really, really hard sums. These chips are called FPUs and they are special because they come in two flavours: PLCC chips don't have any sharp bits at the bottom, but have wire around the edges and PGA chips which have sharp bits at the bottom. You need the right sort to fit into the socket you have on your accelerator card.

Mr Amiga sometimes forgets things because he doesn't have enough memory. Sometimes he can get the food processor to help, if it has a magic part called an "MMU". With special programs, the MMU can help Mr Amiga remember more than normal.

You would be surprised at the amount of things loaded into memory at startup.

PC BACKUP

The major partition of my HDD won't validate but I can still read from it. I have tried Disk Salv but to no avail. I have considered buying the commercial version as a last resort but I have had another idea (over 100 Megs worth of data would be lost if I just formatted the disk so I don't really want to do that). I have access to a PC with enough space (250 Meg or so) on its HDD to fit the contents of the dodgy partition of my HDD on. What I am hoping is possible is that I can upload the contents of my disk onto the PC's HDD and format my drive. Then download what I uploaded to the PC. Please can you tell me what cables and what additional software (if any) I will need for both machines and just how I would go about executing this task. Cost is a major factor so keep it as cheap as possible (but no DIY cables thanks). Do you think there is a large risk that if I do format my HDD that it won't work again.

On a completely different point I would like to have a directory on my HDD (the small partition that I can still write to anyway) which holds scripts whose names can be typed anywhere from DOS and the scripts will be executed. Ahh, just create a path to that directory and make sure the properties of the scripts were set with a script flag I thought. Unfortunately this does not work and I seem to remember you saying about *Pure* but you weren't sure. So, how could I do it (I really don't want to put them in C because I don't really want them on my System partition).

Nick Donnelly
Cambridgeshire

As you say, the disk is invalid and so you cannot write or delete anything from it. It's caused when the Amiga is switched off or crashes when something is being written to the drive. When this happens to my system I use a commercial package called AmiBack Tools and this sorts the problem out in a few moments. HiSoft sell their own disk utility suite too. However, your plan to back up the hard drive to a PC and then reformat will also work. In fact, it will de-fragment your drive in the process which will speed things up ever so slightly.

To transfer the files you can either use some floppies and spend an entire day carrying them back and forth, or else connect the two computers together using their serial ports. To do this you will need to buy a NULL MODEM cable. You could make one up and save some money: it's not hard, honestly. You will then need to use terminal emulation software on each machine (Ncomm or Term on the Amiga, Terminate on the PC). Then copy all the files over using ZModem. If you have a partition that you can still write to on your Amiga, use it to store LHA'd versions of the files on your broken partition. Sending LHA'd files will be quicker. Um... that's exactly how it works! If you create a script file and set the script bit like this:

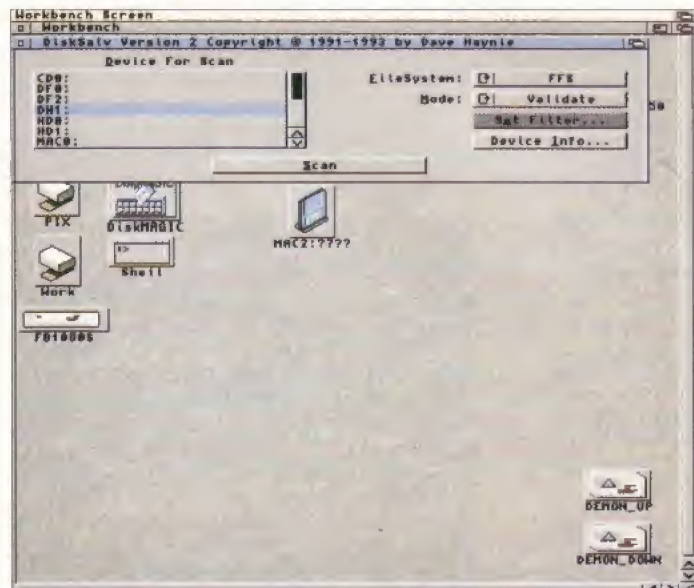

```
protect yourscript +s
```

and then add a line such as:

```
path add myharddrive:myscripts
```

then it will work.

The PURE bit is only needed to force some AmigaDOS commands into being resident — a completely different kettle of fish altogether. All I can suggest is that you make sure you include the PATH command in the user-startup drawer so that it is active every time you reboot.

If your hard disk has been invalidated then *DiskSalv* might be able to help.

Amiga.net

Which Web browser?

This month Darren Irvine takes a closer look at the current crop of Amiga Web browsers that are appearing to challenge the traditional *AMosaic*.

This is Java running under Windows 95 - although P'jami won't look exactly like this, most of the functions should be the same.

For the past couple of years, Amiga users have had to make do with *AMosaic* when browsing through the pages of the World Wide Web. When it first appeared, *AMosaic* actually wasn't all that far behind the then standard NCSA Mosaic browser. Unfortunately, there have been some major developments in the field of HTML browsers since then - chiefly by the ubiquitous NetScape and also by Sun with their HotJava system.

However, until they're all available, it really wouldn't be fair to make a final judgement as to which is the better system.

AWeb

Although *AWeb's* main claim to fame is as an HTML - 2 compatible Web browser, many people will also be attracted to it by the fact that it doesn't require the dreaded Magic User Interface (MUI) to be running on your machine. Instead it relies entirely on Amiga-native

working properly, since *AWeb* makes extensive use of datatypes.

Unfortunately, at the moment, the only way to legally obtain a copy of *AWeb* is to subscribe to the bi-monthly Dutch Amiga Magazine, and no beta versions are available. These restrictions may seem a bit tight, but the author has had problems with illegal versions of *AWeb* being made available on the Internet.

Hopefully however, *AWeb* will be available from the usual Aminet mirrors by the time you read this. An announcement concerning the release will be made to the Usenet newsgroups comp.sys.amiga.networking and comp.sys.amiga.misc.

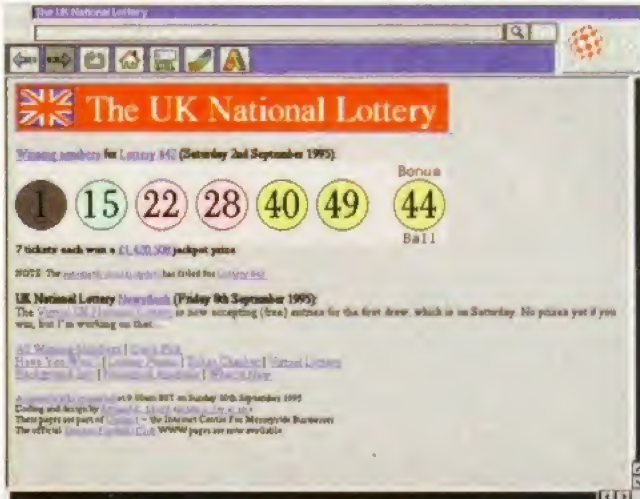

IBrowse

The developers of *IBrowse* are some of the old developers of *AMosaic*, and have 2 years of web experience from porting the original *XMosaic*. Although it is by far superior to the old system, unsurprisingly *IBrowse* is similar in some ways to *AMosaic* - chiefly in its reliance on MUI.

There are many new features however, including support for multiple windows and multiple network connections. Despite the use of MUI, *IBrowse* is reputed to be much faster than *AMosaic* - typically 1.5 to 3 times faster

AMIGA TECHNOLOGIES SURFER PACK

Just when things looked like they were becoming clear on the Browser front, AT have confused the issue by releasing an Amiga pack containing their own browser and their own Internet software based on a version of the old Commodore AS225r2 rather than AmiTCP. The pack includes a 2Mb Ram A1200 with a 270Mb hard drive and a 14K4 modem. The included browser is called "Voyager" - the new name for the much rumoured "MindWalker".

The browser we're all used to - *AMosaic*.

BOOPSI gadgets instead. Developed and designed completely by Yvon Rozijn, *AWeb* can run on either the usual AmiTCP stack or alternatively on Inet225. It can also run without a TCP/IP background system, allowing the loading of local HTML files. Due to the fact that MUI is not needed, *AWeb* should be much faster and less memory hungry than *AMosaic*.

AWeb can run in its own screen, or as a window on Workbench, and if you are thinking about moving to *AWeb* from *AMosaic*, you will be glad to know that it supports *AMosaic* style hotlists.

You will need to be running OS3.x in order to get *AWeb*

Welcome to the THORAX Test Web Site

Hi, and welcome to this exciting Web site which was created to test the authoring tools provided by the HTML editing program THORAX for the Amiga. As you can see, there is no problem including graphics and there is also support for some of the more NetScape friendly HTML tags as well.

Not exactly a browser, but apparently 'The HTML editor of the Future'.

NEW AMIGA NET SOFTWARE – THORAX

It remains to be seen which of the new Web browsers proves to be the best in the long run. If you are interested in creating your own HTML documents to place on the Web, you will need an HTML editor – so far a type of software few and far between on the Amiga. Via my usually unreliable RumourMill sources, I can bring you news of a system under development called "Thorax".

The finished version of Thorax will apparently support some NetScape style extensions to the standard HTML language definition – such as the handling of background textures and frames, as well as more standard extensions such as forms.

You might be wondering what use this will be to you as an Amiga user, as none of the currently available browsers (nor those on release soon) will support these extensions. However, it is a fact of life that if you are

creating pages to put on the Web, then many of the users accessing those pages will be doing so using NetScape, and so being able to create NetScape compatible HTML documents is a bonus.

Unfortunately Thorax can't be used as a standalone browser, since – apart from not having the code to do so – it can take quite a long time to display each page – several minutes in some instances. So far the program is not available even as a Beta, as the author has decided to restrict testing to a user group – perhaps taking note of the illegally released versions of Aweb that have been doing the rounds on the Net.

Whenever a version becomes available, you can be sure I'll let you know where to get a copy because Thorax should become an extremely useful addition to the Amiga Web developer's Arsenal.

when accessing the Net and up to 30 times faster when performing screen-refreshing activities such as resizing a window.

Perhaps more importantly, *IBrowse* will support all HTML - 3 and NetScape commands. Like *AWeb*, *IBrowse* will work with either AmiTCP or AS225, and can run without either for local page accessing.

A version of *IBrowse* is available now for download from the Omnipresence' Web site – see the boxout for the address.

RUMOUR MILL

This month (in a shock change of tack) Rumour Mill brings you news of something that might even be true. Amiga Technologies GmbH has done a deal with set-top appliance manufacturer VISCORP to develop an Amiga-based set-top system. This new system will integrate things such as phone lines and internet technology with your TV set, and is set to provide a complete and practical solution for interactive TV services. The system will also be of use in Home Shopping systems and will allow games to be played across it's network.

JUGGLER

Yet another system in the early stages of development is *Juggler*. When it becomes available, *Juggler* will also not require the use of MUI – a major factor in some people's estimation. *Juggler* will provide support for all HTML codes up to HTML - 3, but no support is intended for NetScape or Java extensions.

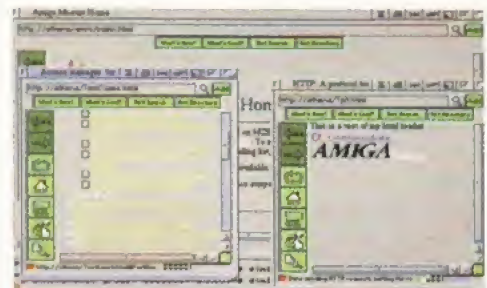

P'JAMI

Perhaps the most oddly named of the current systems, *P'jami* is also about the furthest behind in development terms. It is intended to be a part of the *Sun Java* system to the Amiga. A number of different developers are involved and so far they appear to still be at the stage of reverse-engineering the existing *Sun HotJava* browser.

CONCLUSION

Well – so far the front runner in the browser stakes appears to be *AWeb*, with *IBrowse* following a very close second. The screenshots of *AWeb* certainly look very nice, and it looks like shaping up into a very nice system indeed.

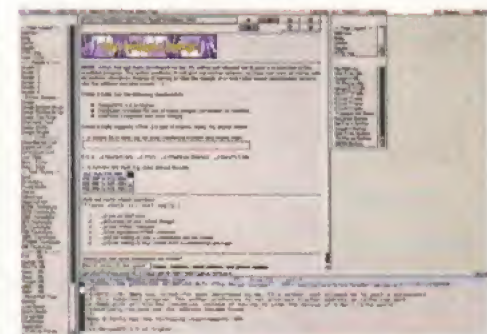

IBrowse appears to be the furthest along the development cycle and a Beta version has been

ibrowse looks a lot smarter than *AMosaic* too – although I'm not too sure about the over-reliance on green as part of the colour scheme.

Will *Juggler* be the system to give *Amosaic* a run for it's money – at this stage we'll still have to wait and see.

Aweb appears to be shaping up into a very nice system and you don't need MUI to run it.

available for a while now – however it still requires use of MUI and if you are one of those people for whom this is a problem, you will have to wait for the release of *AWeb* until you can start browsing.

Current *AMosaic* users, on the other hand, will already be using MUI and should take a look at *IBrowse* as soon as possible.

FINDING MORE OUT

DW

Steve McGill introduces the second part of his video series.

At the end of every Beadle's Hot Shots, Jeremy Beadle invites the TV audience to send in their own productions. He promises that every video shown will win the creator £500.

Cue the oohs and aahs from the studio audience and then listen to what he has to say next: "All we need is the idea, we'll even help you with the editing."

This last part is important, for it implies that editing is difficult. In a way, Jeremy's correct. Editing can be the most difficult part of any production to get right. It's also the most satisfying to get to grips with.

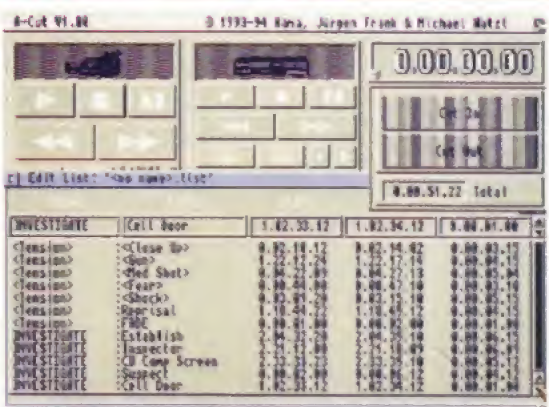

As a consequence though, watching Hot Shots is as good a place as any to pick up tips. Pay particular attention to the length of each production, the length of cuts, the continuity of the pictures and sound, and the use of special effects.

Each shot has a natural life time. Exceed this limit and the shot becomes boring. The knack lies in finding the point at which a shot starts being interesting and the point where the interest in the shot expires.

Just as Jeremy implies, editing is the most important part of a final production. It can also be the most difficult. It's the area where all the best shots and the best FX – both sound and graphics – are bolted together and shaped into a flowing narrative.

The inclusion of a jog shuttle on the Hama A-Cut makes it the only serious competitor to the KRP Edit Plug for editors on a budget.

The beauty of edit lists is that they can be cut and pasted like a word processor.

Do I want to use Timecode? The answer is a resounding yes. But first you have to find out if the source deck supports any proprietary timecodes other than the counter pulse – checkout the Timecode, Burning For Accuracy box.

The Panasonic NVS-88 camcorder writes VITC timecode to tapes. The Canon EX2-Hi and Sony TRV 3000 write RCTC to

The KRP software is the most powerful software available on any system costing under £500. Just a pity it isn't the easiest to use.

The Amiga has played host to several Edit controllers which when used properly can significantly reduce the time it takes to produce a video. By definition, they allow the editor more time to be creative and experimental.

Last month in DTV we looked at all the camcorders on the market with edit terminals. These terminals allow them to be controlled externally by an appropriately equipped Amiga. There are certain ground rules and questions that should be asked by anyone preparing to buy an edit controller.

tapes. Of the edit controllers currently on the Amiga market, only the Videopilot can read VITC. Whereas the Edit Plug, Hama A-Cut, and Edit Mate can all read RCTC. Linear Time Code is trickier. At the moment, only the KRP TES series and the Videopilot will read and write LTC.

How much do I have to spend? The overriding factor aiming to thwart your decision is that of budget. It has to be

Continued overleaf →

The biggest problem with the Videopilot Edit Decision List is that the numbers have to be entered using the mouse or the console.

than the *Edit Plug*, it probably represents the easiest route into computer editing.

Next month we'll look at the price of putting some typical editing set-ups into practice. From basic assembly editing configurations to three machine set-ups that make creative use of a genlock. We'll cover a set-up for those on a tight budget and another for those with an aim toward starting their own business. See you then.

balanced against the cost of software, hardware and the results you expect to achieve.

The best value and least expensive of the current crop of edit controllers is the *KRP Edit Plug*. It comes in two guises – the cheapest of the two can control two source decks and one recorder, it costs £125 and represents excellent value for money. For those of you who expect to make use of a video mixer, there is also a version of the *Edit Plug* which has a General Purpose Interface (GPI) attached. It costs £25 more but increases the versatility and expandability of your set up.

It's worth searching around for the Videopilot at a bargain price.

The *Videopilot* costs in excess of £1000 RRP. Look out for special offers around half that price.

More convenient and easier to use than the *Edit Plug* is the *Hama A-Cut*. It costs £189 and features a jog shuttle dial which allows the editor to control a compatible source deck (the *Panasonic HS-1000* and *Sony EV-S1000* for example) using the jog shuttle. Selecting where you want cuts to start and finish is as easy as pushing a button. Ultimately less versatile and expandable

EDIT CONTROLLERS AND WHERE TO GET THEM

Edit Mate: CamLink. Tel: 0181 543 3500

Timecode, Burning For Accuracy

A timecode deck like this is a must for accuracy.

The Edit Plug is the most versatile and least expensive time machine added on the video mixer.

controller and the source machine. All of the edit controllers in this month's DTV can control source machines using the counter pulse.

RCTC: Rewritable Consumer Time Code is a time code protocol developed by Sony for use with video decks such as the *EVS-9000* and camcorders such as the *Canon EX2 Hi* and the *Sony TR3000*. This time code can be written onto Hi-8 and 8mm tapes after the footage has been shot. It is a digital code which gives every frame of video a unique identifier. It is the only one of the codes here that can be read by the edit controller while in pause mode. The *KRP Edit Plug*, the *Hama A-Cut*, the *Videopilot*, and the *Edit Mate* can all read RCTC directly. The most convenient of the time codes outlined here.

VITC: Vertical Interval Time Code is embedded in the vertical blanking interval of the video picture. This requires the edit controller to have the picture pass through it so that the time code can be read. Although highly accurate when used with professional decks, VITC isn't usually reliable enough with consumer equipment. Only the *Videopilot* can read this type of timecode.

There are four types of time code available with consumer equipment.

COUNTER PULSE: It is the counter pulse that keeps the video picture stable and synchronised. Unfortunately counter pulses can never be as accurate in editing as a proprietary time code because there's no way of differentiating between one pulse and the next. Counter pulse information is transmitted along the control line between the edit

LTC: Longitudinal Time Code is an audio signal. It's recorded onto the mono linear track of a source deck. Also known as SMPTE (Society of Motion Picture and Television Engineers) or EBU (Engineering Broadcasters Union).

The *KRP TES* series of edit controllers and the *Videopilot* can not only read LTC they can write it as well. This is particularly powerful when experimenting with non-master tapes.

The World's FASTEST AMIGAS are on this page!

THE WORLD'S FASTEST... NO QUESTION!

NEW

CYBERSTORM II

NEW SECOND GENERATION OF THE FIRST EVER 68060 AMIGA ACCELERATOR
When you fit Cyberstorm II to your A3000, A3000T, A4000 or A4000T you can, for example, render a graphic with Imagine 2.0 software in just 2.45 minutes... Compare that with a massive 10.54 mins on a standard A4000 (940/25) With no jumpers Cyberstorm II is fully plug and play and A4000 users can choose between SCSI-2 and SCSI Fast and Wide options (A3000 users already have SCSI built into their Amiga hardware).

- Up to 128Mb of standard SIMMs can be installed and you can even transfer the 72pin SIMMs from your Amiga A4000 straight onto your new Cyberstorm.
- Options include a SCSI-2 module, or a SCSI Fast and Wide module (Available in April/May '96)

Cyberstorm II 68060/50...
50MHz 68060, 0Mb (Expandable to 128Mb) **£699.95**
SCSI-2 Module **£99.95**
SCSI Fast & Wide Module (April/May '96) **£149.95**
SIMM RAM Expansions (Please call for a range of SIMM prices)

Figures shown are in MIPS and taken from comparative performance tests using Sysbench standards (1230-IV, 1260, 2060) and Cyberstorm ratings (see 60 Nanosecond SIMMs)

BLIZZARD

1220/4

28MHz
68EC020
A1200 TURBO
4Mb, 32-Bit RAM
Expandable to 8Mb

Blizzard 1220/4 4Mb Turbo Memory Board

Offers by far the best price/performance ratio of any A1200 32-Bit RAM expansion on the market incorporating everything a good memory board should - such as a Real Time Clock, RAM expandability, optional FPU etc. With its Motorola Processor running the 32-Bit FAST RAM at an amazing 28MHz, the 1220/4 has broken all the barriers!

- Can be disabled in situ for full games compatibility
- Integrated 28MHz (68EC020) Clock Speed Doubler for up to 50% overall performance increase
- Factory Installed & Tested 4Mb 32-Bit FAST RAM
- Expandable to 8Mb with Blizzard Add-4 Board
- Integrated Battery Backed Real Time Clock
- Easy Trapdoor Installation - no modifications required and does not invalidate the Amiga Warranty

(Please note, A57 68020 board will disable the PCMCIA slot if fitted with over 4Mb)

1220/4 Turbo 28MHz (68EC020) 4Mb 32-Bit Fast RAM (Expandable to 8Mb)	£199.95
Add-4 Board - extra 4Mb for 1220/4 4Mb 32-Bit Fast RAM add-on	£169.95
Motorola Maths Co-processor 68882 PLCC type FPU, 33MHz	£59.95

THE AWARD WINNING A1200 RAM EXPANSION!

BLIZZARD

1230-IV

50MHz
68030
A1200 TURBO
ACCELERATOR - 0Mb
Expandable to 128Mb

The Blizzard 1230 MkIV Turbo Accelerator Memory Board

is the highest performing 68030 accelerator available for the A1200! With its 50MHz 68030 and MMU, the new 1230-IV offers EVEN BETTER PERFORMANCE at a LOWER PRICE! With a Sysbench rating of 9.91 (using a 60 Nanosecond SIMM) you can see the 1230-IV is very fast... a performance gain of up to 500% is achieved! Options via its Fast Expansion Bus include Modules such as a SCSI-2 Controller. An industry standard SIMM socket provides for up to 128Mb of non-configuring 32-Bit FAST RAM (or up to 256Mb with the SCSI-2 option using its extra SIMM socket).

- May be disabled with Simple Keystroke on Boot Up for Full Games Compatibility - Even with Badly Programmed or Older Software
- Battery Backed Self Recharge Real Time Clock
- High Performance Expansion with Full 32-Bit wide DMA
- PGA FPU Socket allowing Optional 50MHz (68882 FPU)
- Easy Trapdoor Installation - no modifications required and does not invalidate the Amiga Warranty

1230-IV Turbo 50MHz (68030 & MMU) 0Mb 32-Bit Fast RAM (Expandable to 128Mb)	£179.95
4Mb SIMM RAM Expansion (Fast 60 Nanosecond) 32-Bit, 72 pin (Call for Larger SIMM prices)	£109.95
Motorola Maths Co-processor 68882 PGA type FPU, 50MHz	£99.95
SCSI-IV KIT SCSI-2 Module for 1230-IV and 1260 (With additional 128Mb SIMM socket)	£89.95

THE WORLD'S FASTEST A1200 '030 ACCELERATOR!

BLIZZARD

1260

50MHz
68060
A1200 TURBO
ACCELERATOR & MMU
0Mb, Expandable to 64Mb

The Blizzard 1260 Turbo Accelerator Board

offers Amiga A1200 owners FULL 68060 POWER with a board that simply plugs into the trapdoor slot! Now your A1200 will operate at twice or even three times the speed of an '80 based upgrade and up to five times the speed of a standard A4000! If you want THE FASTEST A1200 available, fit a Blizzard 1260 Turbo to your Amiga now!

- May be disabled with Simple Keystroke on Boot Up for Full Games Compatibility - Even with Badly Programmed or Older Software
- High Performance Expansion - Full 32-Bit wide DMA
- Battery Backed Self Recharge Real Time Clock
- Does not invalidate the Amiga Warranty

1260 Turbo 50MHz (68060 & MMU) 0Mb 32-Bit Fast RAM (Exp. to 64Mb)	£599.95
SCSI-IV Kit SCSI-2 Module for 1260 and 1290-IV (With additional 128Mb SIMM socket)	£89.95
4Mb SIMM RAM Expansion (60ns) 32-Bit, 72 pin (Call for Larger SIMM prices)	£109.95

EASY TRAPDOOR INSTALLATION... No modification necessary. Reliable low heat output.

1260 & 2060 TURBO BOARDS HAVE A FASTER MEMORY DESIGN THAN ANY OTHER EXPANSION!

Blizzard 2060 50MHz 68060 A1500 or A2000 TURBO ACCELERATOR & MMU 0Mb - Expandable to 128Mb	£699.95
--	----------------

The Blizzard 2060 Turbo Accelerator Memory Board offers A1500 and A2000 owners the same specification that the Blizzard 1260 Turbo achieves but also includes built in SCSI-2! So, if you want the fastest A1500/2000 around with FULL 68060 POWER... fit a Blizzard 2060 to your Amiga now!

Please note Memory, SIMM and FPU prices may change without warning due to exchange rate fluctuations. Please confirm price prior to ordering. CALL TO CONFIRM AVAILABILITY BEFORE MAKING A LONG JOURNEY TO VISIT US. OUR OPENING TIMES ARE... Monday to Saturday, 9am until 5pm

All Blizzard and Cyberstorm products are hand made MOTOROLA 68060/68060 series processors (not second hand) as in some of our competitors brands! They always run WITHIN the electrical timing specifications laid down by Motorola to prevent any possible overheating/reliability problems. When you pay for a new 50MHz CPU for example, that usually will not get you a 60-ns or even a 28MHz CPU 'checked' to 90MHz! Look out for the MOTOROLA MOTIVATED logo - your guarantee of our commitment to quality and reliability. BEWARE of 'checked' CPU's!

OUR RANGE HAS WON MORE AWARDS THAN ANY OTHER...

What the Magazines think...

Blizzard products have consistently achieved the highest magazine accolades and awards!

Amiga Shopper said "...the Blizzard 1260 is destined to become the ultimate object of desire for A1200 owners" - 91% STAR BUY Award

Amiga Computing "...if you want the fastest Amiga in the World, get this board!" - 92% BLUE CHIP Rating

Amiga Format "...Ride on the fastest A1200 in the World." - 95% GOLD Rating

How to Order from GH...

BY PHONE: Simply call our order line. We accept VISA, Mastercard, Access, Switch, Connect, Delta AMEX and Lombard Creditcharge (most 'store cards' are Lombard eg. Dixons, Currys etc) - WITH NO TRANSACTION SURCHARGES!

BY POST or FAX: Include your name, address and daytime/evening phone/fax number plus order details. If charging a credit/debit card include... number and valid from/expiry date (and issue number with Switch cards). Make Cheques (please allow 7 days clearance), Drafts or Postal Orders payable to Gordon Harwood Computers Limited.

GH PRICES: Please remember to confirm prices in case you are looking at an 'old' magazine. Prices can change (up or down) before the magazine's cover month has passed. Please confirm before sending orders by post. Prices inc. VAT at 17.5%.

ORGANISER 2

AMIGA FORMAT 92%

Organiser 2 is the latest release of Digita's award-winning software. We gave it a stonking 92% in the February issue and gave you a time limited working version to sample on the coverdisk.

"The best Amiga PIM currently available."

MONEY MATTERS 4 AMIGA SHOPPER 90%

Keeping track of all your finances is easy with NEW *Money Matters 4* from Digita. It's the ideal starting point if you want to be in control of all your finances.

"The ideal package for managing your personal or small business finances."

BENEFITS TO SUBSCRIBERS:

- Bonus subscriber disk packed with useful software every month.
- Subscriber-only "BackStage" newsletter.
- Never miss an issue – every one will be delivered direct to your home.
- SAVE £££s on software with our exclusive subscriber offers.
- Full price protection for the length of your subscription.

Pay as little as £27 for your subscription to Amiga Format

Direct Debit is the easy way to pay, it saves us admin costs so we pass those benefits on to you – you save even more money on your subscription. You can pay in smaller more convenient amounts, plus you're protected by our no-risk guarantee – cancel at any time and receive a refund on all un-mailed issues. What could be simpler? Return the form on page 98 and we'll do the rest.

The Direct Debit guarantee

- This guarantee is offered by all banks and building societies that take part in the Direct Debit scheme. The efficiency and security of the scheme is monitored and protected by your own bank or building society.
- We will debit your account with the full amount as soon as your instruction has been processed. Thereafter we will debit your account on the anniversary of your subscription.
- If the amounts to be paid or the payment dates change, you will be told of this in advance by at least 14 days.
- If an error is made by us or by your bank/building society, you are guaranteed a full and immediate refund from your branch for the amount paid.
- You can cancel a Direct Debit at any time by writing to your bank or building society. You must also send a copy of the letter to Future Publishing.
- Banks and building societies may not accept Direct Debits from some kinds of accounts.

Final Writer Masterclass

TUTORIAL PART 2

In the second part of this masterclass, Nick Veitch gets even more masterful and explains just how useful master pages are.

The last Final Writer tutorial (A/82) looked at text styles and how to apply them to your own text to make creating documents easier. In a way, we are doing the same thing this month, but this time with the pages of the document.

A master page is a template upon which all the pages of the document are based. Whatever appears on the master page will also appear on any other page in the document. If you are setting up a large document with many sections, you would probably design a master page for each section.

In essence, the master page is the same as any other page. You can type in text, load graphics, insert special functions – but really you are building a frame for your entire document.

The elements of the master page should be useful, but not distract from the contents of the page. Things like page numbers and section guides are a good idea, to help readers navigate through a large document.

To begin editing the master page, simply choose "Edit master page" from the View menu or click on the gadget from the tool bar or palette.

Click on this gadget to edit the right hand Master Page.

A top heading for your page is de rigueur as far as I'm concerned – otherwise how are people going to know what they are supposed to be doing? This is probably one of the most straightforward things to add to the master page.

It is easiest to position this item as a text object, rather than editing the header and footer margins of the page. Simply type the text you want into the normal text box and then select it (by clicking and dragging or just multiple clicking on the text). Now select the Text Object gadget from the tool palette. the text will now magically appear in a small box all of its own. You can position this anywhere you like on the page and resize it to your hearts desire. If you want to change the text, style or colour, double click on the box and a small window will pop up, allowing you to make adjustments.

In this sample document, text objects were also used for the index sidebars.

The Text Box gadget turns text into a scalable object.

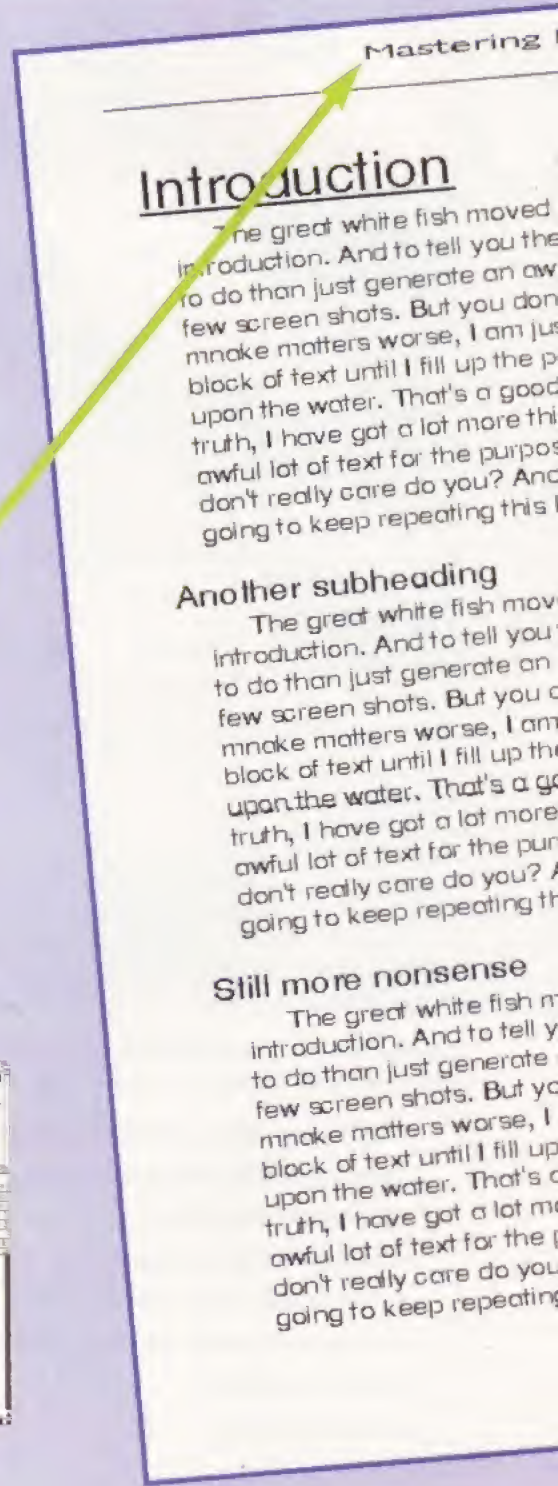

FONT PROBLEMS

A few people have encountered problems using Workbench Compugraphic fonts with Final Writer. As we stated in the last installment, this is a far from ideal situation, but they will work. Unfortunately, older versions of the fonts (such as those supplied with Workbench 2) are incompatible, and many PD fonts are incorrectly formed and will not work either.

An uninspiring start, but by turning this into a text object we can start doing some master page magic.

Introduction

The great white fish moved introduction. And to tell you the to do than just generate an aw few screen shots. But you don't make matters worse, I am just block of text until I fill up the p upon the water. That's a good truth, I have got a lot more thi awful lot of text for the purpos don't really care do you? And going to keep repeating this

Another subheading

The great white fish mov introduction. And to tell you to do than just generate an few screen shots. But you c make matters worse, I am block of text until I fill up the upon the water. That's a g truth, I have got a lot more awful lot of text for the pur don't really care do you? A going to keep repeating th

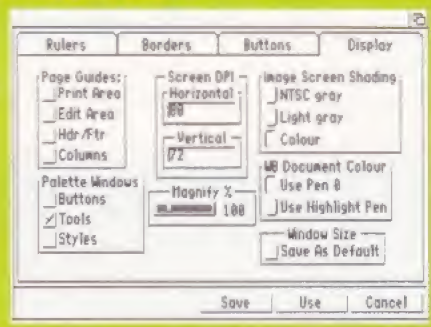

Still more nonsense

The great white fish m introduction. And to tell y to do than just generate few screen shots. But yo make matters worse, I block of text until I fill up upon the water. That's a truth, I have got a lot m awful lot of text for the p don't really care do you going to keep repeating

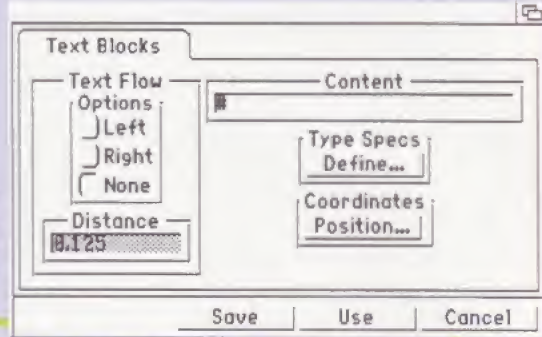

USING THE TOOL PALETTE

On some occasions it is useful to access the Tools from the tool palette, instead of trying to find everything in the menus. The tool palette can be turned on (it is off by default) by choosing Preferences from the View menu. Under the Main subheading, you will find the gadgets for turning on and off various palettes. I recommend that for this tutorial, you turn on the Tool palette.

Text boxes can be changed in a similar way to graphic objects. Double clicking on them will bring up this requester.

Master Pages

Introduction

on the water. That's a good truth, I have got a lot more things a lot of text for the purposes of a really care do you? And to going to keep repeating this . The great white fish movedroduction. And to tell you the things to do than just generate an es of a few screen shots. But you to mnake matters worse, I am just ck of text until I fill up the page.

ed upon the water. That's a good he truth, I have got a lot more things awful lot of text for the purposes of a can't really care do you? And to just going to keep repeating this e page. The great white fish moved Introduction. And to tell you the things to do than just generate an poses of a few screen shots. But you and to mnake matters worse, I am just is block of text until I fill up the page.

ed upon the water. That's a good he truth, I have got a lot more things awful lot of text for the purposes of a can't really care do you? And to just going to keep repeating this e page. The great white fish moved Introduction. And to tell you the things to do than just generate an poses of a few screen shots. But you and to mnake matters worse, I am just is block of text until I fill up the page.

The side index things here are created in two stages. The first stage is to simply create some solid graphic boxes. create one box using the filled box tool from the palette. It is a good idea to work out the size you need by calculating the space down the side and dividing it by the number of sections you will have. You can now double click on the box and set the exact measurements in the requester which appears.

When you have one correct box, duplicate it, and place it exactly underneath the first (again, the position can be entered directly by double-clicking on the box and entering the correct values. This is also where you can select the colour of the box). I have coloured the remaining boxes yellow, so when printed out on a mono printer, they will be a very light grey.

To overlay the text on the boxes, simply type in the text, select it and create a text object (see explanation for the page header). The text was then rotated through 90 degrees using the menu option Graphics>Rotate tool. You can obviously rotate the text to any angle you want, but a right angle is more conventional for this sort of thing. The final touch is to double-click on the box and change the text colour to white so that it can be read out of the black (and to a certain extent, grey) boxes.

Double clicking on a graphics object will bring up this window, allowing you to enter positional and colour data.

Adjust Header and footer values in the Layout preferences

To number all your pages, you can include a special page number function on the master page. Chose Insert Item > Page Number from the menu, and a # symbol will appear. You cannot put this in a text object (as it will just appear as a hash symbol) so it must remain in the main text area.

To avoid the page number being obscured by text on the main page, edit the header and footer margins in the layout preferences, to leave enough space for the page number.

Real 3D Tutorial

Creating a hollow glass and contents

Many of the Real 3D demo pictures you may have seen show various pieces of glassware. This is mainly because Real 3D is excellent at modelling the optical properties of glass.

Making your own image can be a little tricky, so let's look at an example step-by-step. We'll create a simple tumbler, but you'll be able to adapt the technique to create wine glasses, lava lamps or anything.

1 Create a cylinder, and change the name to **OUTSIDE** to help stop you from getting confused. By default the cylinder is solid, which isn't much use as we want to make a hollow shape to hold liquid.

2 Copy the cylinder and change the name to **INSIDE**. Again, this is a solid cylinder. Use the Sizing tool to make it ever so slightly smaller, and then Move the object up so that it peeks out of the top of the **OUTSIDE** cylinder.

3 Make sure the **INSIDE** object is selected, then select **Operations/AND NOT** from the Modify menu. All going well, nothing will have changed. However, now you can delete the **INSIDE** object. Notice anything odd? The object still appears to be present - now press Right-Amiga and I and you'll see something odder still...

4 The **INSIDE** object has been used as a tool to hollow out the **OUTSIDE** object. Real 3D doesn't totally redraw the new shape, but has a stab at it. You'll need to render it in **LAMPLESS** mode to see what has happened. It doesn't look very exciting with this lighting level, but stick with it.

5 Let's add something. Firstly, make sure the default materials have been loaded. Select the **OUTSIDE** image, and make the material **Glass**. This makes our tumbler transparent. Now create another cylinder, and place it inside the glass. Alter the colour.

When you render this object, you'll notice two things. **6** First of all, rendering time has increased a heck of a lot! This is because calculating all the extra transparency effects takes a lot of time. Secondly, you'll notice that your glass is clear and you can see the liquid inside. You may want to experiment with finding a suitable material for the liquid - the default tends to look a little like blood (yuck).

part 7

More hints and tips for creating objects with Real 3D, courtesy of the very three dimensional **John Kennedy**

Creating a magazine

A magazine or book is very easy to create in Real 3D because you can load in the cover as a scanned image: that is, assuming you have a scanner or digitiser. If not you'll either have to scour CD-ROMS or PD libraries for suitable images, or load up a paint

program and give it a bash yourself. The technique can be adapted to include photographs or paintings which always add realism to a room scene. Of course there is nothing to stop you using a previously rendered scene as your starting image.

- 1** Scan in (or draw) your cover image. The more colours you can manage the better, but the resolution isn't quite so important - there is no point scanning a cover to 1024 by 1024 if your finished render will be 320 by 256.

- 2** Create an object in Real 3D. You can use a total two dimensional (flat) rectangle for a painting, but if you want to give your book or magazine depth, use a cube. Size it to as close to the right dimensions as possible.

- 3** Create a new material, and use the scanned image as the mapping. Stick to "Parallel", but play with the other settings if you want your magazine to look extra glossy or dull. The "Smooth" gadget gives a better finish, and selecting "Unshaded" is good for backdrop images.

- 4** Assign the object to have this material. Make sure to adjust the mapping (press v) and drag the line along the bottom edge from right to left. Try dragging the line elsewhere in the shape and see what happens.

- 5** Render the image in LAMPLESS to see that you have the mapping assigned correctly. For ultra-realism, you can create the magazine from a selection of flat rectangles - one for the front cover, one for the back and four for the edges.

The **essential** magazine for Amiga enthusiasts

Back to Basic

Continuing his series of *Blitz Basic* tutorials, **John Kennedy** explains how an Amiga program works and invites you to learn how to create your very own Web pages.

To make this Blitz tutorial a little more interesting, let's try to make a real program over the next few months. I'm sure you've heard of the World Wide Web, so let's start to write a program which can display Web pages on the Amiga.

Before we can get stuck into the HTML though, we need to know a little about how an Amiga program works. A program written in Blitz, or in fact any Amiga programming language, usually follows the same pattern:

1. Open a screen display
2. Open a window display on the screen
3. Perform actions
4. Shut down the window
5. Shut down the screen

SCREEN DISPLAY

The screen display is all-important, as it is the screen which determines the resolution of the display (the number of pixels wide and high) and the depth of the display (the number of colours it can display at one time). The screen can also be in a number of different modes: LoRes, HiRes, interlaced, super HiRes and so on. These modes effect the appearance of the display: remember, although a low resolution display is normally 320 pixels across, there is no reason why it can't actually be 640 pixels across with only 320 pixels showing at a time.

Once the screen is opened, a Window is

usually placed in it. Windows are at the core of the Amiga's user interface. Programs, messages and requesters appear in Windows, and each can operate individually. When you click on a gadget inside a Window, the program running there receives the instruction. The operating system knows which Window to send the instructions to, even if there are multiple programs running at once. Sometimes a program will open a Window on its own screen, sometimes it will make use of the Workbench display. If a program opens on the Workbench it is obviously limited to the settings of the Workbench screen and is unable to pick size, depth and mode for itself.

SCREEN TEST

Let's start by writing a program which will open a screen display, then open a window. It's also vital to know how to close them again - because if you don't do it, no-one else will. Each screen created consumes memory and if you are not careful you'll soon run out.

Creating a screen is achieved with the Blitz command SCREEN, and there are two versions. The first is shown on Table 1.

Here are some examples:

SCREEN 0.5, "My first screen"

Open a 32 colour low resolution screen (320 by 256) entitled "My first screen"

SCREEN 0.28

Open a 16 colour high resolution (640 pixels across) interlaced screen (512 lines high) with no title.

If you want to write a program to test these examples, base it on something like this (See **Tutorial List A**). The mousewait keeps the screen open so you can see it (click the mouse to close) and the CloseScreen stops us building up a large collection of empty screens.

This version of Screen is useful for creating a standard screen with no messages. Sometimes however, you require a little more control over how a screen is created. Table 2 shows what the second version of the screen command looks like:

Some more examples:

SCREEN 0.0,0,320,256,5,0, "More screens",1,0

Open a low resolution 32 colour screen in the left hand corner of the display, 320 pixels across, 256 pixels down. A title is given and normal pens are used.

SCREEN 0.0,100,640,256,2,\$8000, "Hires",1,0

Opens a 4 colour high resolution screen of 640 pixels across, starting 100 lines down the screen.

Continued overleaf →

SCREEN Screen number, Mode, [Title].	
Screen number	Each screen is given a number so you can tell them apart.
Mode	The number of bitplanes, which is a measure of the number of colours possible.
bitplanes	colours
1	2
2	4
3	8
4	16
5	32
6	64
	Add 8 to the mode for HiRes mode. (Only valid for bitplanes 1 to 4)
	Add 16 to mode for interlaced mode.
Title	Allows you to give the screen a title. This part is put in square brackets to indicate that it is optional - you don't have to have a title if you don't want one.

Table 1: Creating a screen - Version One

SCREEN screen number, X, Y, Width, Height, Depth, VMode, Titles, DPen, BPen, [Bmap number]	
Screen number	Each screen is given a number so you can tell them apart.
X	How far across the screen display starts
Y	How far down the screen display starts
Width	The width of the display in pixels
Height	The height of the display in pixels
Depth	The number of bitplanes (as before)
Vmode	A special value to control various aspects of the display. Pick as many as you want and add them together.
	value mode
	\$8000 HiRes
	\$200 ham mode
	\$20 super HiRes
	\$4 interlace
	\$0 lores
DPen	The special "pen" used for drawing details such as the title bar.
BPen	The Block pen for drawing any borders.
Bitmap number	An optional reference to the area of memory which the screen uses. A little advanced for the moment.

Table 2: Creating a screen - Version 2

← OTHER SCREEN COMMANDS

ShowScreen *screen number*

HideScreen *screen number*

This command will move the screen to the back of any other displays, and then move it back again.

BeepScreen *screen number*

Causes the screen to flash, as a way of gaining the attention of the user. Normally too irritating to use!

LoadScreen *screen number, filename [,palette]*

Load an IFF screen image from disk and display it in the existing screen. The palette is a special Blitz object we'll cover later.

SaveScreen *screen number, filename*

Save the current screen display to disk using the supplied name.

MoveScreen *screen number, X pixels, Y pixels*

Alter the position of the screen by the number of pixels stated. This can be used to move the display in a very smooth way, as you can see from this program (See Tutorial List B).

WbToScreen *screen number*

Assign the Workbench display a screen number, which means you can open windows and play with the normal Workbench display. Try this program for an example (See Tutorial List C).

OPEN THE WINDOWS!

Now that we have a display open, we can define and open a Window. We need to open the Window in order to print text and create a general display for our program inside it. You can display on the screen without a Window, but this way is usually best.

As you would expect, there are a large number of complicated commands for opening a Window. Here we go.

WINDOW *window number, X, Y, Width, Height, Flags, Title, DPen, BPen, [gadget list]*

Window number

As with screens, each window has a number associated with it. Remember you can have multiple screens open so you need some way of keeping track of them.

X

The X position of the top left hand corner of the new Window

Y

The Y position of the top left hand corner of

Width, Height

The size of the Window in pixels.

Flags

Some special values to control various aspects of the Window. As with Vmodes, the values need

to be added together to combine all the features. Some features are too horribly complicated to be dealt with in too much depth at the moment.

value	feature
\$0001	Allow the Window to be sized
\$0002	Allow the Window to be dragged
\$0004	Provide a depth gadget
\$0008	Provide a close gadget
\$0010	With
\$0400	and
\$0001	protect the right hand part of the Window from stray graphics.
\$0020	As above, but protect the bottom of the Window too.
\$0100	Open the Window behind all the others, almost as a fake screen.
\$0400	Look after all the Window borders to make sure they cannot be drawn on
\$0800	Open a Window with no borders
\$1000	Make the Window active when opened

Title

The name of the Window

DPen

The pen to be used for drawing details such as the title.

BPen

The pen to be used for borders.

GadgetList

A list of user-defined buttons to put in the Window

ACTIVE WINDOWS

Window 0,50,50,100,200,\$140f.

"Window Cleaners for hire",1,2

This opens a window 200 pixels wide, 100 pixels high, at position 50,50 on the screen. The Window is active with a full set of gadgets. When adding together the special flag numbers, remember they are in hexadecimal (base 16) and so a scientific calculator would come in very handy.

See Tutorial List D for the program you would need to write in order to see the window open. Notice the order in which everything is done:

1. Open the screen,
2. Open the window,
3. Print in the window,
4. Close the window,
5. Close the screen.

You must remember to close the Window when you have finished. If you don't, and then you close the screen. Very Bad Things will happen - you have been warned.

Here are some fun Window commands to keep you busy:

WPlot X, Y, colour

Plot a point in the active Window.

WBox X1, Y1, X2, Y2, colour

Draw a solid rectangle in the active Window. X1,Y1 is the top left edge and X2,Y2 the bottom right.

WCircle X, Y, radius, colour

Draw a circle of a given radius in the Current window.

WEllipse X, Y, radius1, radius2, colour

Draw an ellipse with the given radii in the Current window.

WLine X1, Y1, X2, Y2, [Xn, Yn], colour

Draw a line connecting the points

WCls[colour]

Clear the Window, to the optional colour if supplied.

There are plenty of other Window commands too, so make sure to use the Blitz on-line help facility to find them. Press Right Amiga and Help together for a full help screen. Try Tutorial List E and see what happens when you take Windows a little too far...

Sadly we have run out of time, and we still haven't got started with the HTML decoding yet. However, keep playing with the Screens and Windows and we'll be ready to get stuck in next month.

TUTORIAL LISTING

A; Example Screens in Blitz Basic

```
Screen 0,4,"My First Screen"
MouseWait
CloseScreen 0
End
```

B; Moving Screens in BLITZ Basic

```

to *Blitz User Magazine*

See for yourself!

~~RRP £34.99~~

**SPECIAL OFFER
£24.99**

It started life as a Coverdisk submission for *Amiga Format*, it ended up as a *Format* Gold winning commercial release from Audiogenic - written in Blitz.

A fast, smart, playable and gory *Doom* clone that made some people who played it feel sick. Already hailed as a trailblazing classic - written in, you guessed it, Blitz.

Praised by all, *Blitz Basic* is really the all in one single most useful development package for the Amiga - and now it's capable of even more impressive results, with improved editors and extended AGA features. Take advantage of this offer for the full, boxed software and ring-bound reference manual.

It's one of the whackiest, fastest, funniest, compulsive and most popular driving games ever on the Amiga - *Super Skidmarks* was written in Blitz.

THE FINAL WORD

I was both amused and saddened by the pro-UFO letter from Joanne Bishop (issue 79) concerning the "Roswell Slideshow" review in issue 77, and by AF's opposing response.

I can't quite agree with either viewpoint expressed. At 43, I am probably one of your older readers and hopefully pretty stable. Yet I have long been puzzled (not obsessed) by the UFO phenomenon. I

was a complete sceptic before 1963, when I was confronted by something I couldn't explain. I'm completely familiar with civil, military and "unusual" aircraft types and with what can and can't be explained by known man-made aerial devices, yet I have seen anomalous objects two or three times over the years since.

Interpreting these phenomena is a very subjective affair. It's likely there are SOME genuine mysterious occurrences and I'd equally subjectively say I now incline to the view that UFO-related phenomena are not "alien" but probably of malignant spiritual origin.

I'd take issue with Joanne over the Gulf Breeze episode. "Not proved fake" is indeed very far from being proved true, and in the Waters case, there were plenty of reasons to regard the story as being of questionable reliability. A friend of Waters, with no obvious reason to lie, actually claimed he had helped fake the photographs. Jim Schnabel's weighty book, "Dark White", which delves deeply into many famous UFO encounters and, importantly, into the way in which they were investigated, lists a number of other reasons for doubting the authenticity of the case.

Interstellar travellers visit earth in their converted ion-drive hubcap.

However, that isn't proof either. The pages of AF are supposed to be about Amiga-related issues, so unless UFOs turn out to be *Lightwave* objects projected by some advanced VR system. I don't see the subject going much further here. But I would just like to say before parting that I too felt slightly insulted by both Mr McGill's way of describing the 'believers' and by AF's response to Ms

Bishop's admittedly rather petulant letter. You claim to keep an open mind, but that wasn't what came over.

Should you print my letter, if Ms. Bishop and friends - or anyone else - have any firm evidence or first-hand experiences to recount, I'd really like to hear about it. Perhaps it would be possible for them to drop me a letter via AF? I'll certainly repay any forwarding costs you might incur. Keep up the good work on the best Amiga mag!

Steve Clark
Isle of White

Well, that just about wraps it up for UFOs. Hubcaps on bits of string or visitors from distant worlds? Cunning cinematography or psychic forces beyond our ken? Coincidence or magic - you decide, but whatever you think, don't tell us - the truth is out there, not in the AF letters pages (which are all obviously made up, as one helpful reader suggested - except obviously the one he sent us otherwise arrrrrrgh - fatal paradox error -++++random letter generator application failed result -127

order for the Disk-BBS to work, we need some people to write to us. If you want to join us or have a game you would like us to distribute - in AMOS, BlitzBasic or any other language the Amiga supports - write to me at the following address:

Stewart Priest
45 Thornwood Drive,
Thornwood, Partick,
Glasgow,
G11 7TT,
Scotland

P.S. Everyone at *Amiga Format* is welcome to join us too.

Well, alright, but this is the last time, or the advertising people will be getting very upset.

HELP ME IF YOU CAN

I own a Commodore CDTV with a keyboard and an Amiga external disk drive, I know it's old but it still works great. However, I have broken the mouse and cannot find anyone who stocks them. I've been advised my only hope is the second hand market. So do any of your readers have one they could let me have? The model is CD 1253 with a small round 4-pin plug.

Kate Mountford
Stoke on Trent

Cor, this is turning into the multi-coloured swap shop. If anyone wants to swap a CDTV mouse for a ridiculously coloured sweater and a bottle of John Craven's hair-dye, please write to us at the usual address.

NO CHRISTMAS IN FEBRUARY

Having recently purchased a printer I thought I would put printhead to paper.

Sorry its not one of those grovelling letters more to the point it's to complain of two niggling faults, one of which may have been put right?

First of all, why am I reading the December issue in November and the Christmas (Jan) issue in December. If you could print the corresponding lottery numbers for the future month that would be a different matter.

Now in the latest issue (79 Christmas 1995) you have dropped the month (January) from the cover, does that mean I will

actually be buying the Jan issue in January or will it be a case of back to the future with February on the cover?

The second niggler. Because of the above confusion could you please state the closing date for all future competitions.

S.P. Benton
West Midlands

Listen right - Christmas is when we tell you it is okay? Can't you read or something?

THE RETURN HOME

By Paul Jenkins

Drawn on an A1200 using DPaint IV.

GENESIS

By Gary Clement

This interesting image was created using Image FX, Vista and DPaint IV

MECHANICAL MENACE

By Anthony Simpson

DPaint IV and a lot of imagination helped create this.

Yes it does get confusing. Believe me, it is more confusing for us who actually work on the magazine. We have Christmas in October and Halloween in August. Since the magazine is now published 13 times per year, and because in the more orthodox calendar there are only twelve months, we have to invent something for the extra issue to be called.

So, since the inception of AFIST (Amiga Format Issue Saving Time), the 13th issue is known as Christmas. You still get January (albeit at the beginning of December) but from thereon in, the months begin slipping back by a few days until the next Christmas. Happily, if you live in New Zealand or somewhere, because of BST (British Shipping Time) you will probably get at least one issue in the year in the month stated on the cover. I hope that has cleared everything up for you.

Why, it's so simple a child of four could understand it (and if there are any four-year olds out there, can you please explain it to Scottie).

GREAT PAD

I am writing to all those A1200 owners who haven't got a CD³² joyypad. You don't know what you are missing. It's amazing when you're playing *Gloom* and you need to sidestep, no need to search for any keys just comfortably touch the joybutton and voila! Quite a few games are greatly enhanced with a

If you had a control pad and used the shoulder buttons, you could avoid scenes like this...

CD³² pad, so all you A1200 owners out there who haven't got one, get one. If more owners get a CD³² joyypad, more games will have the option and the gameplay will be greatly enhanced. Also all you programmers out there, try to include some options for a CD³² pad as many keyboard functions can be reassigned to the joyypad.

Scott Bridges
Kent

There are a number of games which do feature support for the joyypad - and you are right, some are much better.

NOISY NEIGHBOURS

SATURN OWNER: I've got a Saturn.

PLAYSTATION OWNER: I've got a Playstation.

AMIGA OWNER: Does anyone fancy a go on SWOS?

SATURN OWNER: I've got

Daytona USA.

PLAYSTATION OWNER: Pah! That's nothing! I've got *Ridge Racer!*

SATURN OWNER: Oh look, here comes the PC owner.

[Enter PC Owner]

PC OWNER: I've got *Doom*.

And *Heretic* too, that's good.

AMIGA OWNER: Fancy a go on *Gloom*, then?

PC OWNER: Oh, I've seen that. It's very blocky, isn't it?

The monsters look like cardboard boxes... Oh my! Is that the time? I should be editing my CONFIG.SYS and AUTOEXEC.BAT, trying to make Hexen work. It's really good though, even if I do still need to shell out another £300 to make it work. Goodbye.

[Exit PC Owner]

PLAYSTATION OWNER:

Goodbye. Hey, your Amiga is rubbish. I bet your Amiga can't handle three zillion million frames per second 3D animation with fifty six billion bit sound and tri-linear mip-mapping, can it?

AMIGA OWNER: No, but neither can yours.

PLAYSTATION OWNER: No... but what's so special about yours then?

AMIGA OWNER: Well... The Playstation doesn't have the capabilities for a Keyboard, Hard drives, Floppy disks, Modems, 3D modelling, Word processing,

Sound sampling, Scanning, DTP, Paint programs, printers AND they're easy to use...

PLAYSTATION OWNER: They're coming out next Autumn.

AMIGA OWNER: Give me strength.

[Exit Amiga Owner]

PLAYSTATION OWNER: What's a Hard Drive?

SATURN OWNER: I don't know.

[Pause]

PLAYSTATION OWNER: Our Joypad's better than your's.

There's a moral there somewhere. That just about wraps it up. Oh! No... On behalf of *Amiga Power*, would you kindly stop playing Worms so loudly. Wear headphones. Or don't play it. Tch, open plan offices, eh?

Oh, and what happened to Actual Reality? I have been reading since issue 30 and I remember with fondness the moment I flicked to the back of the magazine and read with amusement. It was amusing, entertaining, witty and er... funny!

Stuart Brown
Preston

Well, it's not Harold Pinter is it, but an amusing effort nevertheless. Amiga Power can suffer - we have to listen to them playing the tediously noisy *Marathon!*

THE PROS AND CONS

I was browsing through my brother's magazine (Issue 79) when I came across a review for *Citadel*. The little orange box caught my eye and to my horror I saw it criticise my beloved computer. The A500 is still a capable machine and many people are proud to own them. So in future I would like you to stop putting down my computer and have a go at the PC instead.

Laura Chappell
Bowden

I am writing on behalf of the people out there who are still on Kickstart 1.3 like myself. I have read many letters from people complaining that they cannot afford to upgrade their Amiga and that you should stop leaving them out on the coverdisks. The general response from AF, in my view, seems to be 'Unlucky mate, you've got to move with the times'. I understand that you have to look towards the future and supply coverdisks to those people, who are in the majority of the Amiga population, with workbench 2.0 or above. I think it would be in your best interest, so as not to lose some of your most devout followers, to offer a special price for Kickstart chips and possibly ROM sharers in your mail order section. This will enable people to join the throng of merry Amiga owners who have 2.0 or above.

Alexei Schreier
South Beds

I just thought I would write and tell my fellow Amiga Format readers what they are missing by not upgrading their machines.

I have just treated my A1200 to a Blizzard A1230-IV running at 50mhz. WOW! It makes all the difference believe me. *Alien Breed 3D*, *Fears*, *Sim City 2000* and of course programs such as *Final Writer* and *Pagestream* all run like a dream, and you should see the *Amiga Format Breathless* demo running at 1*1 pixel mode with a full screen. This is how Amigas should be, putting the rather sad PeeCee to shame.

So come on all you A1200 owners dig deep and upgrade, it's worth it in the long run and the future of our beloved Amiga may just depend on people upgrading. As for all the A500 and A600 owners it's about time you got an A1200 in the first place let alone an accelerator card for one!

Jonathan Taylor
Suffolk

Well I've finally done it! What you asked, I've finally upgraded my old and venerable A500 to an all singing all dancing A1200.

I was one of those sad people who was happy with the A500, it did everything I wanted and I could see no reason to change it but I was wrong. In every way the A1200 is a much better computer and I wish I had upgraded it sooner.

I have had a computer of one sort or another since the ZX81 first came out and they have all had one thing in common - they were

never expanded or upgraded and so were overtaken by faster and better equipment. This will NOT happen to the Amiga, it is a great computer, one that can continue to grow and survive.

So I urge every A500 user to upgrade now, then add the memory, add the CD drive, accelerate the machine and software support will return when manufacturers see increasing sales of machines.

R.G. McCarthy
Surrey

I've been an Amiga owner now for 6 years and for the last 2 years I've had an A1200.

After reading issue 80 (Jan 96) I totally agreed with what was said about accelerators and extra memory.

They are the way forward for the A1200. Sell your gold teeth, sell your mothers, sell a kidney, everyone who owns an A1200 must buy an accelerator.

If more A1200's have hard drives and accelerators and extra money then programmers will write software that will push the A1200 to the limit. Escom should and must sell the A1200 with a hard drive as standard, the A1200 + (if it happens) is a big step in the right direction.

A500's and 600's are well past their sell buy dates, everyone connected with the software side of the Amiga should concentrate on the A1200.

Dean Brookes
Derbyshire

SVAN • £27 • Animator

Animate your pictures with SVAN in a matter of seconds. No anim file building is used. For pictures with a lot of movement SVAN is as fast as Anim-7 animations. Everything changes between frames, every pixel and every colour. SVAN software is built with the following approach to programming in C language and assembler - the programmer works more and the Amiga less.

LCL Self-Tuition

INCLUDES LANGUAGE COURSES THAT SPEAK!

Totally comprehensive (each is a compilation of 24 programs with a book and manual, or equivalent except CD course which has 30) ...of excellent quality (eg. "LCL are the best for providing help in this area" AMIGA COMPUTING)with far too many topics to list, but some examples are:

CD MICRO FRENCH (Beginners - GCSE)

CD32 or Amiga with CD drive • 30 programs including film-like ones • Extensive speech • Actors talk to you in French & you reply • Top CD Music etc

MICRO MATHS (11 years - GCSE)

24 programs equiv • Algebra • Geometry • Trigonometry • Statistics • Arithmetic etc

MICRO FRENCH (Beginners - GCSE)

24 programs • Real speech • Graphics adventure game • Talking cartoon etc

MICRO GERMAN (Beginners - GCSE & Business)

24 programs • Real speech • Graphics adventure game • Business letter generator etc

MICRO ENGLISH (8 years - GCSE)

24 programs • Speak & Spell • Punctuation • Grammar • Literature etc

MICRO SPANISH (Beginners - GCSE & Business)

24 programs • Real speech • Graphics adventure game • Business letter generator (1Mb) etc

MICRO SCIENCE Physics, Chemistry, Biology (8 years - GCSE)

24 programs • Tuition • Practical experiments • Learning by pictures • Adventure game (1Mb) etc

PRIMARY MATHS COURSE (3-12 years)

24 programs • Tables • Add • Subtract • Divide • Multiply (Long & Short) • Fractions etc

MEGA MATHS (A level course)

24 programs • Calculus • Algebra • Geometry • Full-screen graphs etc

£5 OFF TOTAL FOR 2 COURSES, £10 OFF FOR 3, £17 OFF FOR 4 (All appropriate LCL Courses are National Curriculum compatible & run on all Amigae)

All courses are on floppy disk and cost £24.99, except CD MICRO FRENCH which costs £29.99.

No hidden extras like VAT or P&P. Cheques payable to LCL. Free catalogue. Trade enquiries welcome.

MARKET PLACE

APRIL 1996

AMIGA FORMAT COVERDISKS

A stunning collection of useful programs including the full *Scapemaker* program and the excellent *Fiasco*.

Top quality *Chaos Engine* tribute that's highly addictive. A previously unreleased, complete eight level game.

Alien Bash 2

Locate the prisoners, find the keys and blow the guardian to smithereens. **Steve McGill** can't get enough of it.

An eight level *Chaos Engine* clone with pace, verve, action, and big guns. You are a burly, power armour suited dude and the aim of the game is to rescue the prisoners.

In order to fulfil this altruistic task, your man must locate all the prisoners on each level, rescue them, find a key to reach the end of the level and blow the guardian to smithereens.

Along the way, there are monsters to be killed and money to be collected. When a monster is killed it's skull is normally collectable, and this counts as money. There's also money embedded in the walls around the levels which can be shot and then collected.

The money can be put toward buying power ups and extra weapons in the weapons shop. It can also buy extra health. So be judicious and

Taste the fire of my might missile launcher, end of level guardian.

Pass through the gates and face your destiny, Luke.

Only you can save the hostages from a fate worse than pork.

A tremendous month for the *Amiga Format* Coverdisk. Thank **David "Coverdisk King" Taylor** from sister magazine *Amiga Shopper* for the acquisition of *Alien Bash II* from Pixel Digital the 'Games Masters'.

A GAME PANEL BETTER THAN HAVE I GOT NEWS FOR YOU

From left to right:

WEAPON: Use key F4 or the second fire button on a two button joystick to cycle through the available weapon types: Plasma gun, rocket launcher, and grenade launcher.

POWER: Each weapon can be made more powerful through pick-ups and upgrading in the weapon shop at the end of each level. This icon lets you know the current power of the selected weapon.

PACKS: The number of rocket/grenade packs currently being carried.

LIVES: Number of lives left. Whatever you do, don't let this number reach zero or else you have to start again.

ENERGY: Starts off as two bars which you can see here. Three more energy bars can be bought as the game progresses. Makes your man bigger, harder, and cleverer.

CASH: Amount Collected. Collect as much as you can. The more cash collected the more formidable the power armoured hero can be made.

RUN, STOP, STOP OR I'LL RUN AND I'LL SHOOT

To cycle through the available weapons press F4 or the first four numeric keys. To increase or decrease the range of the grenade launcher use the up and down cursor keys.

Most important is the use of the function keys F1-F3. They affect the action of your man.

F1 No matter what your man was doing, as soon as this key is pressed he will stop dead when he shoots. He can still be rotated in all eight joystick directions.

F2 Run while shooting. This is handy when under fire from multiple enemies.

F3 If stopped, the man will stay stopped when firing. If he's running and fires, he will continue running. Can be very useful when the player wants to stop dead.

prudent about how you spend it.

Much of the appeal of *Alien Bash II* lies in exploration of the terrain and interaction with the environment. There are trips to be tripped, switches to be shot, secret areas to be accessed, and nasty things to be neutralised.

Using the rocket launchers and the grenades is

This little piggy is going to get blown away with my rifle.

great fun, especially when you're ready to finish a level.

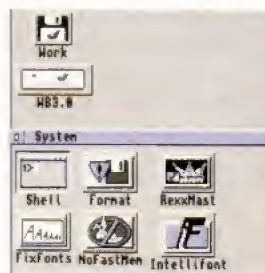

Of especial note is the choice of control toggles you have over your little armour suited bloke. If this method of control had been used for *Watchtower* (reviewed on page 36 of this issue), it would have been greatly improved.

Walking on stars triggers passages, but beware of ambush.

BACKING UP YOUR COVERDISK

Copying your Coverdisk is really very simple. Just follow the stages below...

1 Boot up with your Workbench disk and find the Shell icon, in your system drawer. Double-click on this to go into the Shell.

2 Type in the following line (with a zero, not the letter O), taking care to put the spaces in the correct places:

DISKCOPY FROM DFO: TO DFO:

3 When asked for the Source disk, insert your write-protected Coverdisk and press Return. All of the info on this disk will then be copied from the disk into memory.

4 Once your Amiga has read the info, it will ask for the Destination disk. Insert it and press Return. All information on this disk will be destroyed.

5 On an unexpanded machine, the Amiga may ask for the source disk again, because it copies in chunks. Finally, type **endcli** to close down the Shell.

DISK NOT WORKING?

We take every care to test the Coverdisk software, but Future Publishing cannot accept any responsibility for any damage occurring during its use. If your disk is faulty, send it back, including an SAE, for a free replacement to:

Amiga Format (insert name of disk)
TIB PLC
TIB House
11 Edward Street
Bradford BD4 7BH

SCAPEMAKER

This program can be used to convert images into Digital Elevation Maps for use in scene rendering and animation packages, such as *Vista*, *Vista Pro* and *Scenery Animator*. The program can load pictures in IFF format, but for more information on this see the Readme file.

Load the program and then select the LoadIFF item from the menu or button. Click on the region button and define the area of the picture you want to use, re-sizing the window as you want. Click on the close gadget and you'll go back to the main interface. Now click on the MakeDEM button and the program will convert the image. A greyscale preview will be shown. You can now save out the DEM file for use in other programs.

Of course there are many more options available. The Extrude option will convert a picture to positive heights like mountains, while the Carve option does the opposite and makes valleys. There is a scale factor slider which allows you to stretch the heights of DEMs. Inset mode allows you to combine two images into a single DEM file and smoothing allows you to graduate the difference between neighbouring heights. All the other options can be experimented with and shouldn't be too confusing.

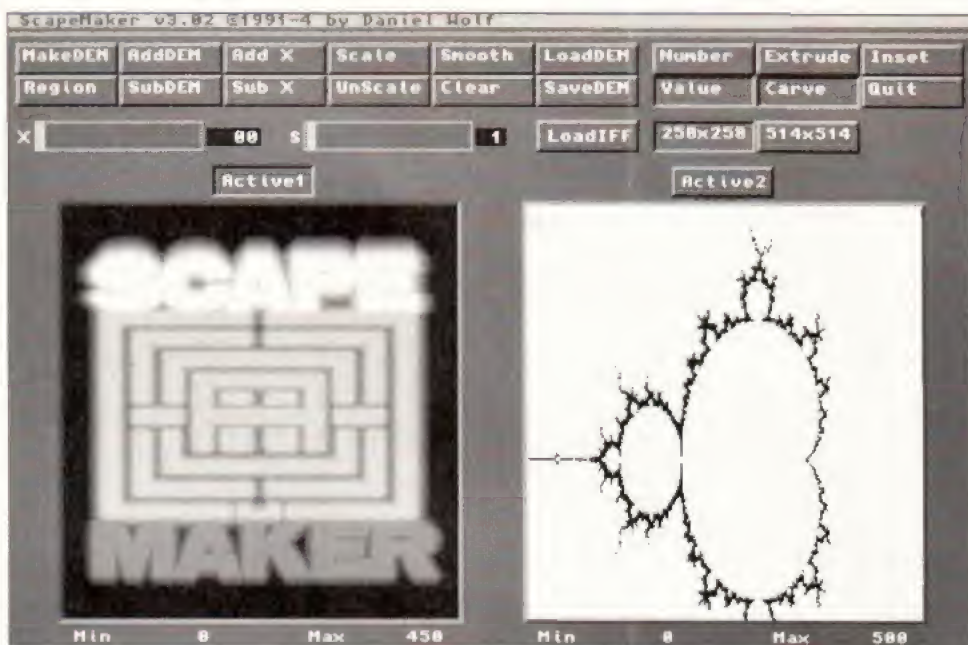

BREATHLESS UPDATE

Amiga Format has managed to obtain the file which will allow you to update the amazing *Breathless* game from version 1.0 to 1.1 – so you do require the original game. The update can be installed by double clicking on the installer icon. This uses the Commodore installer utility. If you don't have that, you can install it manually to the *Breathless* directory.

This update replaces the entire 3D engine that generates the game. It optimizes the frame rate by about 20%, adds mouse control and game configuration saving. It also adds improved keyboard controls, smooth up/down

Designing your own database is easy, even when using datatypes.

This month's disk contains a storming collection of programs that would have your Amiga's taste buds tingling, if it had any. **David Taylor** serves up.

ScapeMaker is the answer to *Vista* users' prayers. Convert any picture in IFF format into a 3D DEM file and load it into any package that uses DEMs. Simple to use, but very powerful.

looking, access codes for each level and auto-save of the last level code you reach as well as many more new features.

FIASCO 1.1

When this program appeared recently, we were mightily impressed. Sure, there are plenty of databases around for the Amiga, but one that gives you such amazing features and yet is designated Giftware by its generous author, was too good to be left unnoticed and so we have managed to fit it onto the disk for you to use. Remember that it is Giftware though and that you should send some token of appreciation to its author for all his hard work. You can find the

address in the documentation.

Using the program is very easy. There are details on the whole program within the documents, but it is very easy to set up your own database and design it yourself. First choose the Mask mode from the Control menu. You can now design the database.

Select the type of field that you are going to create from the Fieldtype menu item in the Field menu. Click the mouse at the position where you want the top left corner of the field to be and then press return. A requester will pop up asking you to set up the parameters for the field, such as a name for the field and the size you want it to be.

Breathless owners! An engine update for FREE!

ScapeMaker

Generate Lottery numbers and keep track of your numbers. Gamble! Gamble! Gamble!

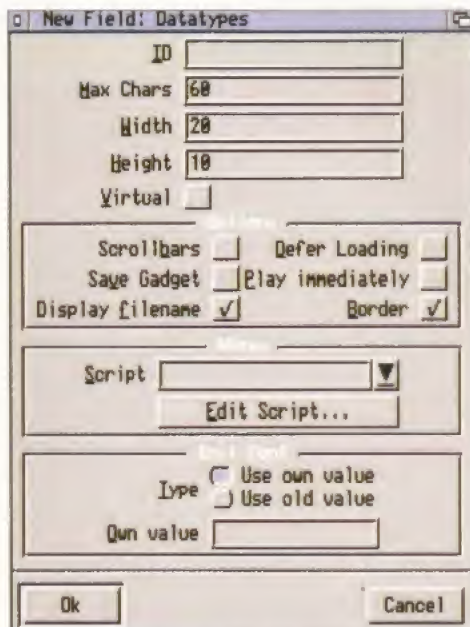

If your Amiga can use them, then datatypes can be used to insert pictures of most types and sounds.

The program can set up simple text fields, but it can be used for much more ambitious projects, using Arexx scripts or CLI commands as well as external programs.

Fiasco requires Workbench 2 and 1Mb of RAM, but works better on WB3 and especially on machines with a hard drive. Distribution is so large that we had to split it into three sections in order to fit it onto the disk.

Inside the main section is the main program and the English documentation in amigaguide format. The other files, such as the German docs and dvi files can be found in the other sections. This will mean that you'll have to move files if you want to install them in one drawer on the hard drive, although it should run fine if you just double click on the program.

You will need to install a library to the Libs: drawer on your Workbench disk - in order to see the library you may need to use the See All Files menu item from Workbench.

The field type requester allows you enter in the attributes for the field very easily.

INSTALLING THE SOFTWARE

The programs on this disk work on a variety of machines. The ScapeMaker program should work on any Amiga as should the XSize utility. The source code for Blitz can be loaded on any Amiga. The other utilities require WB2 and above. *Breathless* requires a minimum of an A1200 and *Fiasco* will work better on that system too.

In order to install the software, simply boot the Coverdisk and it will be done automatically. If you have a Workbench 1.3 machine, the programs will be de-archived to a floppy disk. WB2 and above owners can install to either 3 floppies or directly to a hard drive. All users must have pre-formatted empty floppy disks ready, if they want to install to floppy, before booting the Coverdisk.

ANALYSER

There are lots of Lottery analyser programs around, but this one offers loads of options within a compact program. It has a record of previous draws, which you need to keep updated. In addition to keeping track of the draws, you can use the program to predict numbers for you. In order to use the program, make sure you click on the Click Me Now icon first. The program is very simple to navigate and is designated Winware, which means that should you make a massive win on the Lottery, you should remember the author.

By the way, don't think that we condone gambling just because we've included this program. Gambling is a wicked sin. That's our pre-emptive strike against all of you who are going to write in complaining that we're trying to corrupt the youth of today.

BLITZ BASIC 2 CODE

In this directory, you'll find a calculator written in *Blitz Basic 2.1*, with the entire source code supplied by the author, David Howe. You can load the code into your Coverdisk version of Blitz from the AF81Coverdisk and adapt it and enhance it yourself. The executable version if the calculator can of course be used by anyone as a normal utility.

XSIZE

This small utility was fitted onto the disk at the very last minute as there was just enough space left. You can find the program on the actual Coverdisk, not on any of the de-archived disks.

This program should work on any version and is simply launched from Workbench. It allows you to resize any windows in any direction instead of just from the sizing gadget. This is done by holding down the left button or by using the hotkey (default Control). All the authors ask for is a postcard.

The database is designed in Mask mode using the mouse. Quick and easy.

Masses of options are available in *Fiasco*, and examples of different types of databases are included so that you can see some of the possibilities.

AMIGA FORMAT COVERDISKS

CAN'T GET YOUR DISK
SOFTWARE WORKING?
CALL
(MON-FRI 2PM-6.30PM)
0191 584 0682

EXTRA!

Your Coverdisk should be working fine, but if it's not, these hints, tips and corrections should sort out the problem quickly and easily.

INFONEXUS/DATANEXUS (AF76)

Apologies to readers who are still using Kickstart 1.2 since the programs will not work with your machine. Optonica are running a special offer on the full version of the software exclusively for AF readers. To find out more, contact them on 01455 558282.

REAL 3D (AF77)

If you find that the program will load fine from floppy but fails to load from your hard drive it is possible that the MaxTransfer Rate of your hard disk is set too high. To remedy this you will have to refer to the documentation that came with your particular hard drive.

DIGITA ORGANISER 2 (AF79)

Quite a few readers have reported problems when trying to install supplements. This is done by dragging the particular supplement file that you want from the Supplements Storage drawer into the Supplements drawer. You only drag across files not whole drawers.

WORMS (AF79)

The amount of telephone calls to the Coverdisk helpline about Worms suggests that many of you weren't very careful when decompressing this game. It is easy to ruin your Worms Coverdisk by not changing to a blank disk at the correct time in the procedure. The result is that Worms disk One is decompressed over the Coverdisk, losing the compressed Worms Disk Two file in the process. Before using any Coverdisk write-protect it first and then make a spare copy (if you don't know how to copy a disk see the box on page 115)

ZEEWOLF 2 (AF81)

Many readers have phoned in saying they are having problems with ZeeWolf 2. One meg A500 users who have two floppy disk drives should disconnect the external drive to make more memory available to the game. Unfortunately ZeeWolf 2 just doesn't seem to work at all with some accelerator cards.

ULTIMATE WORKBENCH UTILITIES (AF80)

If you are having trouble reading the documentation that accompanies the utilities it is likely that you don't have the tool that your Amiga looks for when you double click on a doc icon; e.g. Muchmore, Multiview, AmigaGuide etc. Or that these aren't set up properly on your Workbench. You can use a word processor or a text editor to read the docs, or use the program Ordering included in the collection.

GENERAL PROBLEMS

I often hear from people who have returned their coverdisks for replacements several times and are still meeting with the same problems. The most common are Read/Write or Checksum errors which occur during the decompression process. It is important to note which disk is in the drive when such errors occur - is it the Coverdisk or one of your own disks? If it's one of your own disks then that is the disk with the problem, not the Coverdisk. Did you format your blank disks correctly? Try re-formatting them and make sure that you do a full format not just a quick format, use the verify option and make sure you format from your Workbench, not from utilities like X-Copy, disable Directory Caching, Trashcan and International Mode.

Snap Maps offer

If you got issue 78's AF Coverdisk with our excellent selection of Snap Maps, you will no doubt be pleased to hear that you can now upgrade to the full version of the collections *Fields & Foliage* and *Building Materials & Fabrics* for either: (Tick appropriate box.)
 £76 each volume (without AF Coverdisk £99.95)
 £140 for both volumes (without AF Coverdisk £188)

Name

Address.....

Post Code

Send your order to:

Activa International
Produce House
1a Wickham Court Road
West Wickham
Kent BR4 9LQ.

Tel: 0181 402 5770
Fax: 0181 402 5780.

In issue 78 Graeme Sandford was so impressed by this collection of 3D modelling tools that he slapped a *Format Gold* on it. For £120 you get a whole range of high-quality objects that should have you rendering stunning scenes, from jungles to urban areas, in no time.

IF YOUR DISK IS FAULTY...

Please remember that the technical helpline above is purely for difficulties you have getting the programs to work properly. If your disk is physically damaged, bent, broken with a loose or missing shutter, it should be returned to Discopy Labs for a replacement at the following address:

AF DISK NUMBER XX
TIB PLC
TIB HOUSE
11 EDWARD STREET
BRADFORD BD4 7BH

This includes any system messages you may get saying: "Read/write error", "Disk invalidated" and "Checksum Error". In this case, the disk has been damaged and needs to be replaced.

GH is a family business established in 1955, supplying systems since 1982. With over £40 million worth of units supplied, and a quarter of a million happy customers, our trading record leaves others standing!

SO, HOW DO YOU DECIDE WHERE TO BUY YOUR AMIGA EQUIPMENT?

- That's the question we asked in a recent survey. When given a choice of ten categories, customer **TOP THREE** priorities were:
- No. 1 PRICE**
At GH you'll get the BEST overall deal... Look at our prices, compare them with our service, and you'll see we're Number 1 for **Months 1, 2 & 3!**
 - No. 2 SERVICE**
This is OUR No. 1 priority for YOU!
 - No. 3 PRODUCT CHOICE**
Everything for your Amiga. If it's not listed, just phone and tell us what you need!

HOW TO ORDER FROM GH...

- PHONE GH...**
We accept all major credit cards with NO TRANSACTION SURCHARGES.
- POST OR FAX...**
Please include your Name, Address and preferably a daytime and/or evening telephone number with your requirements. If using a credit card include its number and valid expiry date (and issue number with Switch card). Make cheques payable to GH (please allow 14 days clearance). Drafts or P.O.'s payable to Gordon Harwood Computers Limited.

GH PRICES...
Prices include VAT, at the standard rate of 17.5%, for all UK and EC customers. UK overseas Armed Forces Personnel may be exempt VAT - please ask for details.

DELIVERY...
We offer prompt shipment with fully insured express delivery options throughout the UK, Europe and Worldwide at a very modest cost. If ordering by mail, please call to confirm delivery charges.

GH WARRANTY...
Manufacturers' standard warranties apply or, at GH's discretion, a comprehensive extended warranty. Please ask GH for full details.

Whilst our standard warranty cover is comprehensive, we also offer enhanced and extended warranties too. If you require a fast collection service for minimal down time... ask for details then choose an option that suits your particular needs best. Our 'Gold Service' is priced from as little as £10!

Lifetime Warranty Plan for equipment used at Home (ie not on commercial premises)... Add an extended warranty to any hardware from GH. Take up to 5 yrs cover and at the end of that period extend again on an annual basis. You get a lifetime peace of mind. Schemes even cover for accidental damage as well as break down. Fully transferable should you wish to sell your equipment so enhancing resale values. Even available on certain hardware purchased elsewhere. Please GH for details.

Manufacturers' specifications and GH prices are correct at time of going to press. However they may fluctuate and we therefore reserve the right to amend them - confirm prices before ordering. This advertisement is an invitation to visit - not an offer to sell. Goods are not supplied on a trial basis. All transactions are subject to Harwood's Terms and Conditions of Sale, a copy of which is available on request £50.00.

VISIT THE GH SHOWROOM...
where our massive range of Amiga hardware, software and accessories are all available 'OFF THE SHELF'!
We're open Monday to Saturday 9.00am until 5.00pm

HOW TO FIND US...

VISIT OUR SHOWROOM...

ALL PRICES INCLUDE VAT AT 17.5%

If you can't visit us personally, why not ask for an Application Pack for a convenient, flexible **GH BUDGET ACCOUNT CARD**. No deposit and repayments over convenient periods can be arranged by mail. Once established, you can purchase with your new card and leave existing credit card limits intact!

We supply all Government and Education Departments along with Major PLCs. Call GH now for a rapid response to your Quotation requests!

Why don't you use our new... **GH EMail Internet address gharwood@eworld.com**

For your protection all Credit Cards are Security Checked
